JARC / HELPDESK

Prototype views and label reference

32 SCREENSHOTS

A visual reference for the Requestor, Admin, and Developer workspaces, including ticket submission, review, meetings, project planning, delivery acceptance, release, closure, and change requests.

How to use this guide

Each screenshot has its view name and a short explanation of the visible fields and actions. The contents pages point to the matching reference sheet. Some long detail panels show the visible portion of the drawer; companion sheets and label notes cover the remaining workflow actions.

Prototype context

Captured from the running JARC Helpdesk prototype using isolated demonstration data. Role switches preview behavior; they are not authenticated accounts. Developer preview uses Miguel Santos and Requestor preview uses Adriane Venzon. No email, calendar, shared database, or production integrations are connected.

Workflow

Submit > Review > Assign > Confirm requirements > Create project > Develop > Test > Requestor acceptance > Release > Close. Scope changes follow assessment, requestor agreement, admin approval, implementation, acceptance, release, and closure.

Admin | Ticket workspace

LABELS & ACTIONS

New request creates a ticket. Main table and Kanban board switch layout. Search records and Filter status narrow the list. Status shows workflow stage; Priority shows urgency; Assignee is the developer; Target date is the planned date; Progress is completed project tasks.

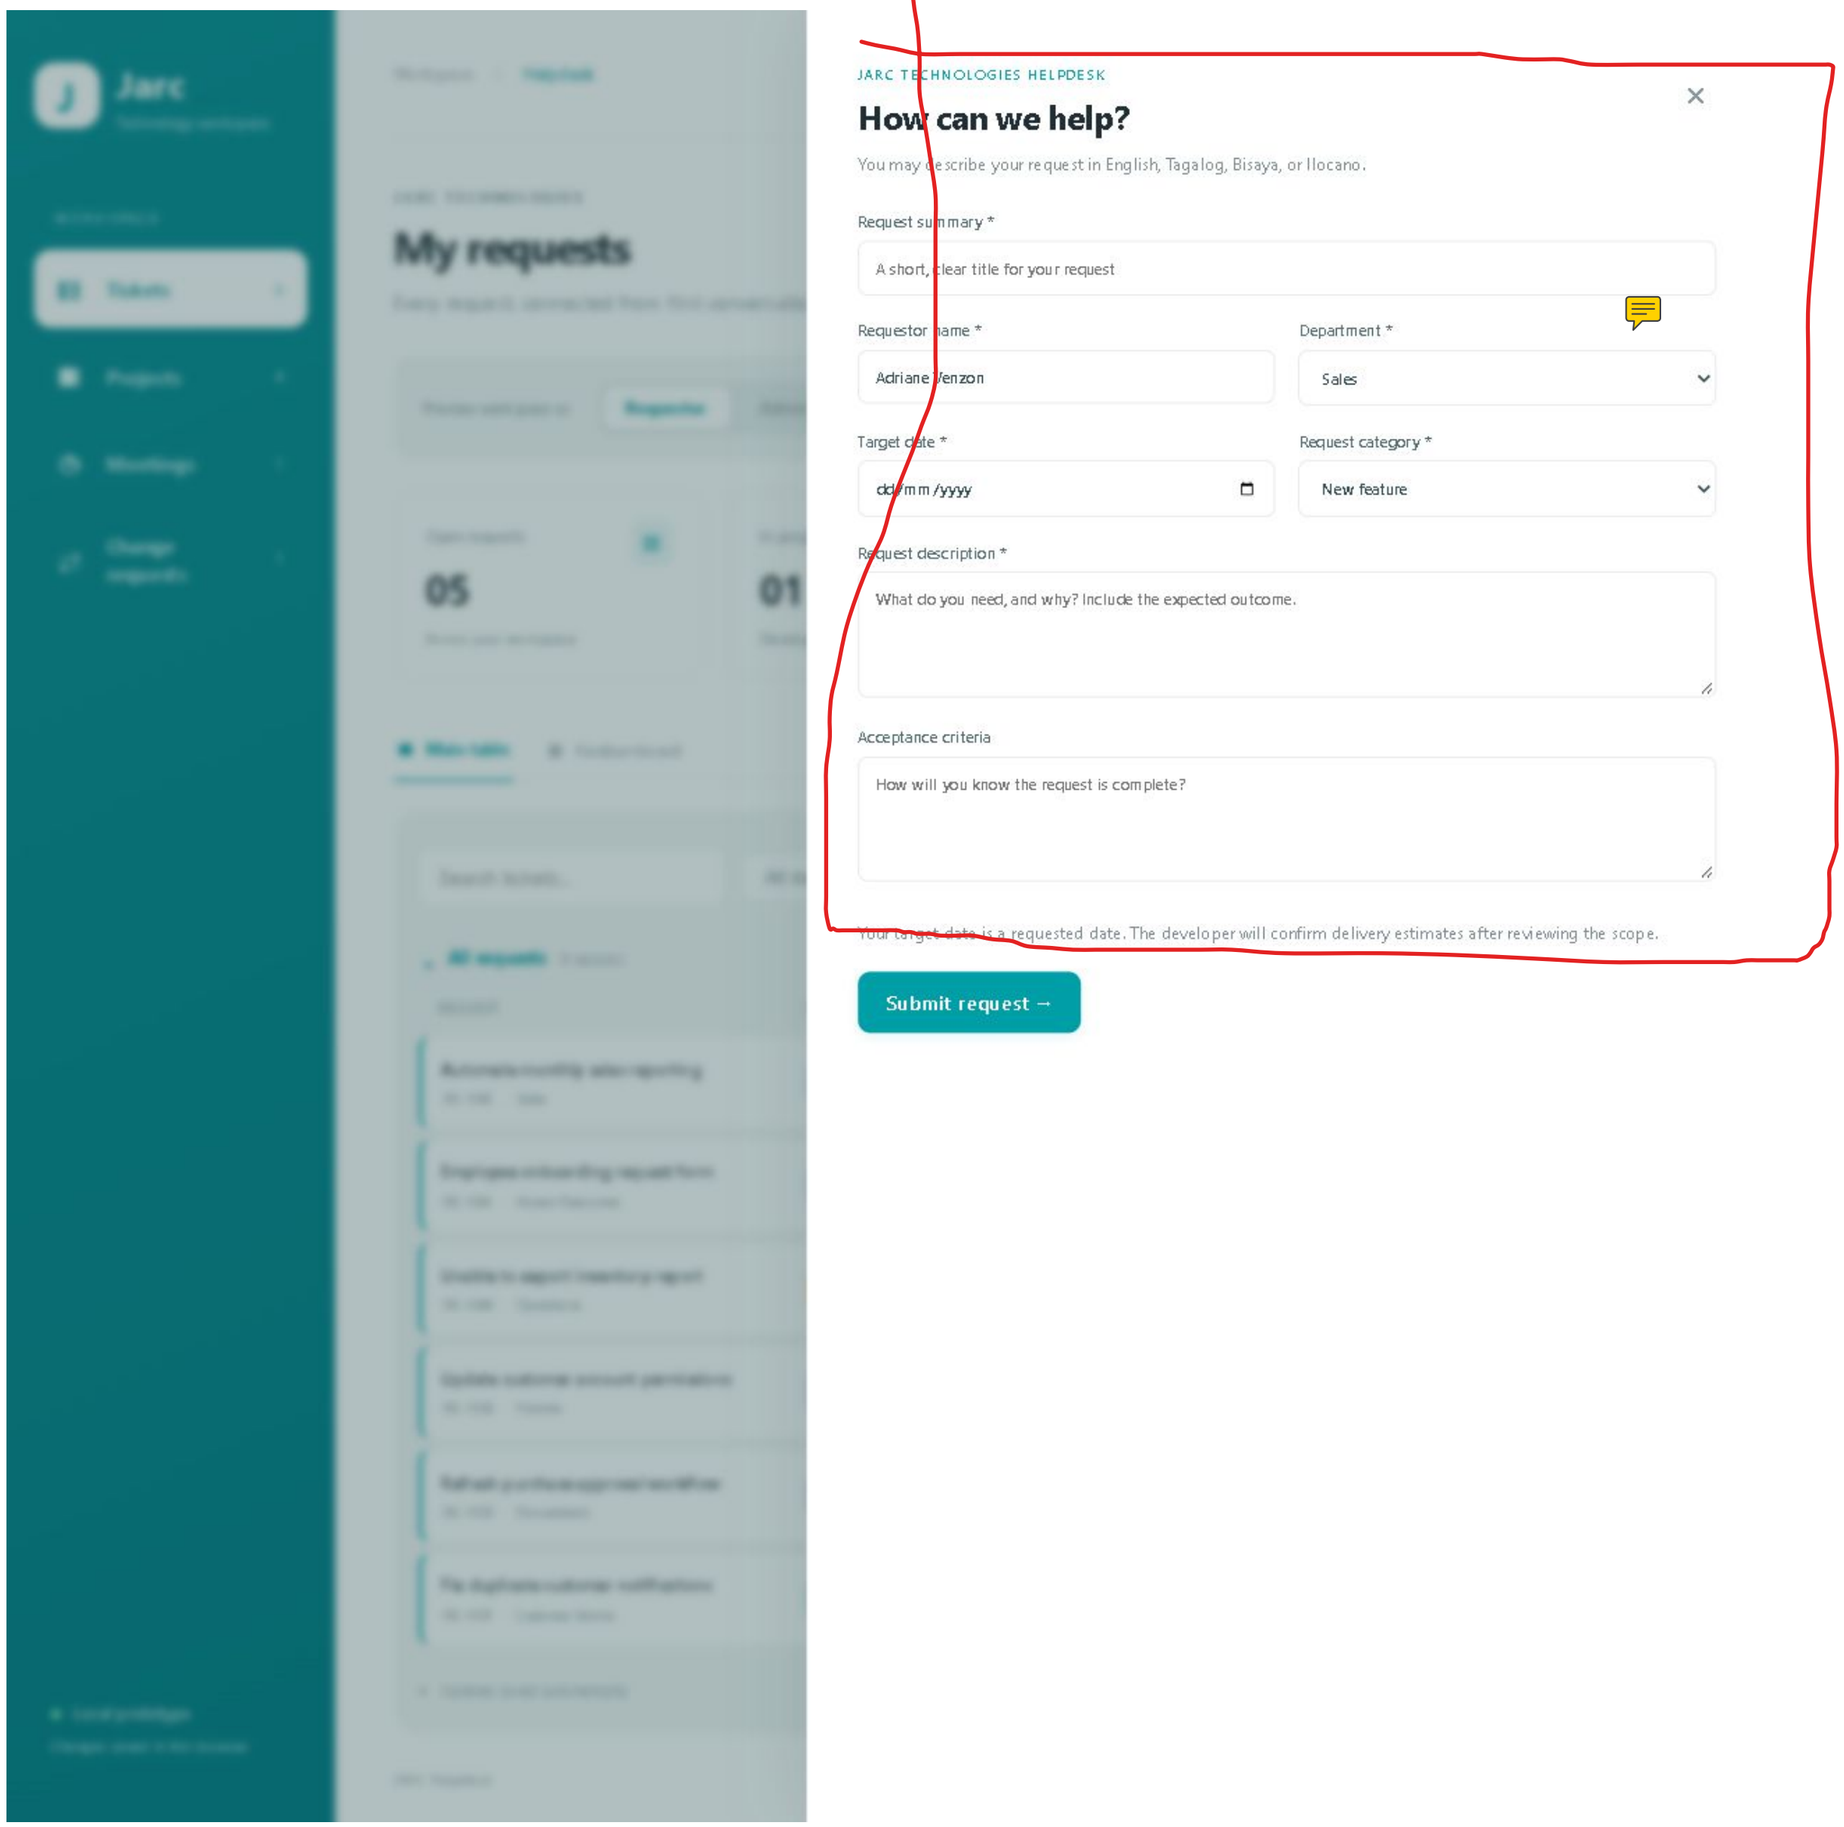

Requestor | My requests

LABELS & ACTIONS

Requestor is the demo role. My requests lists submitted tickets and their current progress. Open requests excludes closed, rejected, and cancelled records. Awaiting acceptance identifies deliveries needing requestor review.

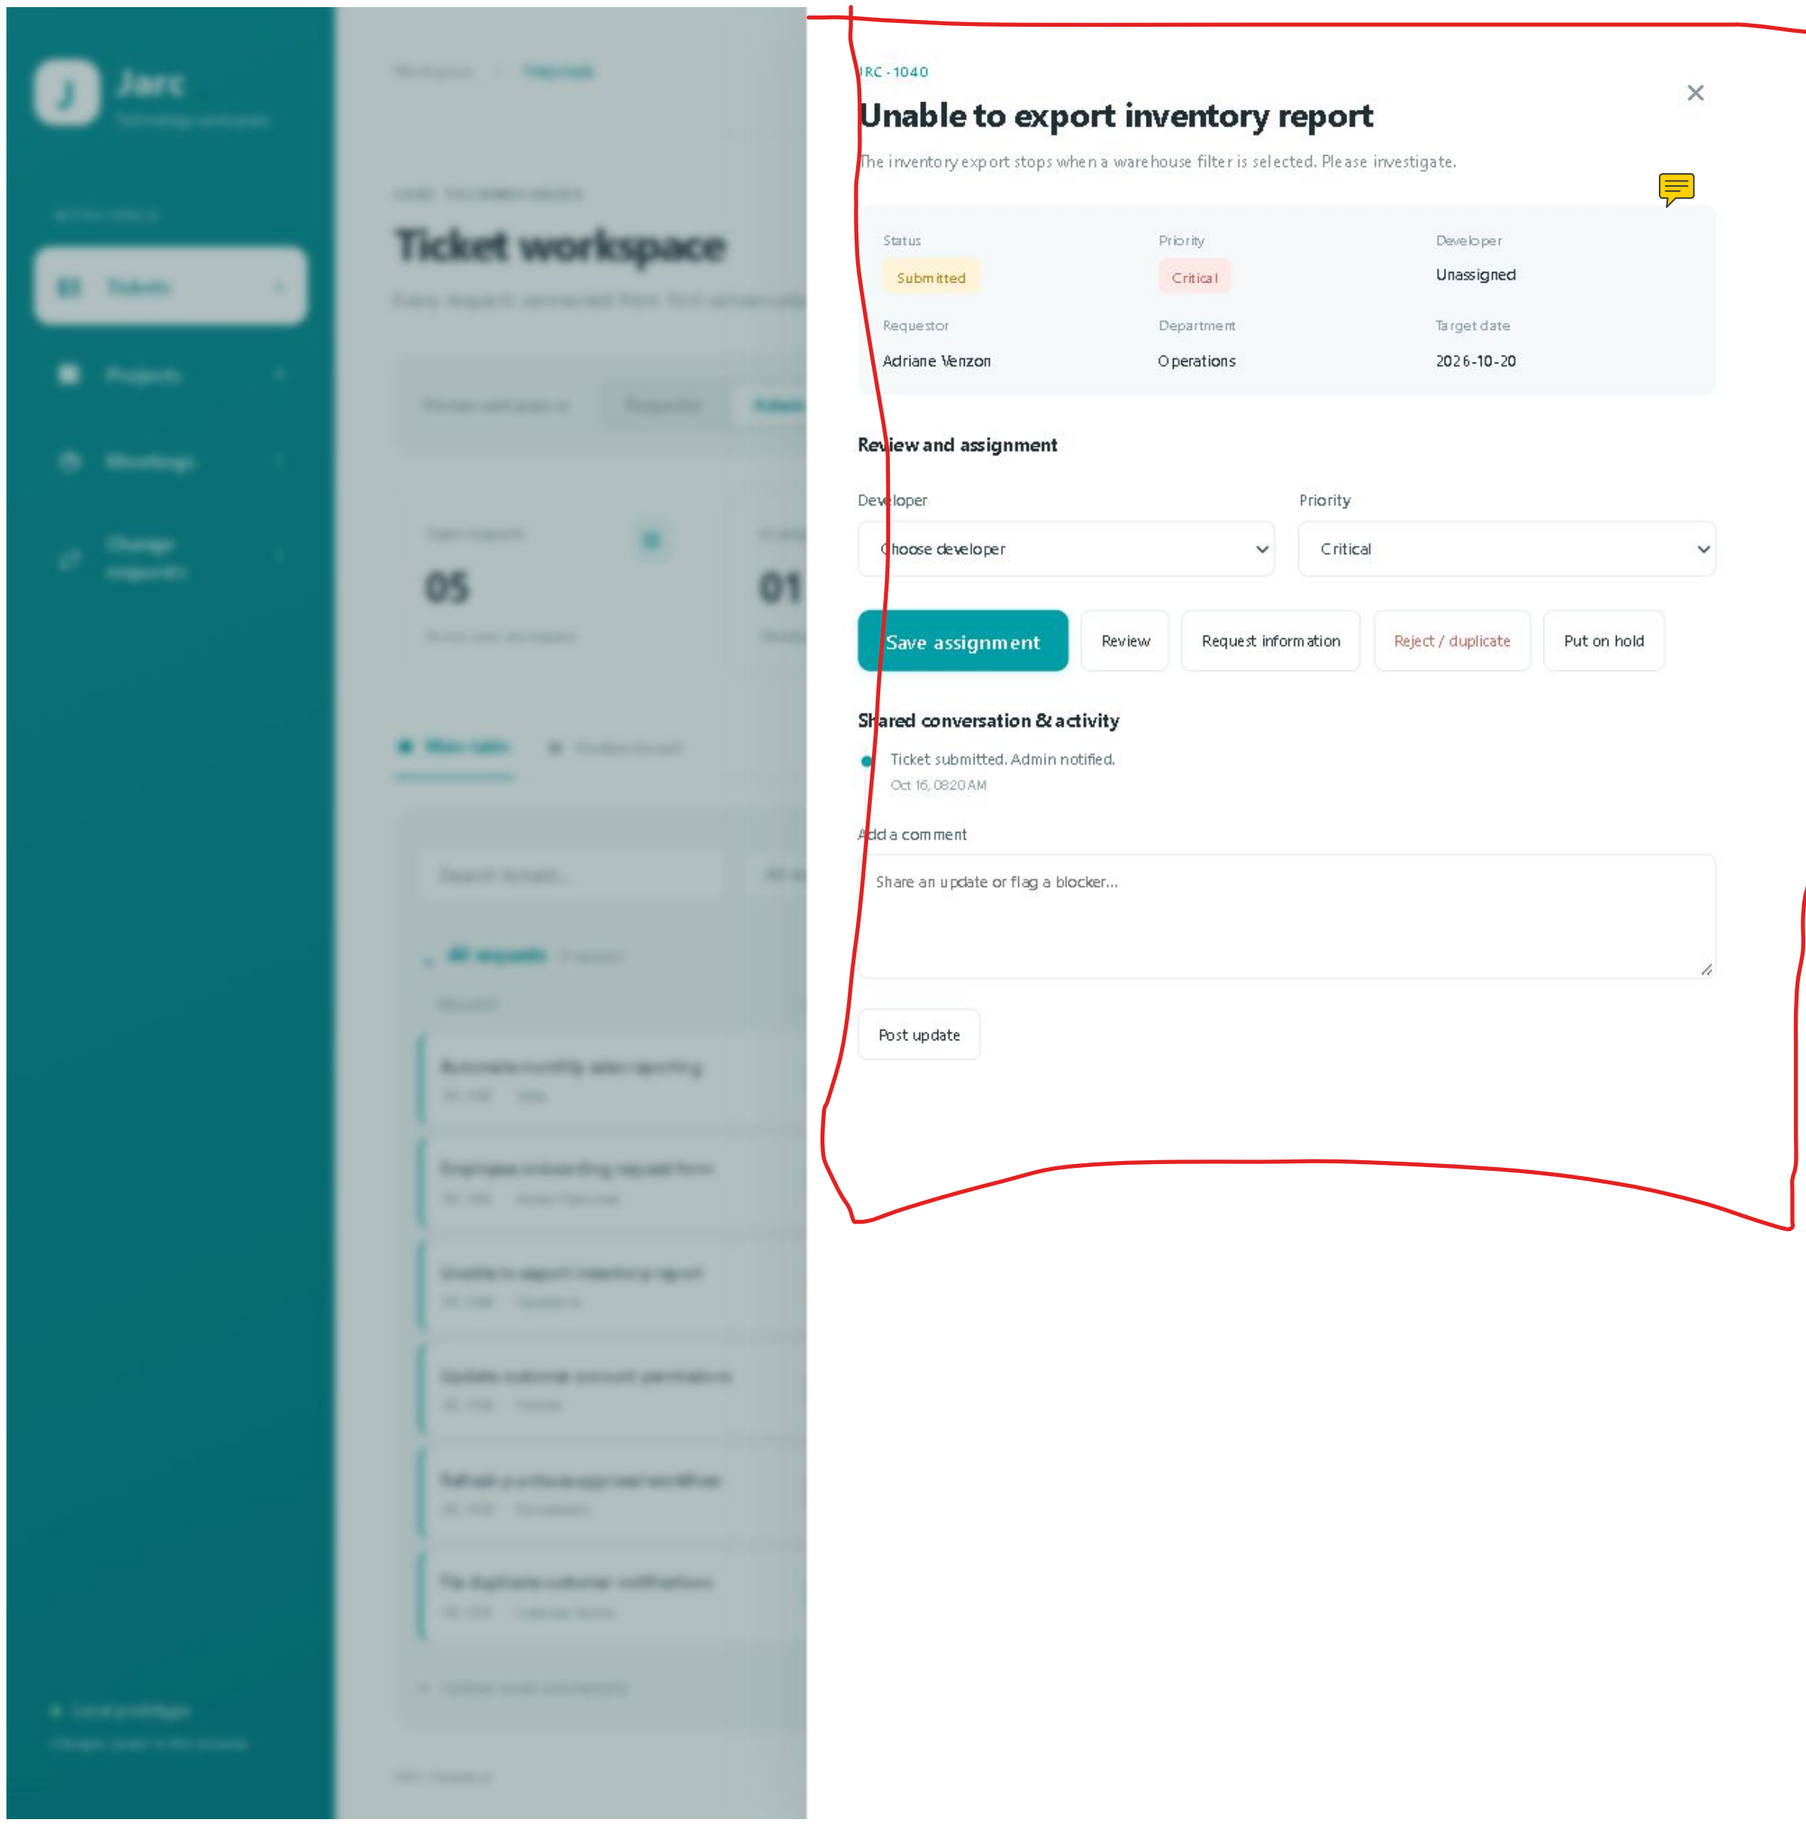

Requestor | New request form

LABELS & ACTIONS

Required fields: Request summary, Requestor name, Department, Target date, and Request description. Request category classifies the request. Acceptance criteria describe the expected result. Submit request creates the ticket and notifies admin.

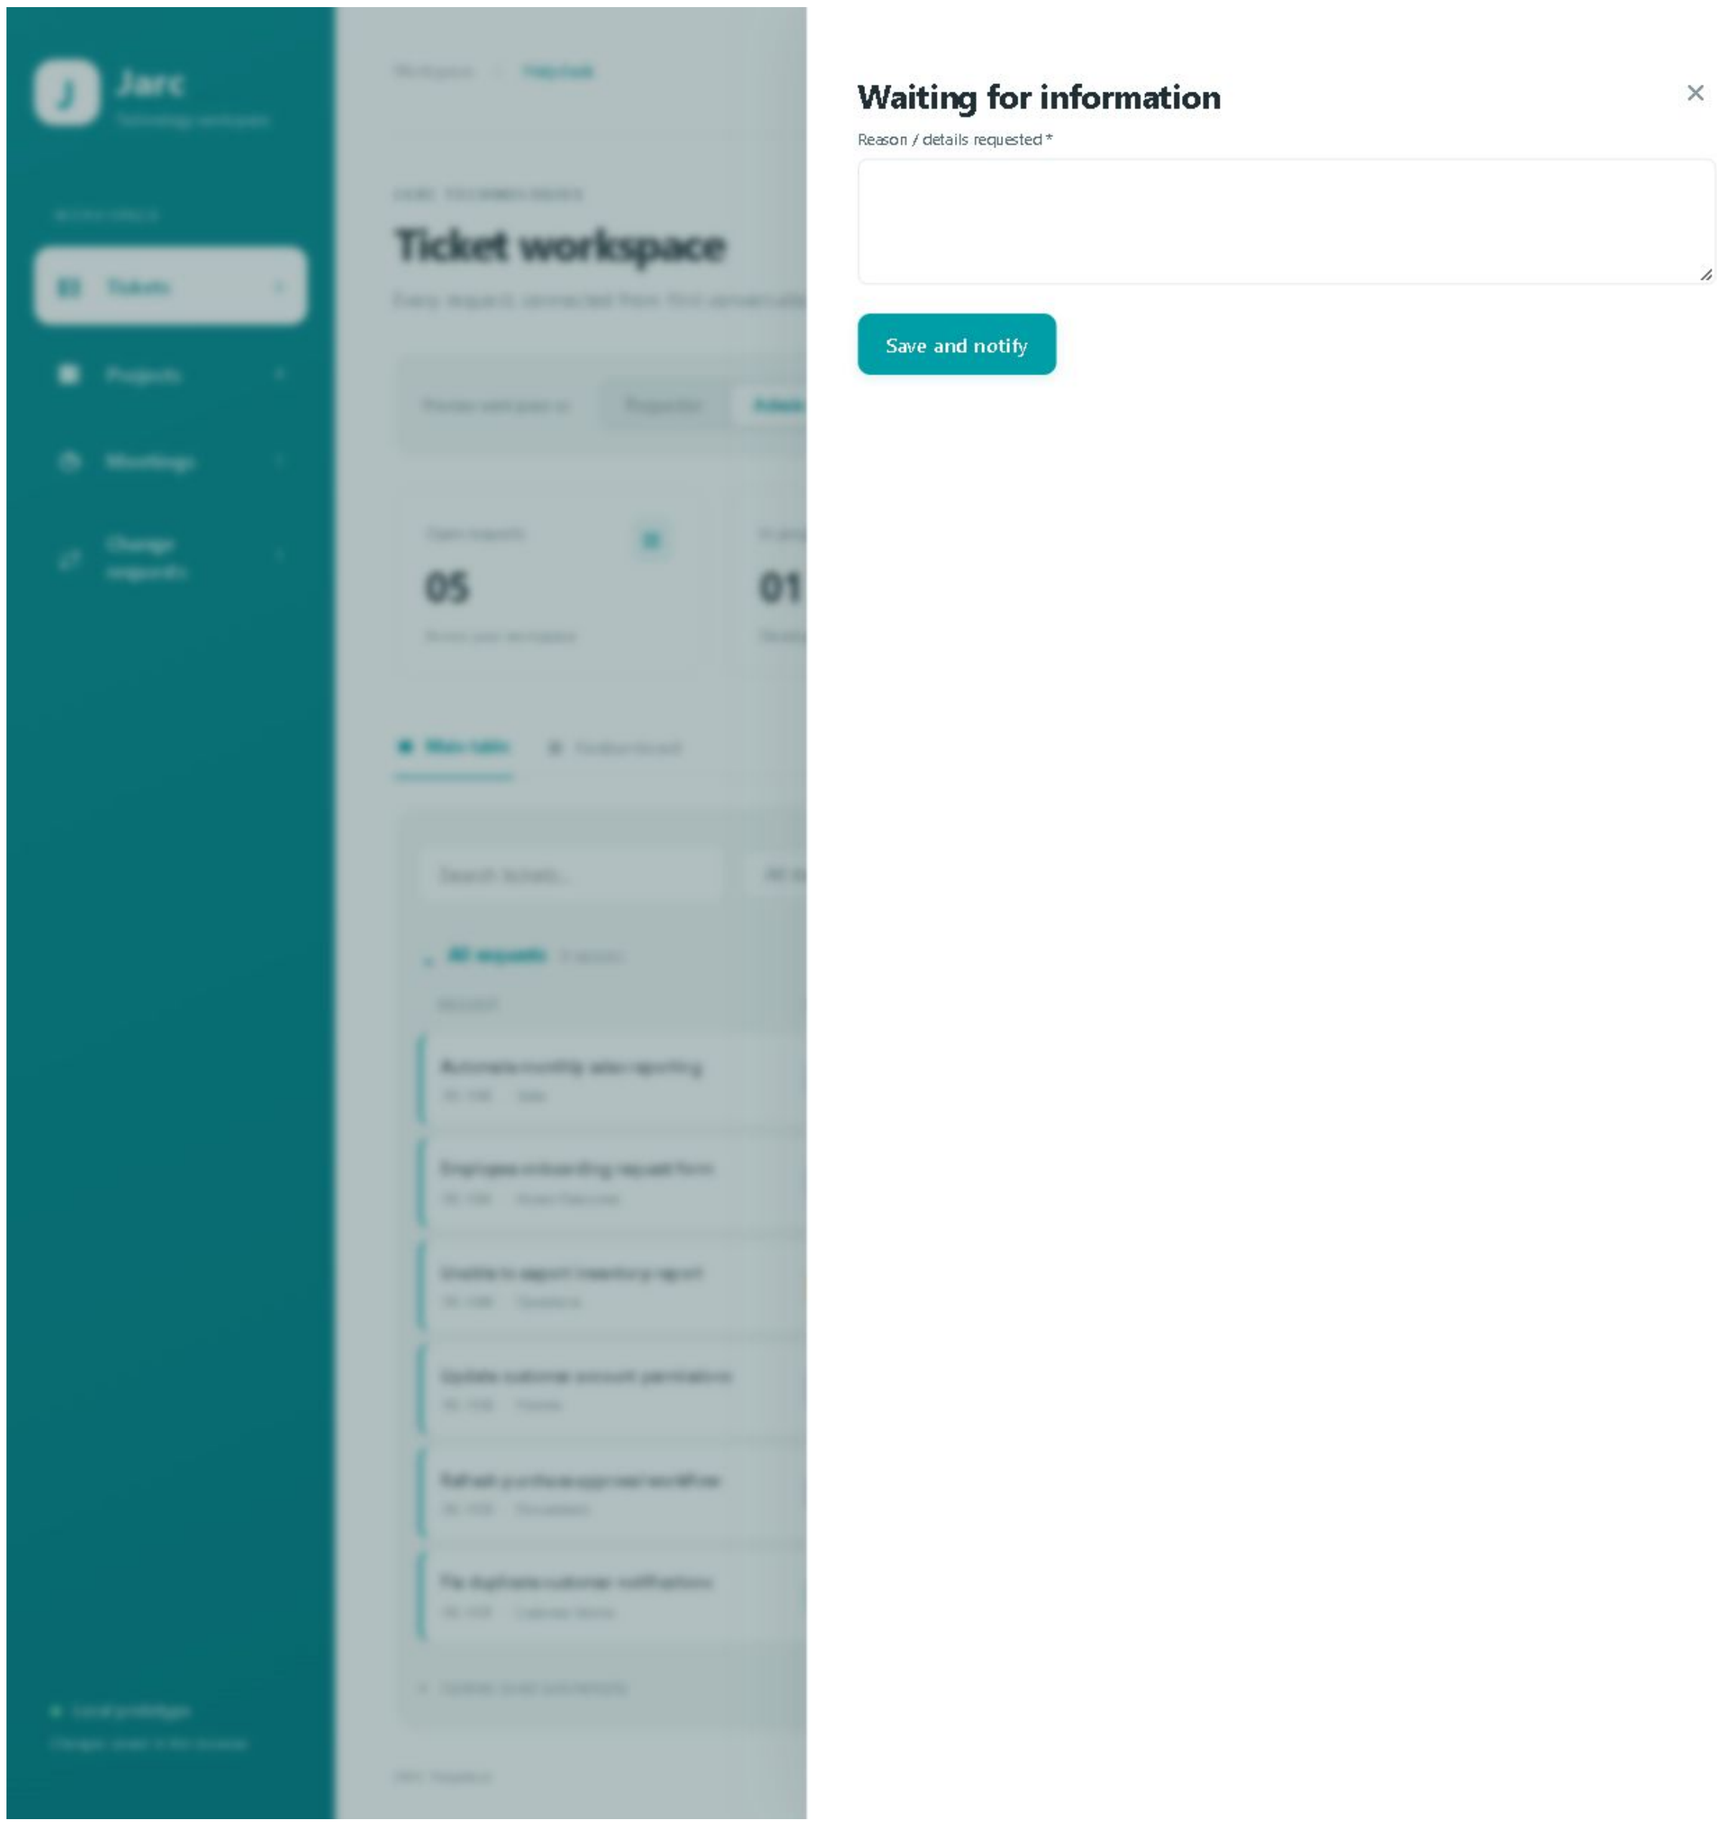

Admin | Review and assignment

LABELS & ACTIONS

Developer selects the owner. Priority defines urgency. Save assignment routes work to the developer. Review starts triage; Request information returns to the requestor; Reject / duplicate records a reason; Put on hold pauses affected work.

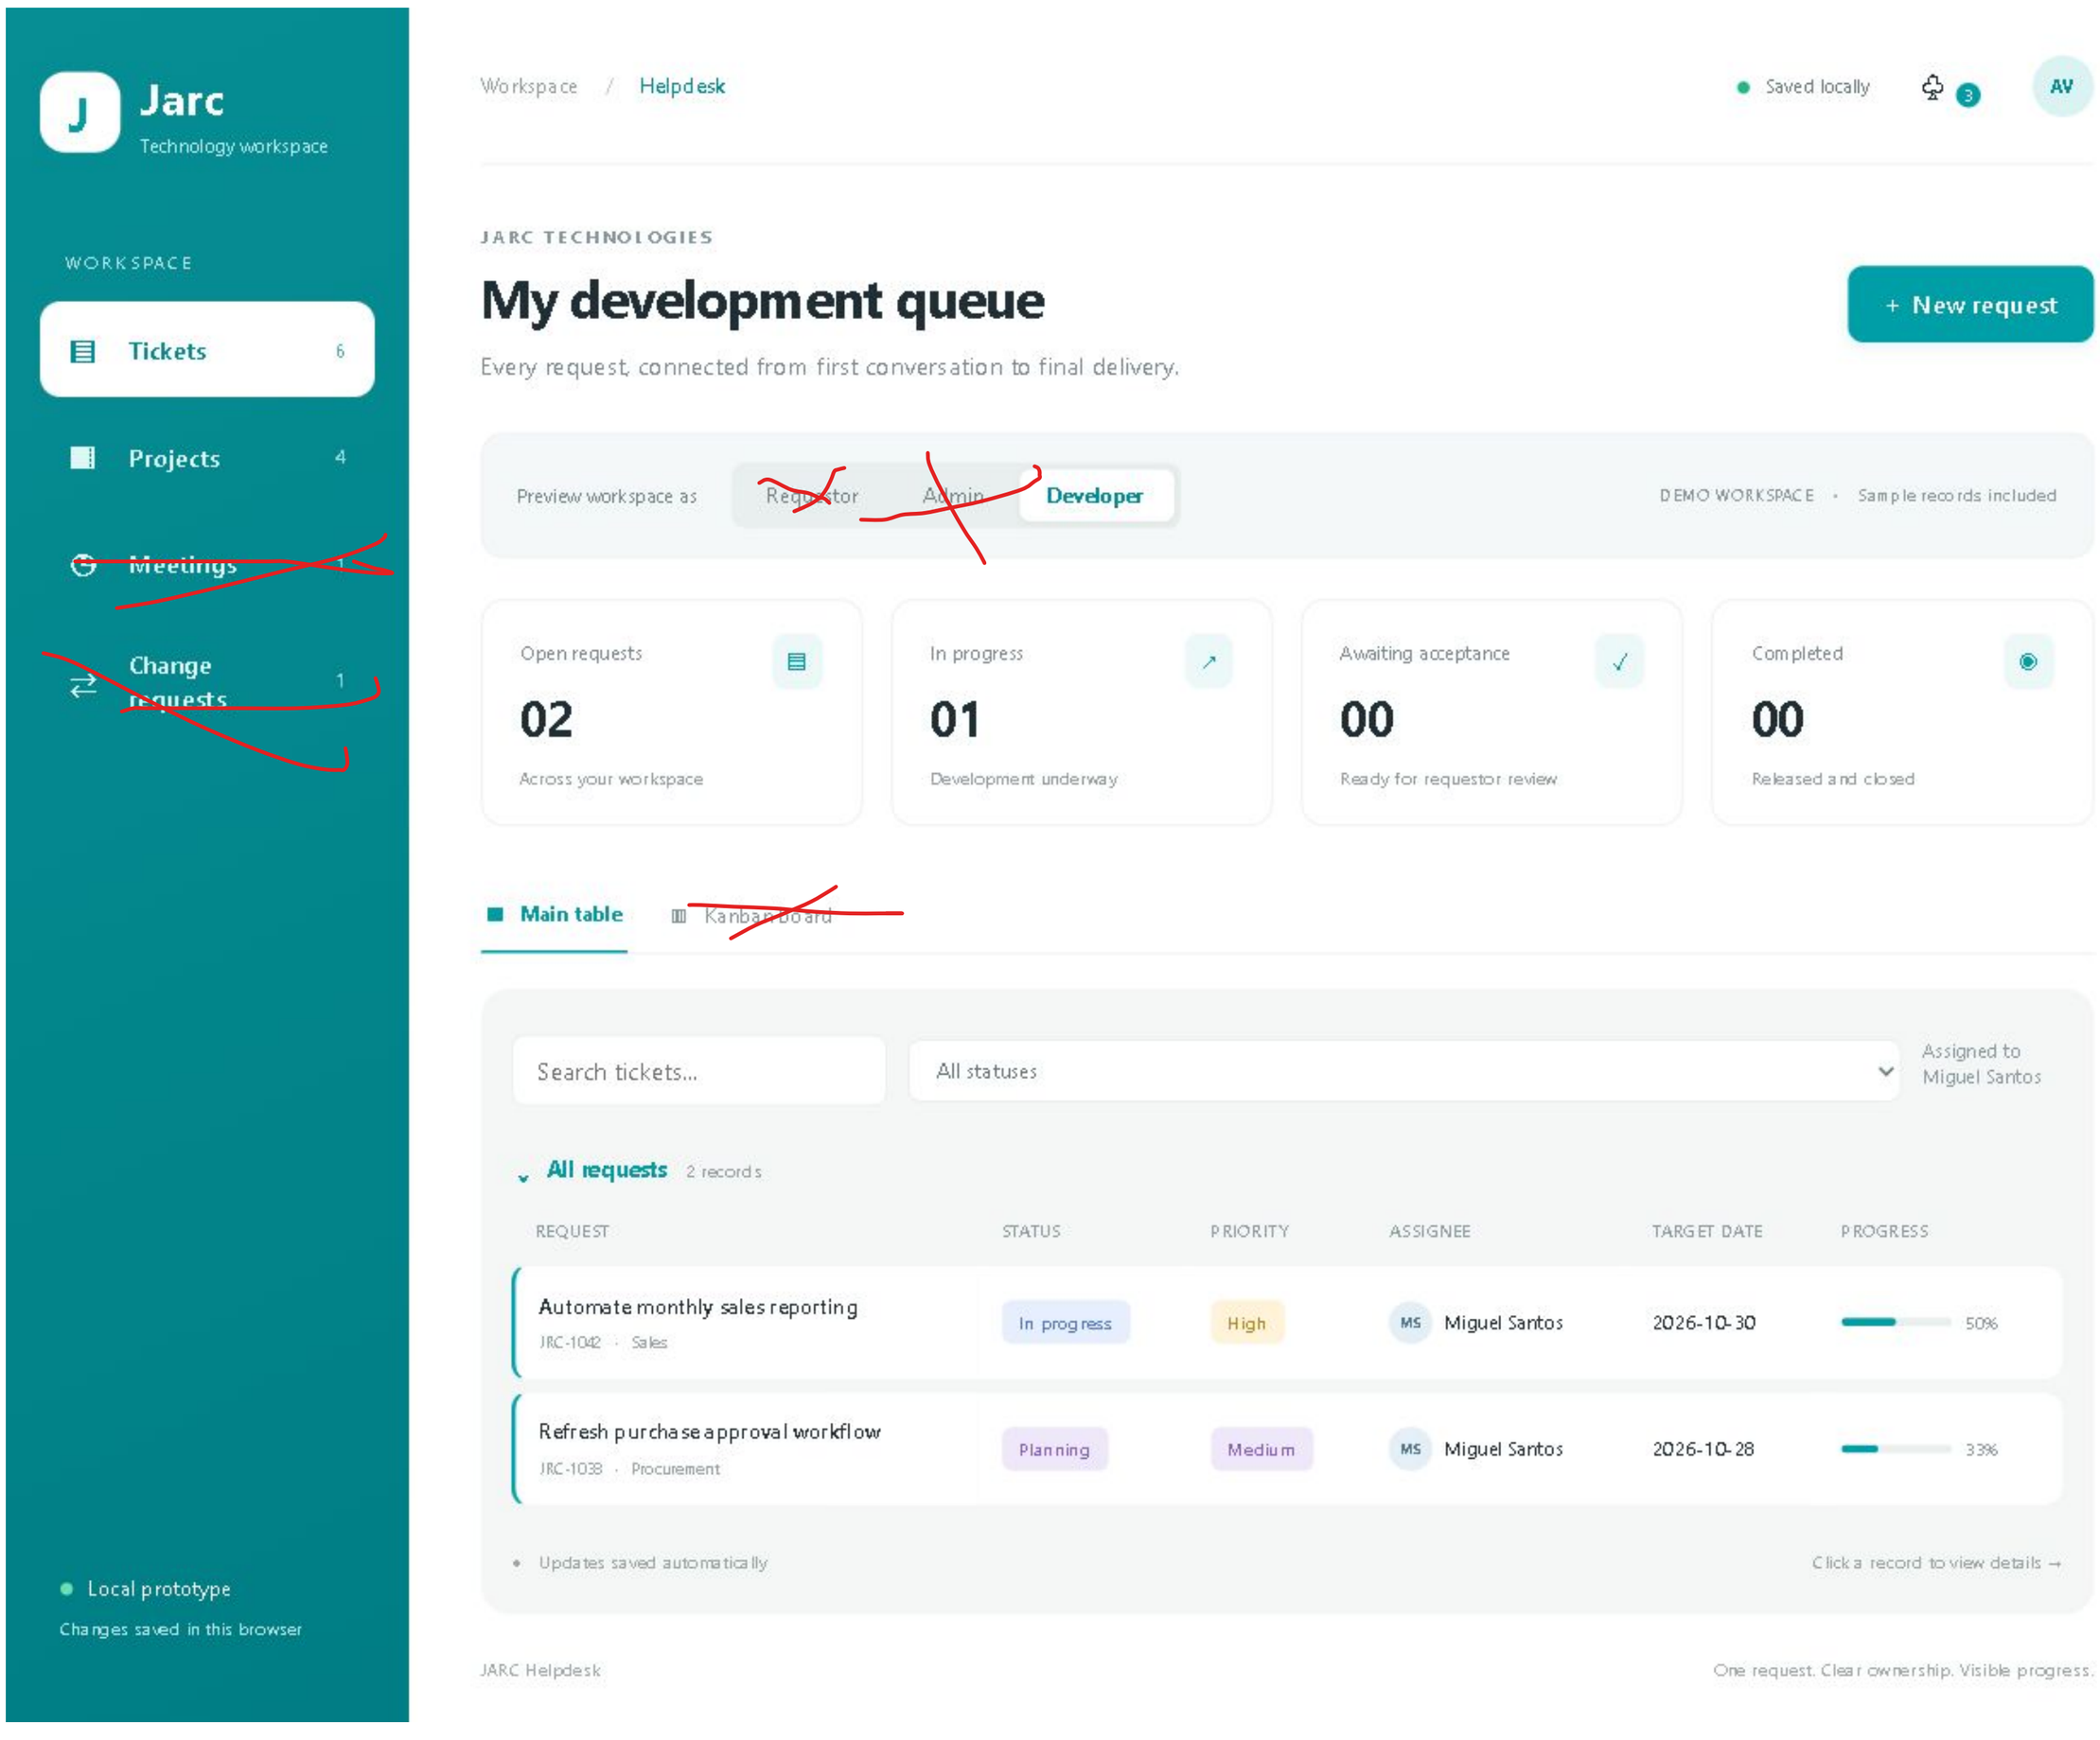

Admin | Request information or record a reason

LABELS & ACTIONS

Reason / details requested is mandatory. Save and notify records the decision and creates an in-app notification. Rejection, holds, and return-for-correction use a similar reason form.

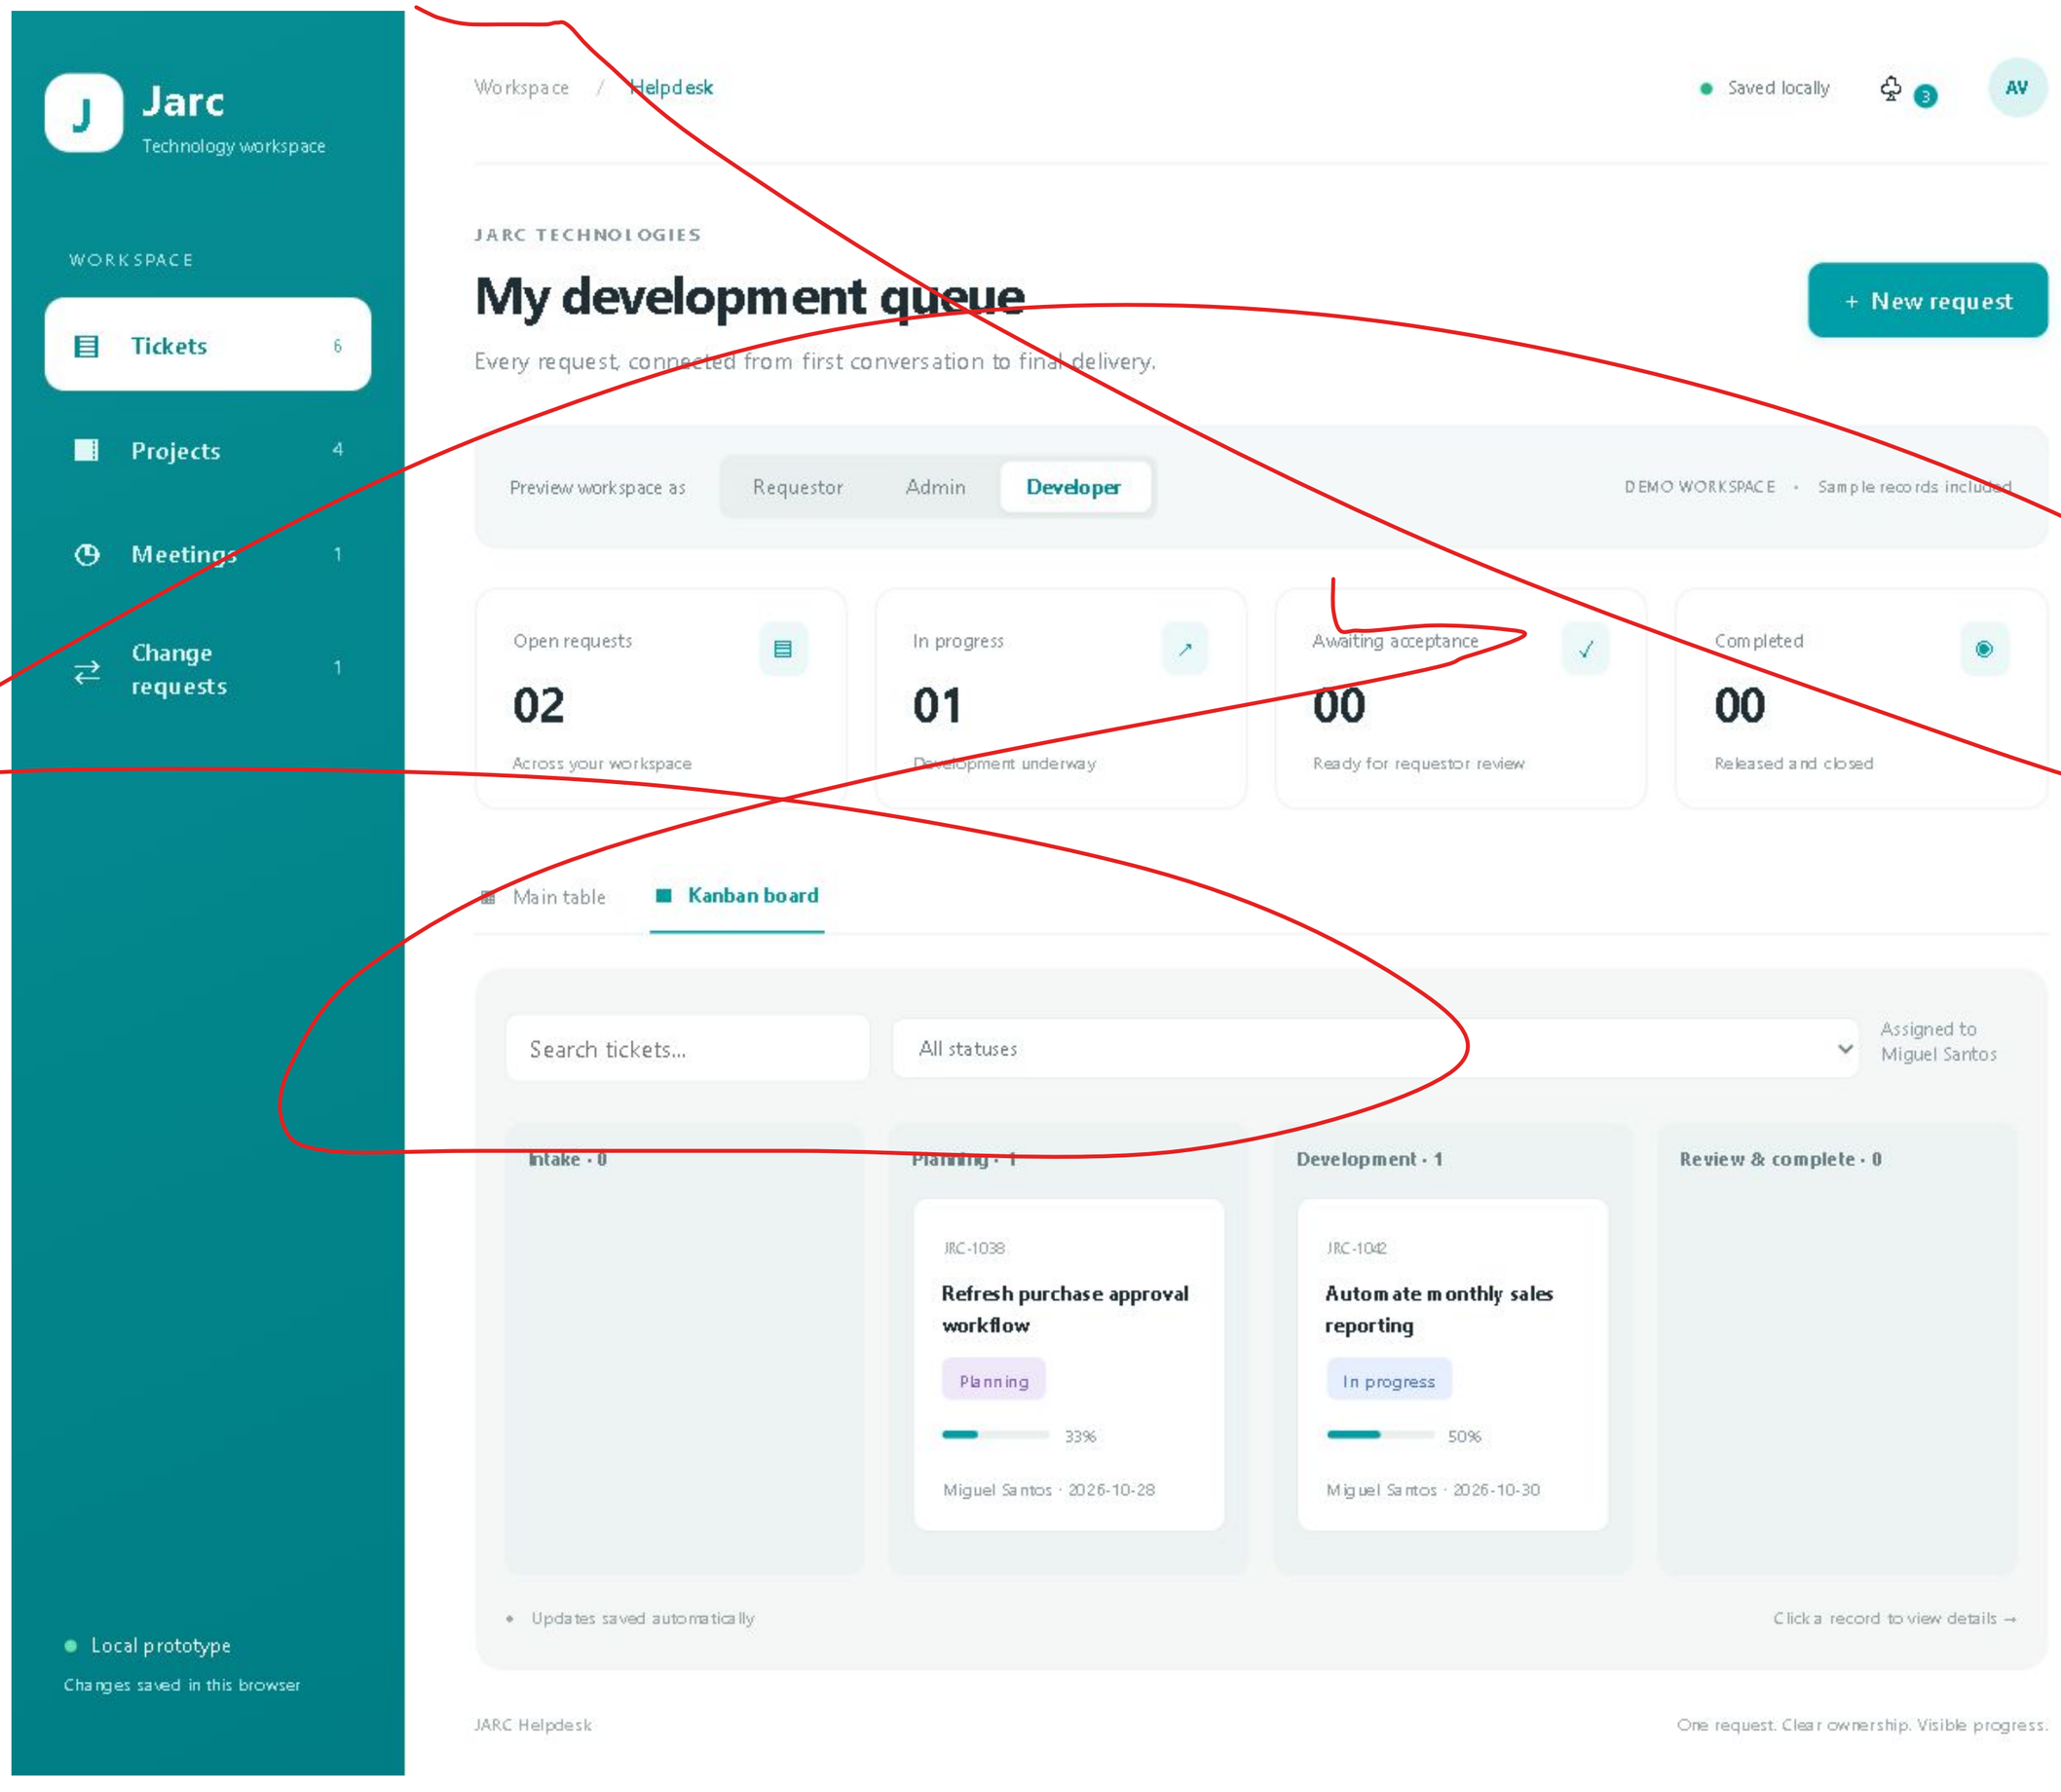

Developer | Assigned development queue

LABELS & ACTIONS

Developer preview is Miguel Santos. Only his assigned tickets appear. Planning, development, and acceptance states remain visible in the same queue.

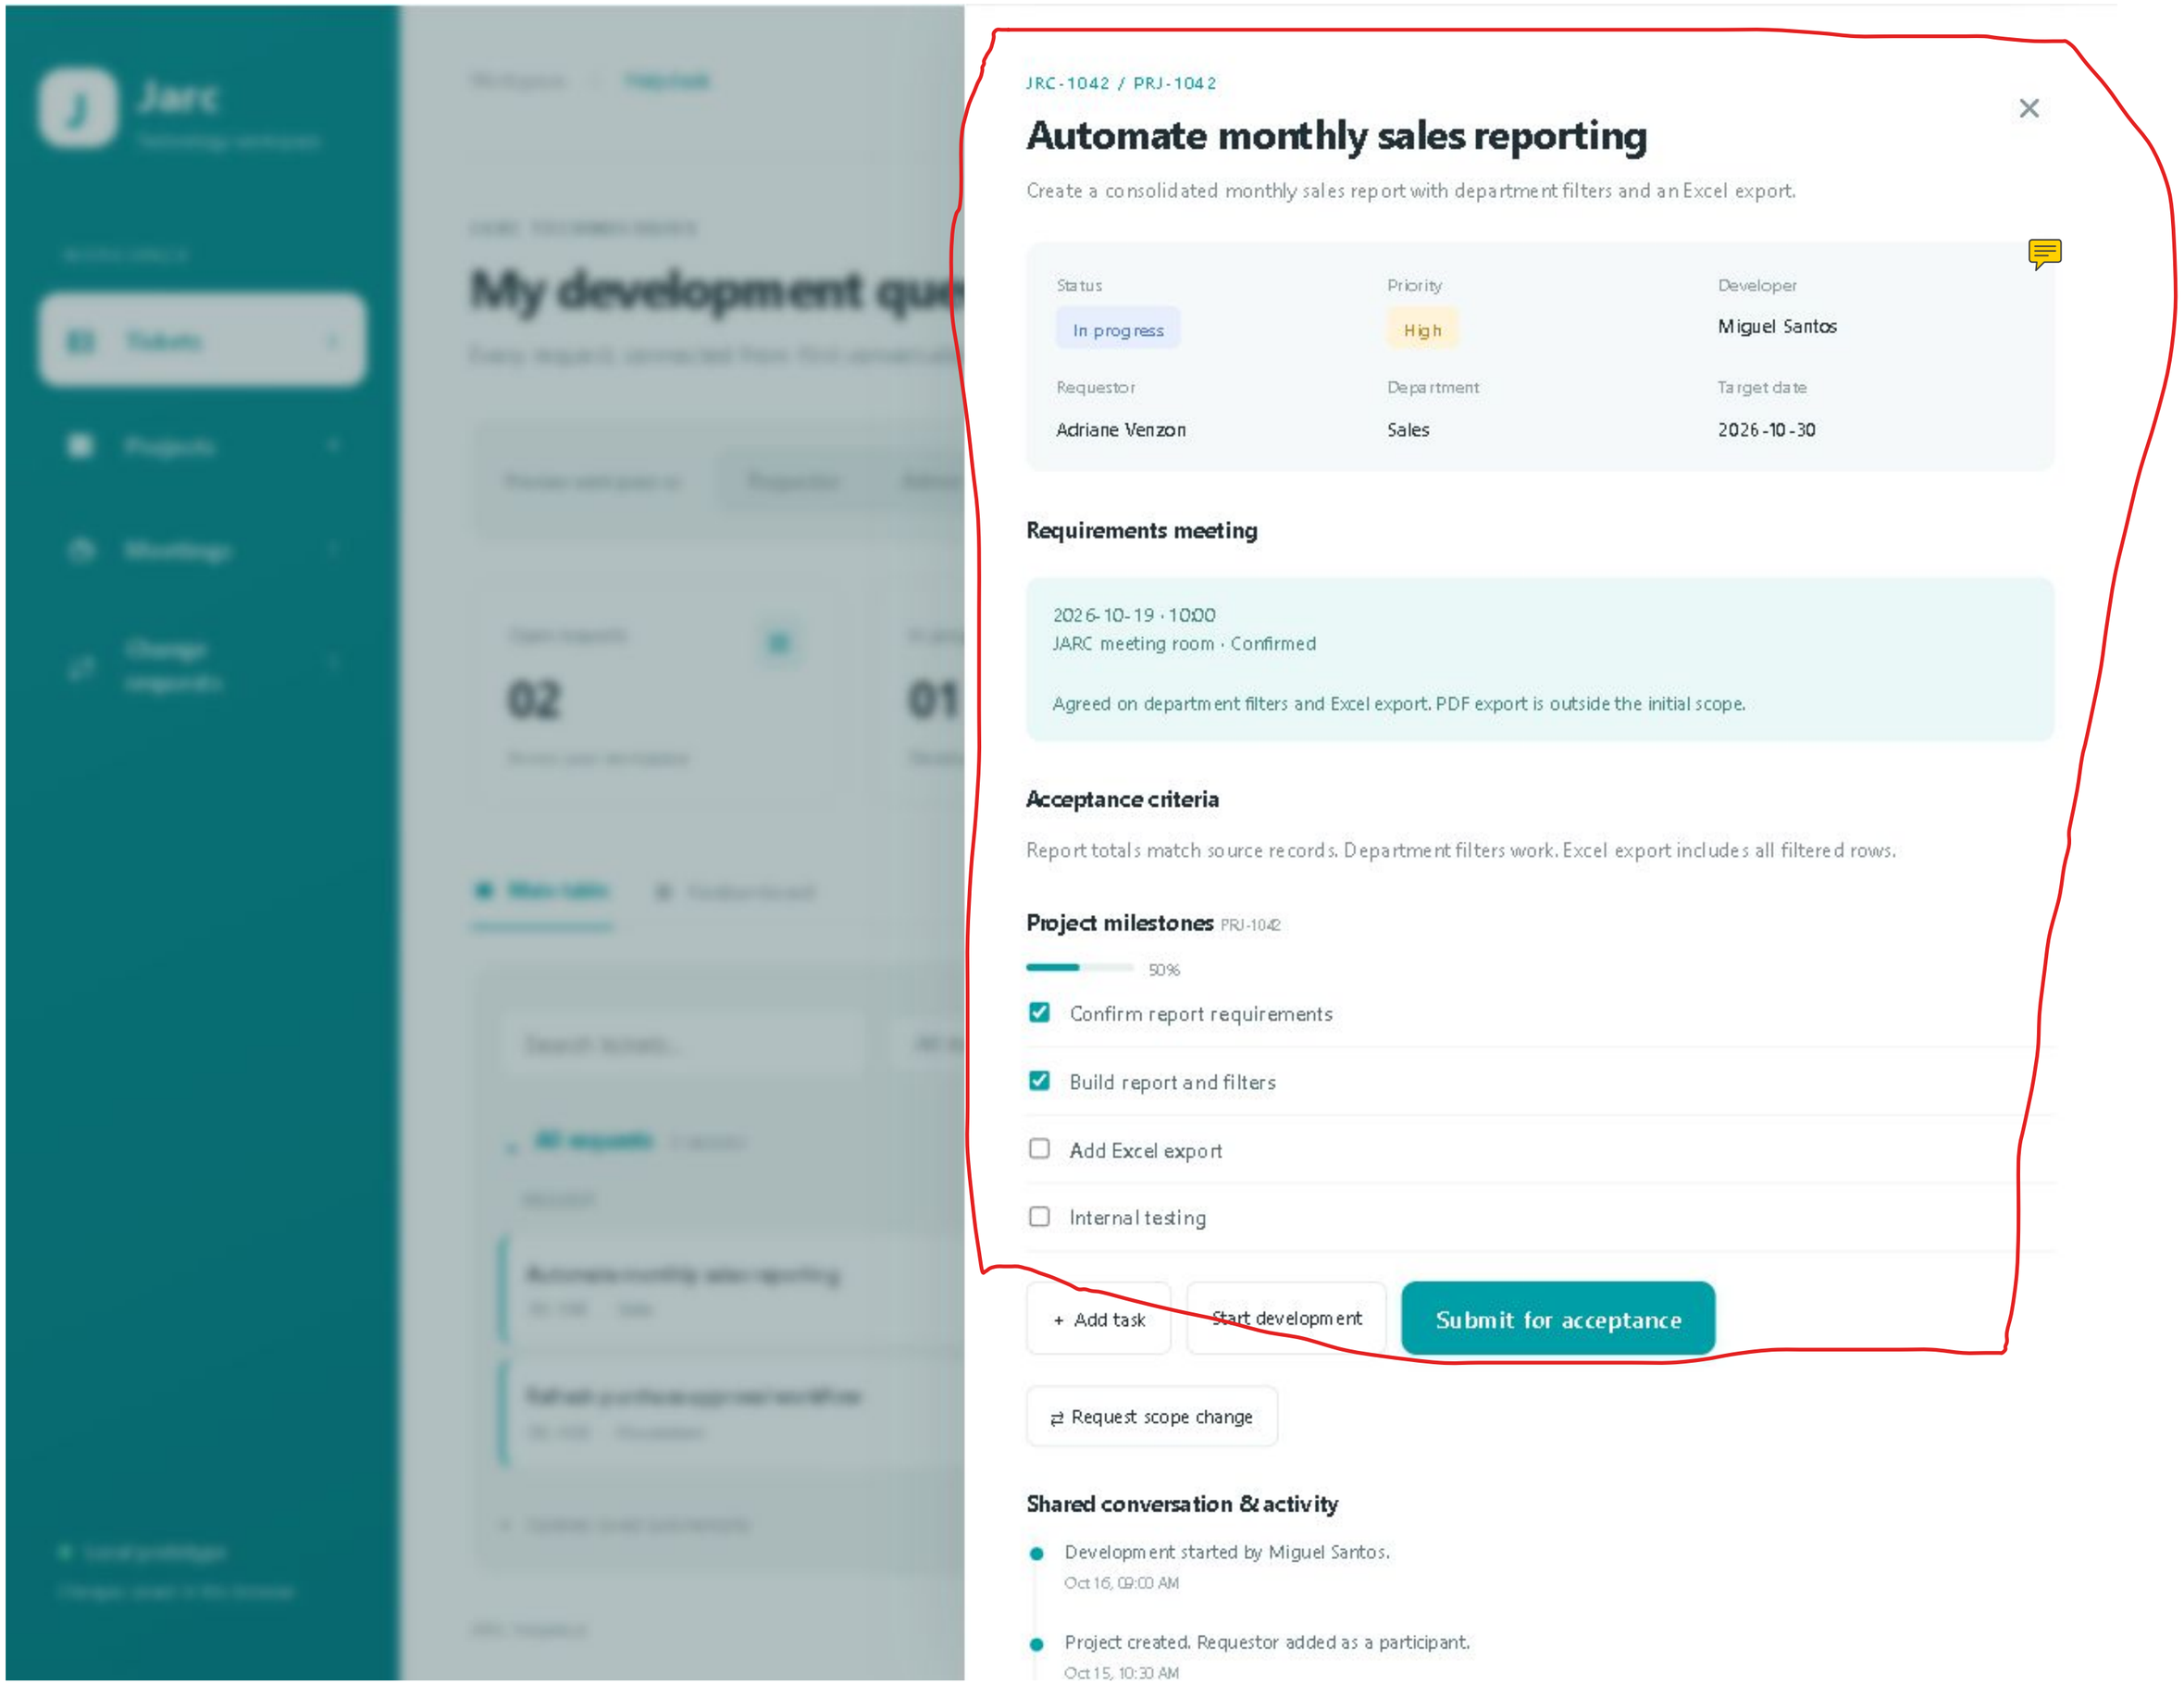

Developer | Kanban board

LABELS & ACTIONS

Intake groups submitted and assigned work. Planning includes requirements and holds. Development shows active work. Review & complete includes acceptance, release, and closure. Click a card to open the ticket.

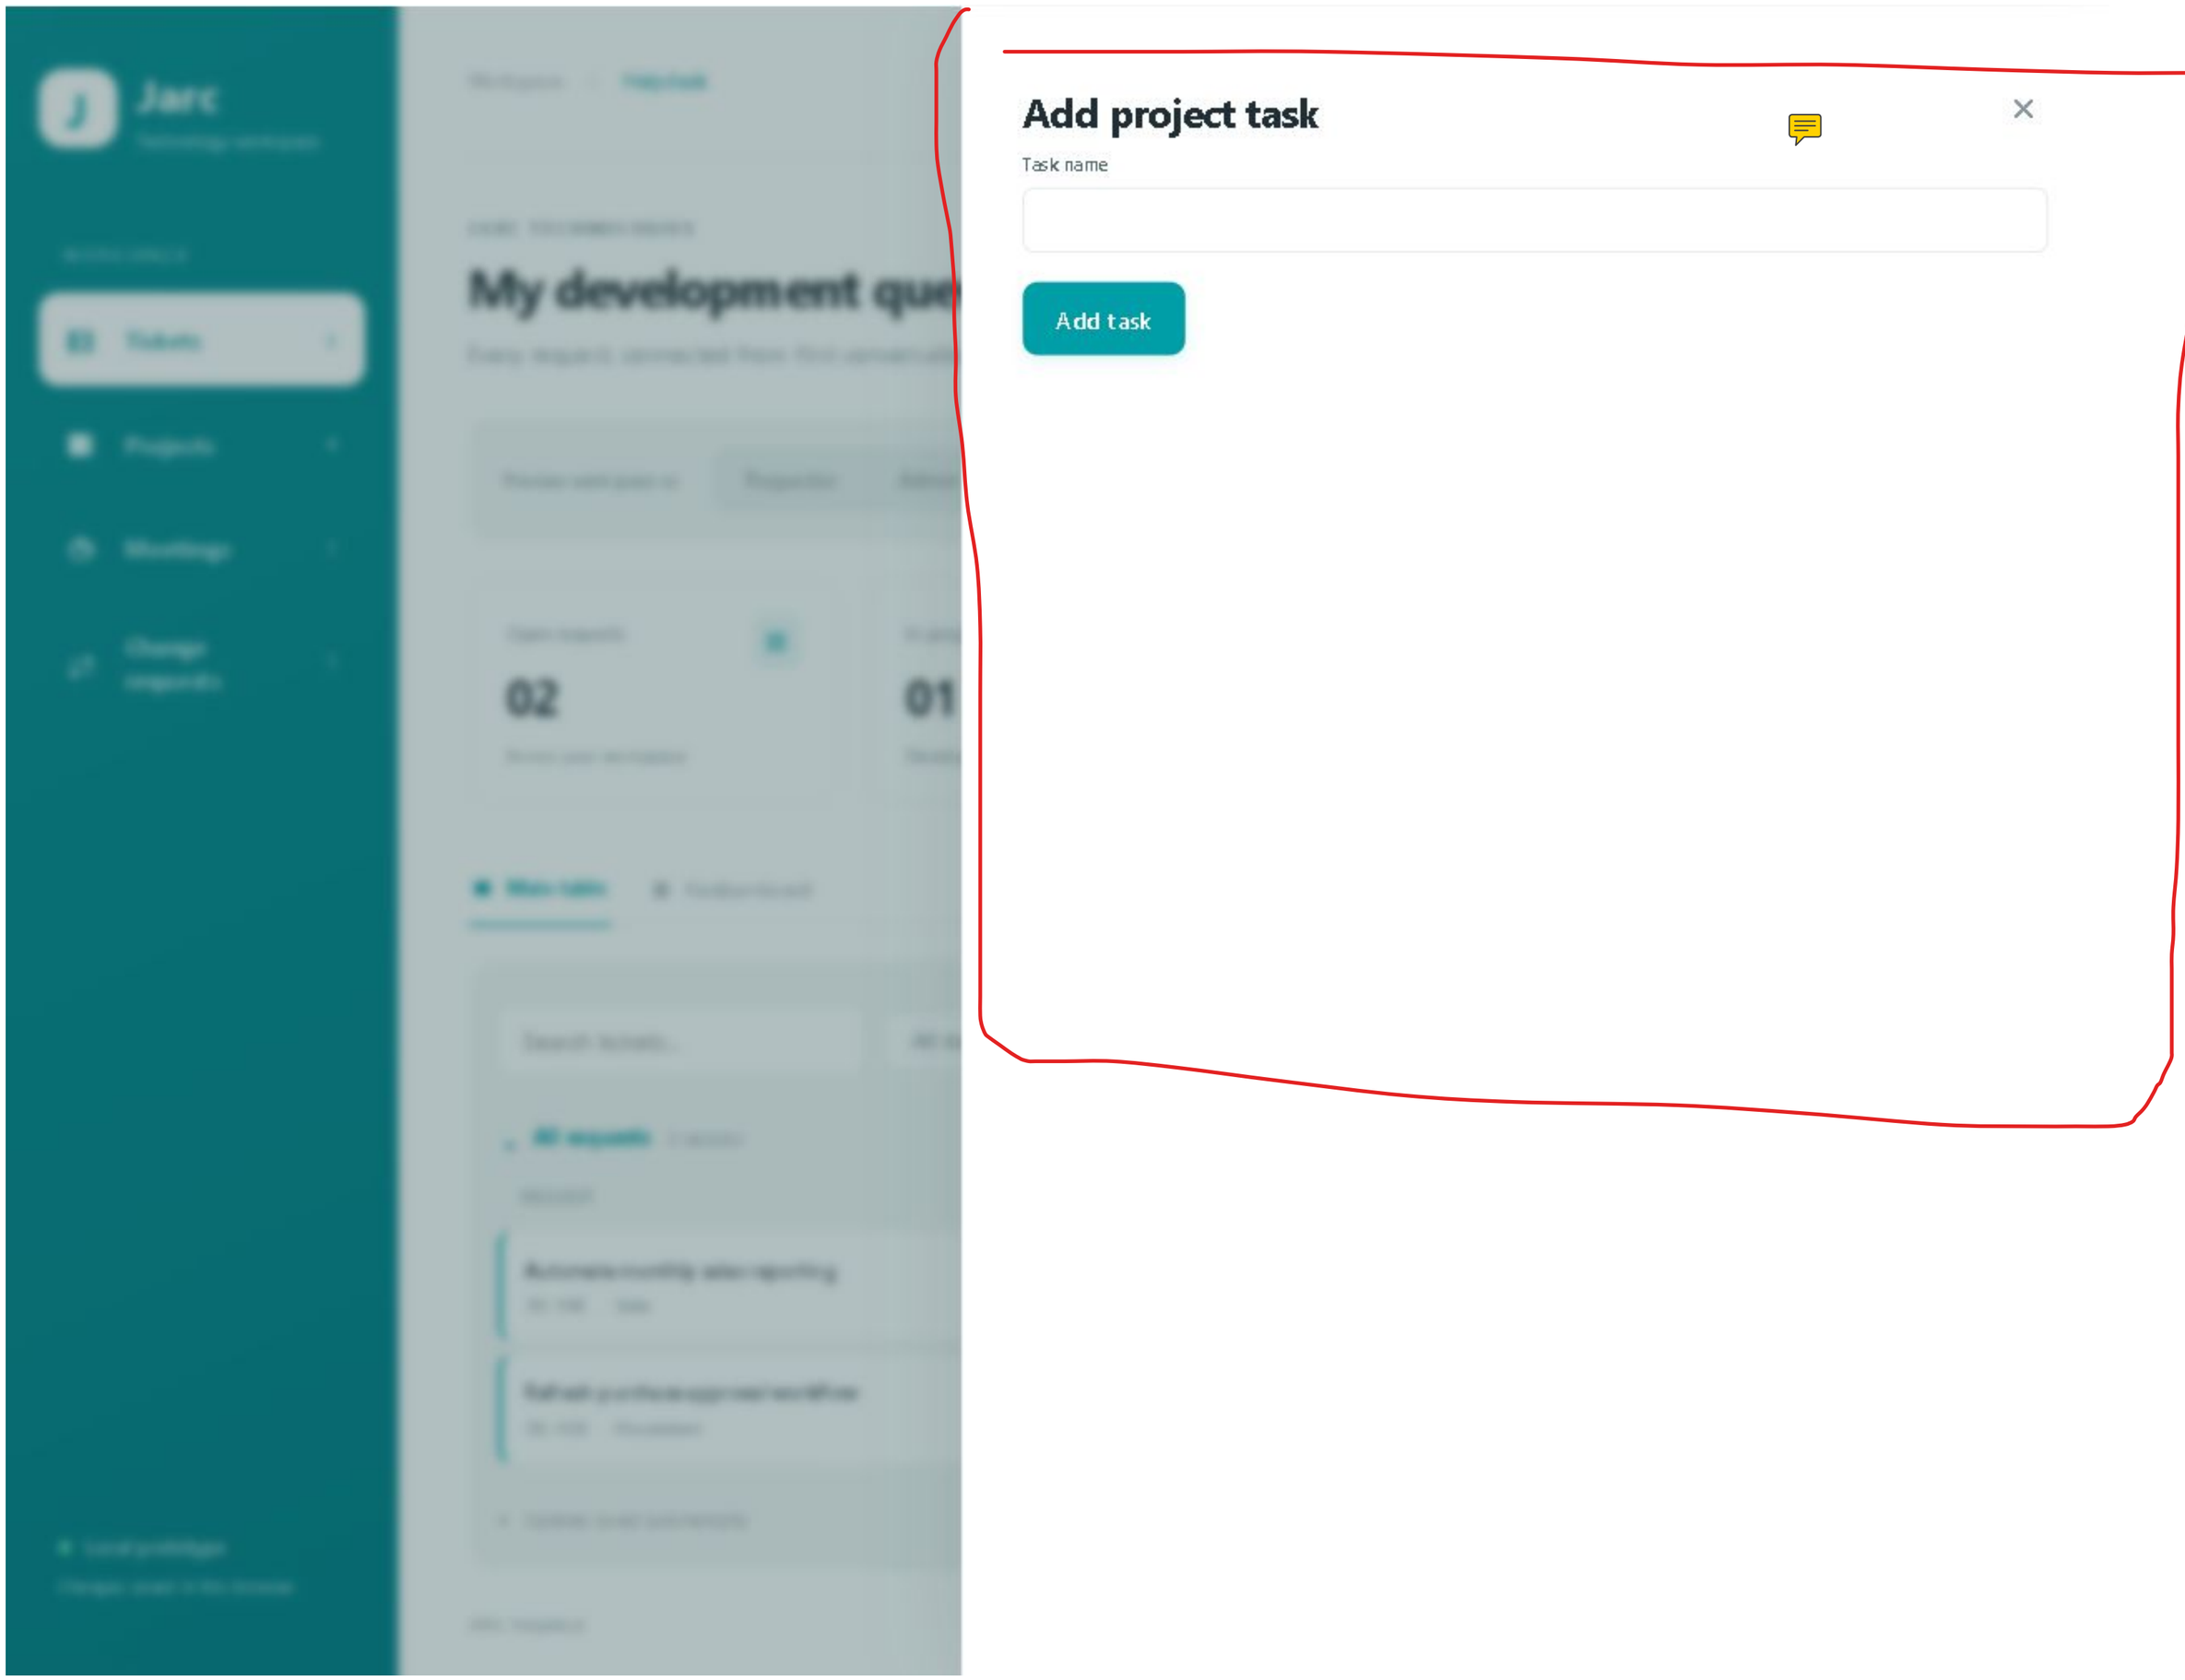

Developer | Project detail and milestones

LABELS & ACTIONS

Ticket and project IDs link the records. Requirements meeting shows time, location, confirmation, and notes. Acceptance criteria define completion. Task checkboxes update progress. Submit for acceptance requires complete tasks and internal testing.

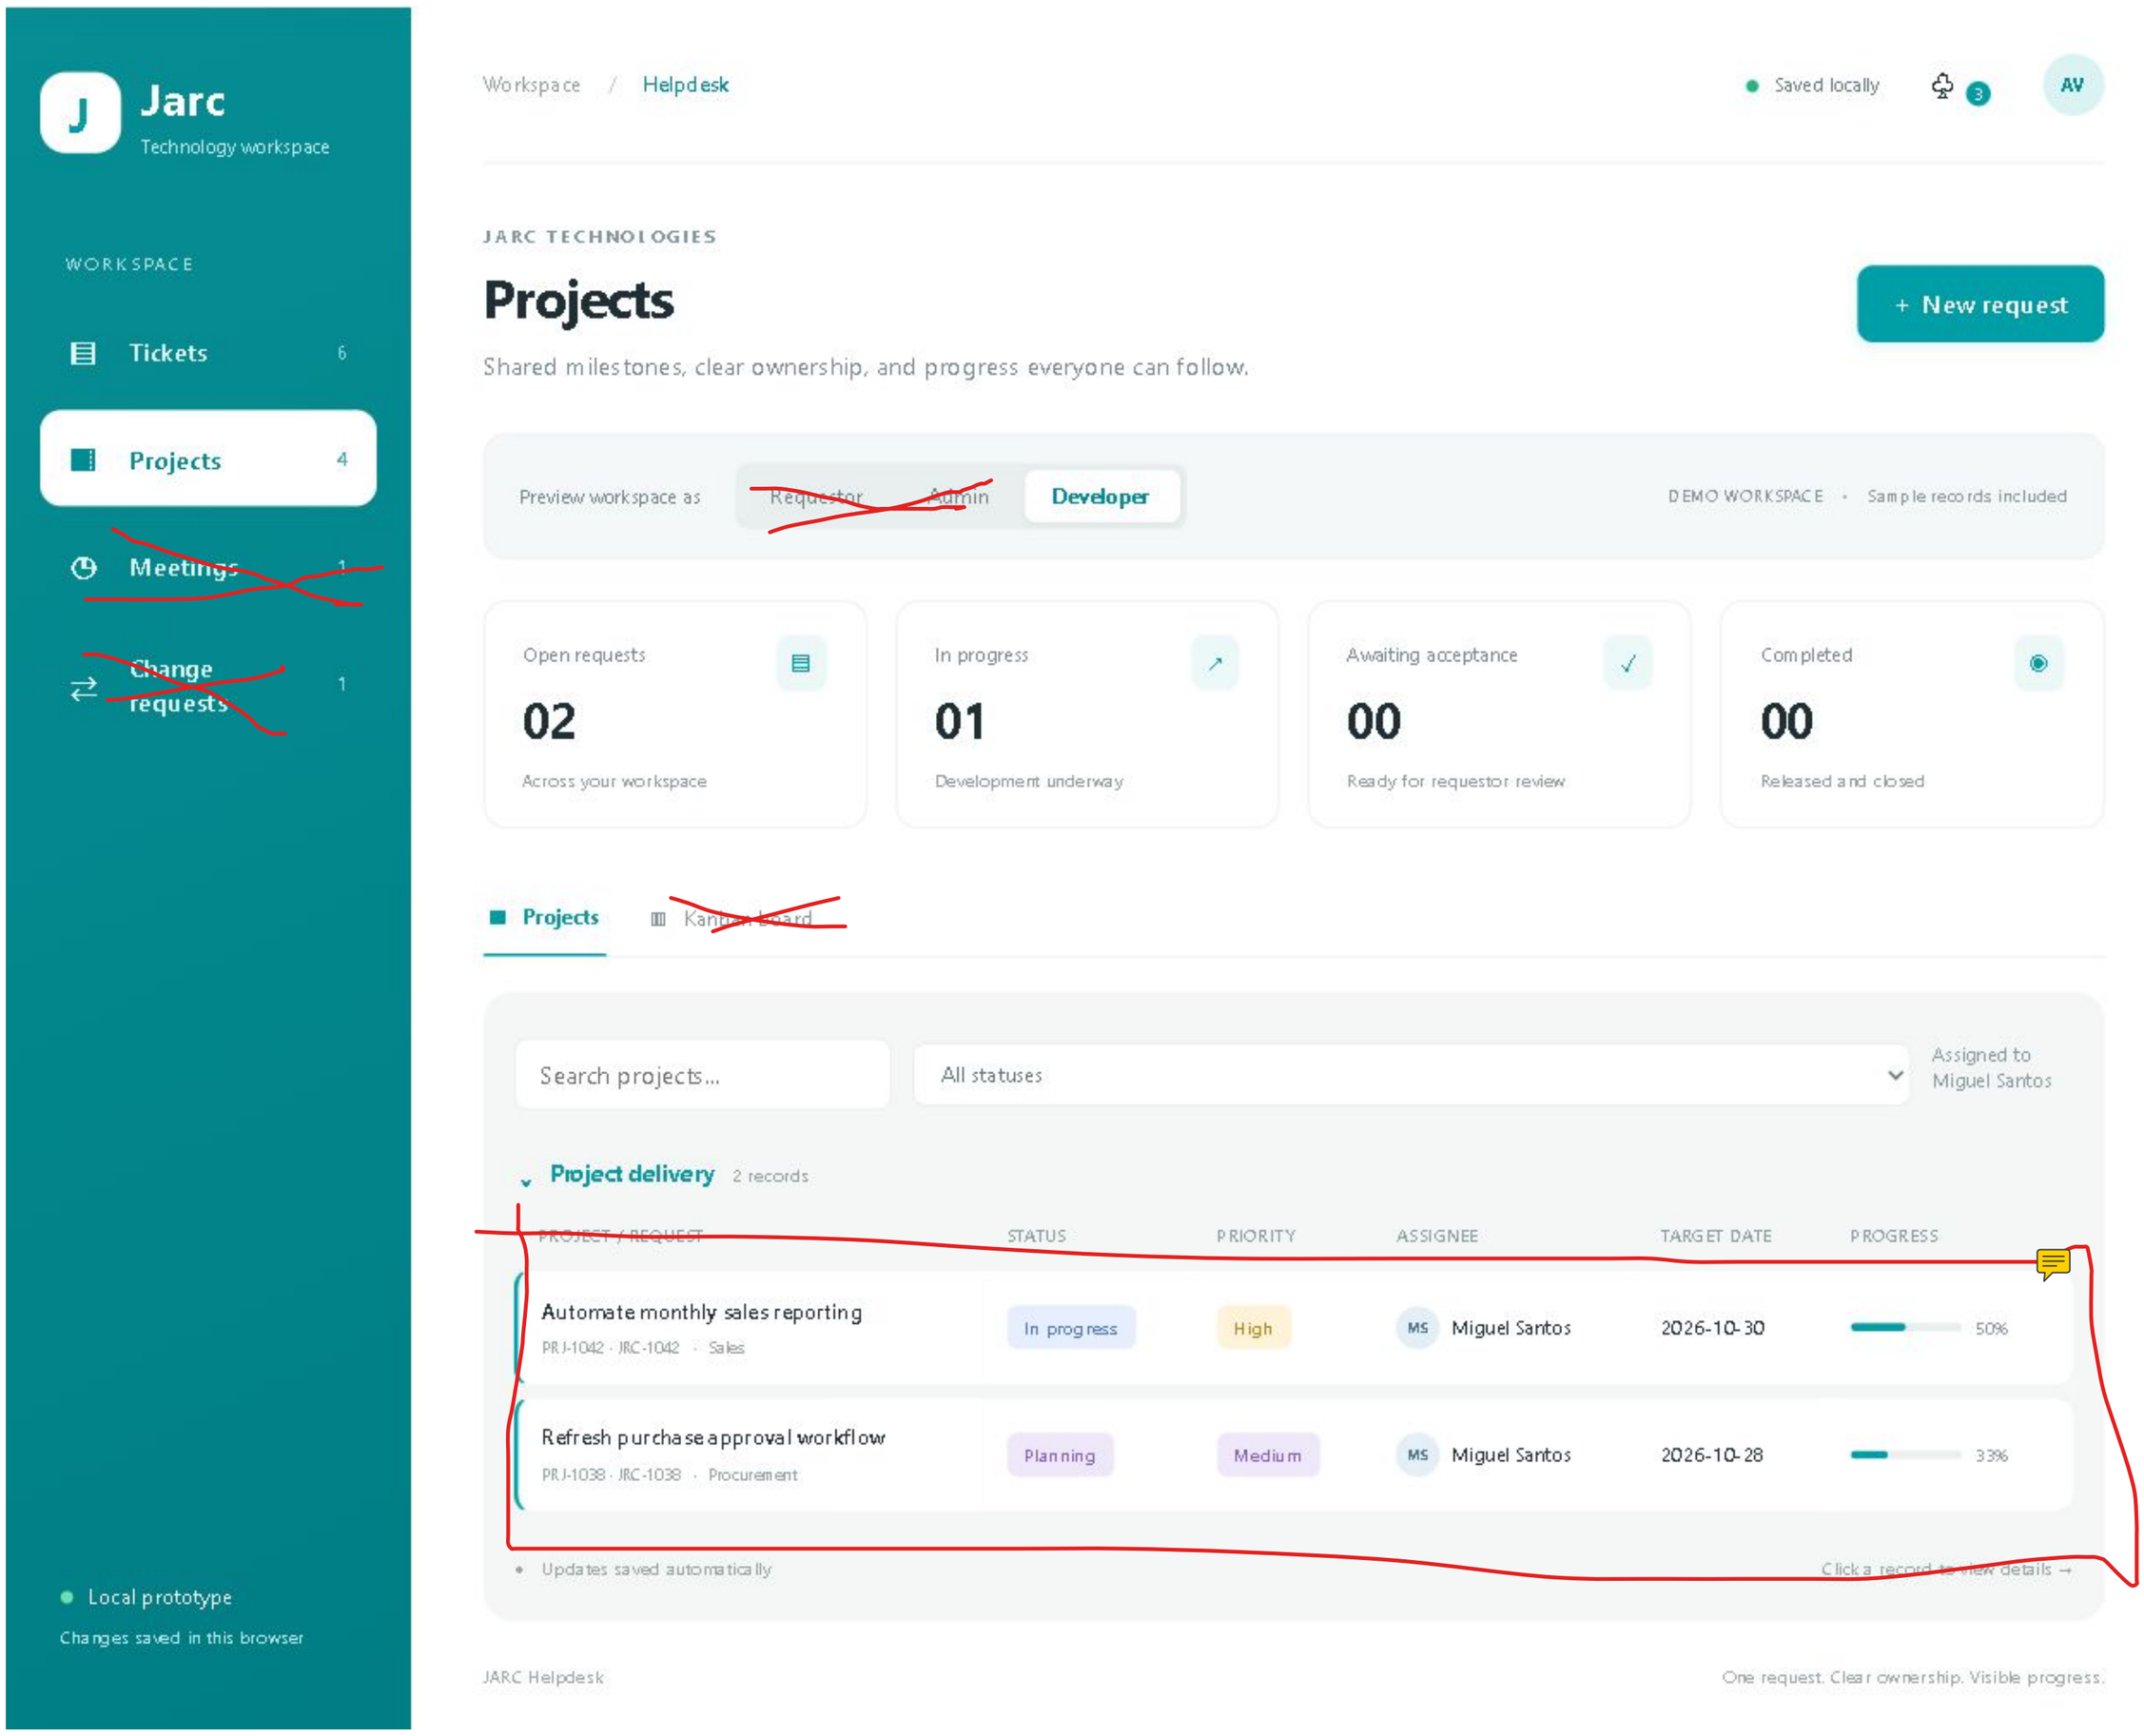

Developer | Add project task

LABELS & ACTIONS

Task name describes the deliverable. Add task appends it to the linked project.

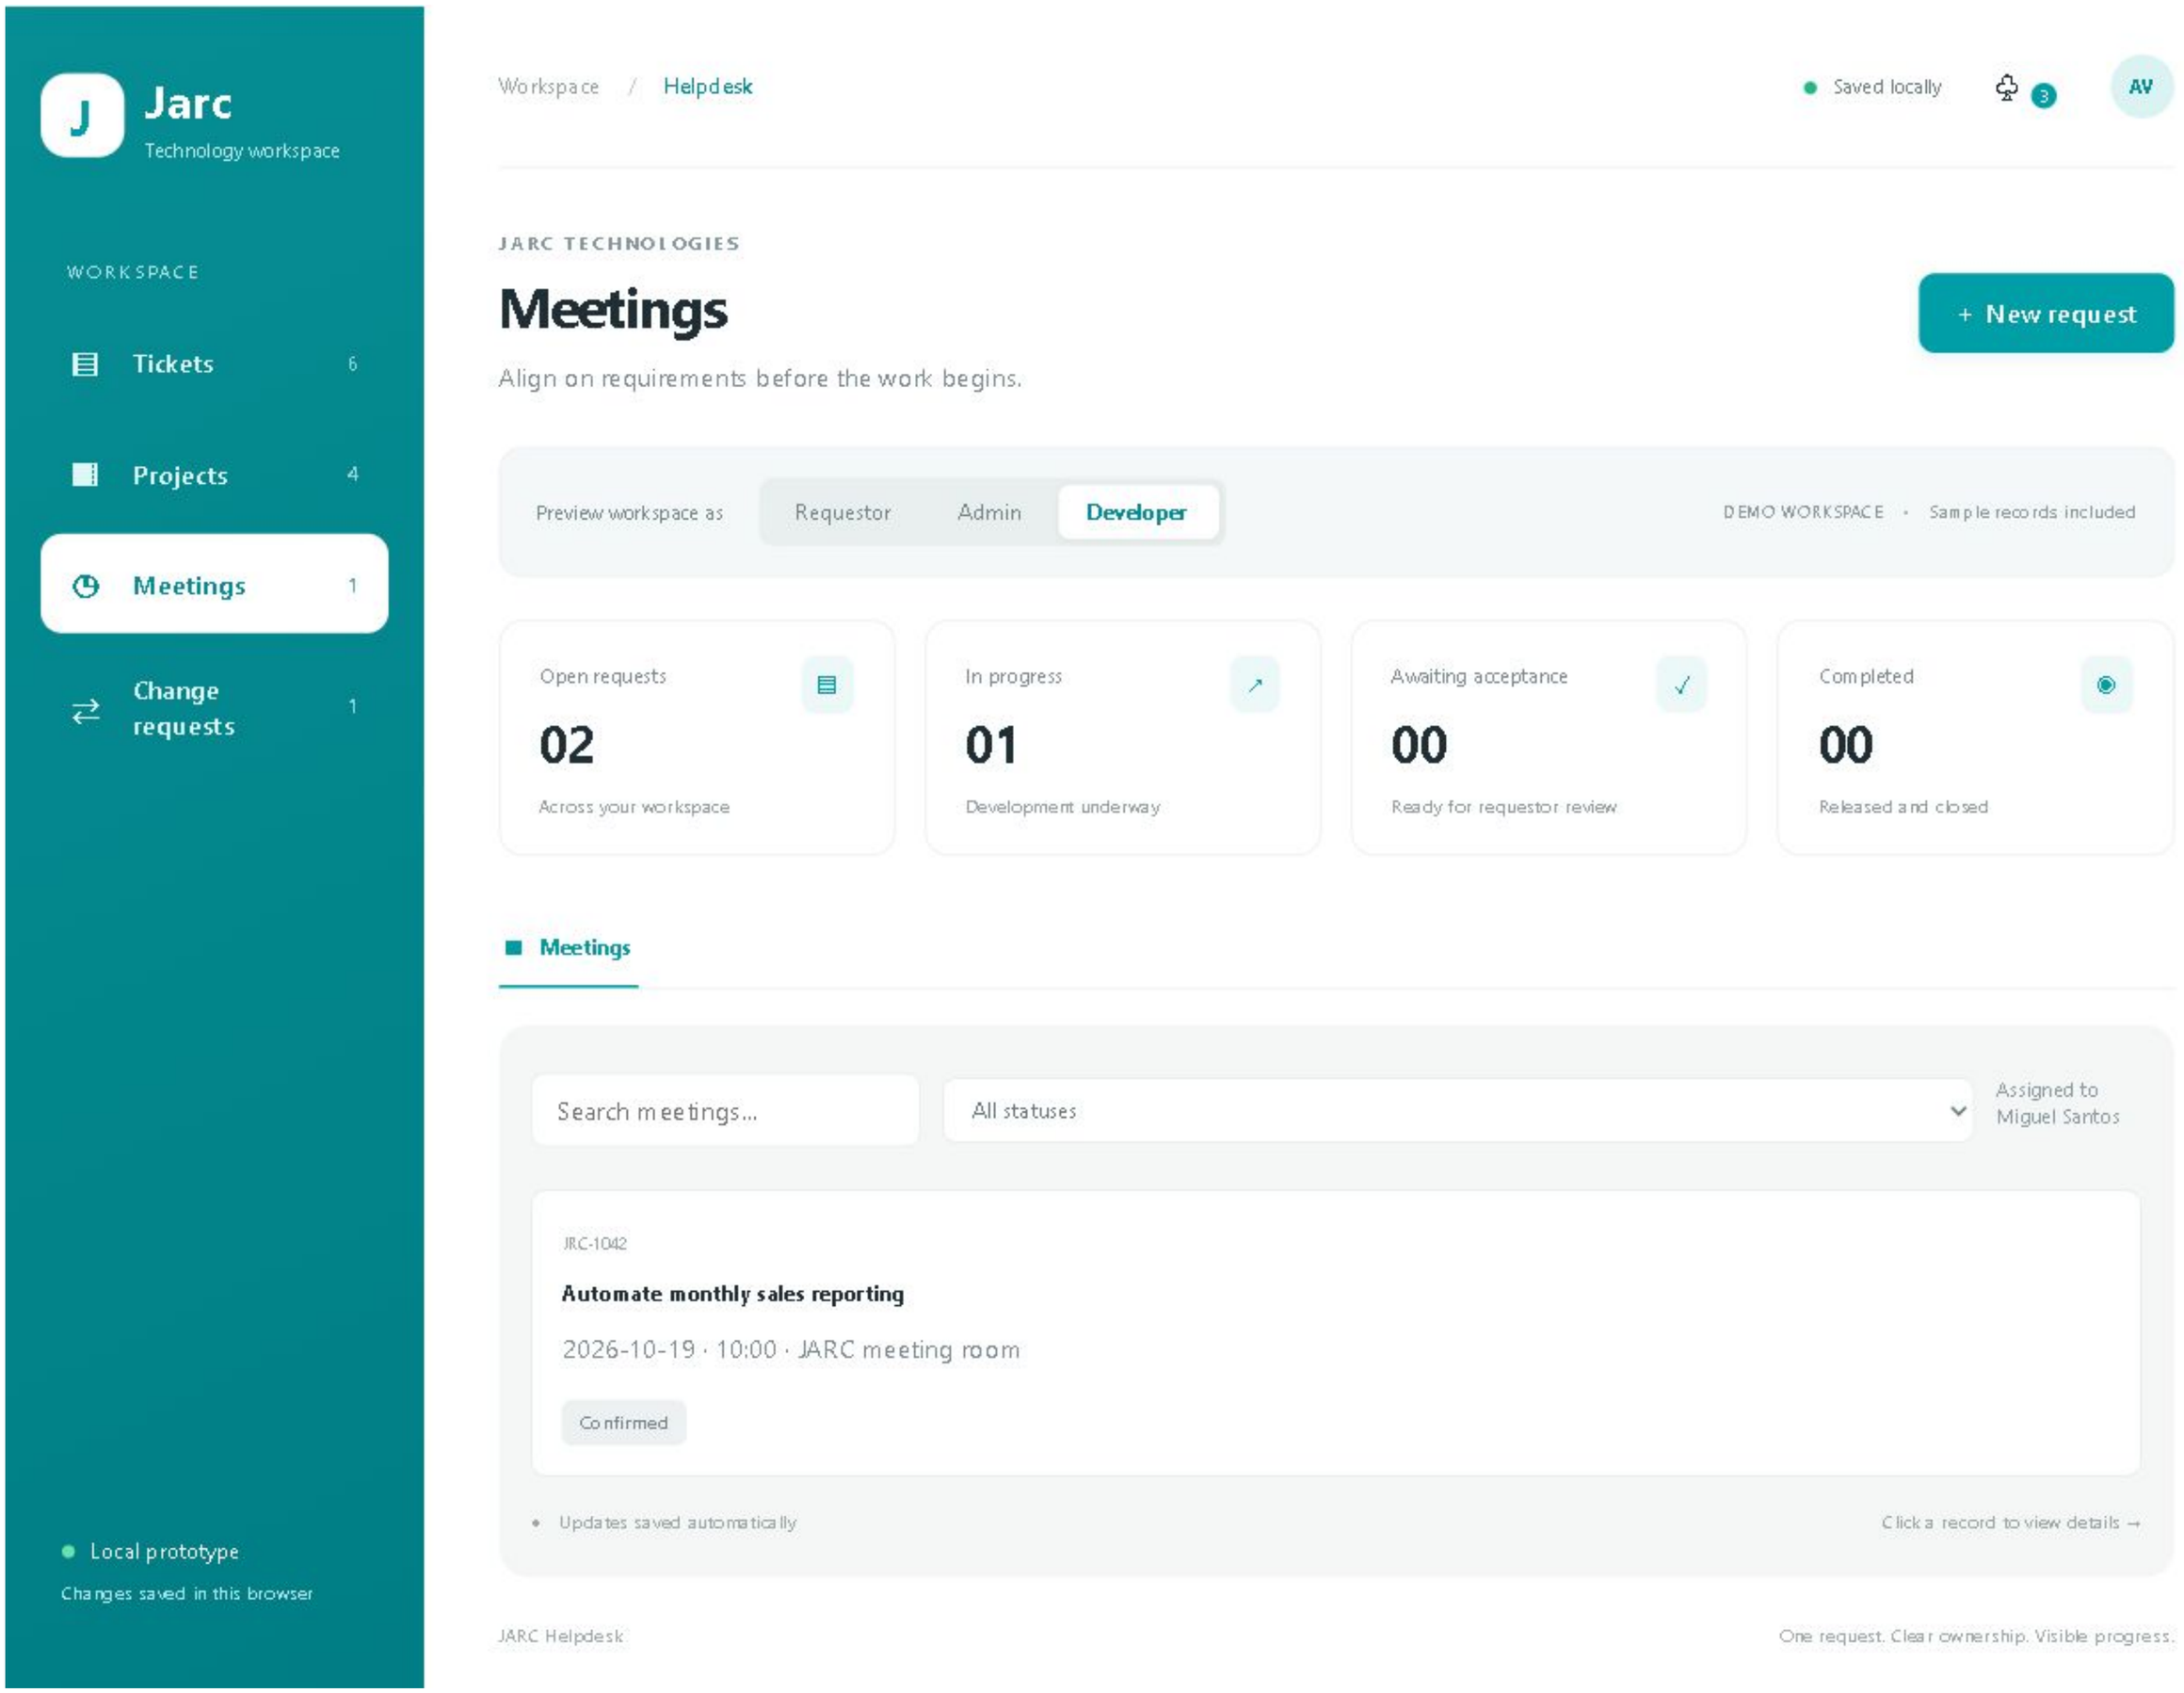

Shared | Projects board

LABELS & ACTIONS

Project ID identifies delivery tracking; ticket ID identifies the original request. Task completion drives Progress.

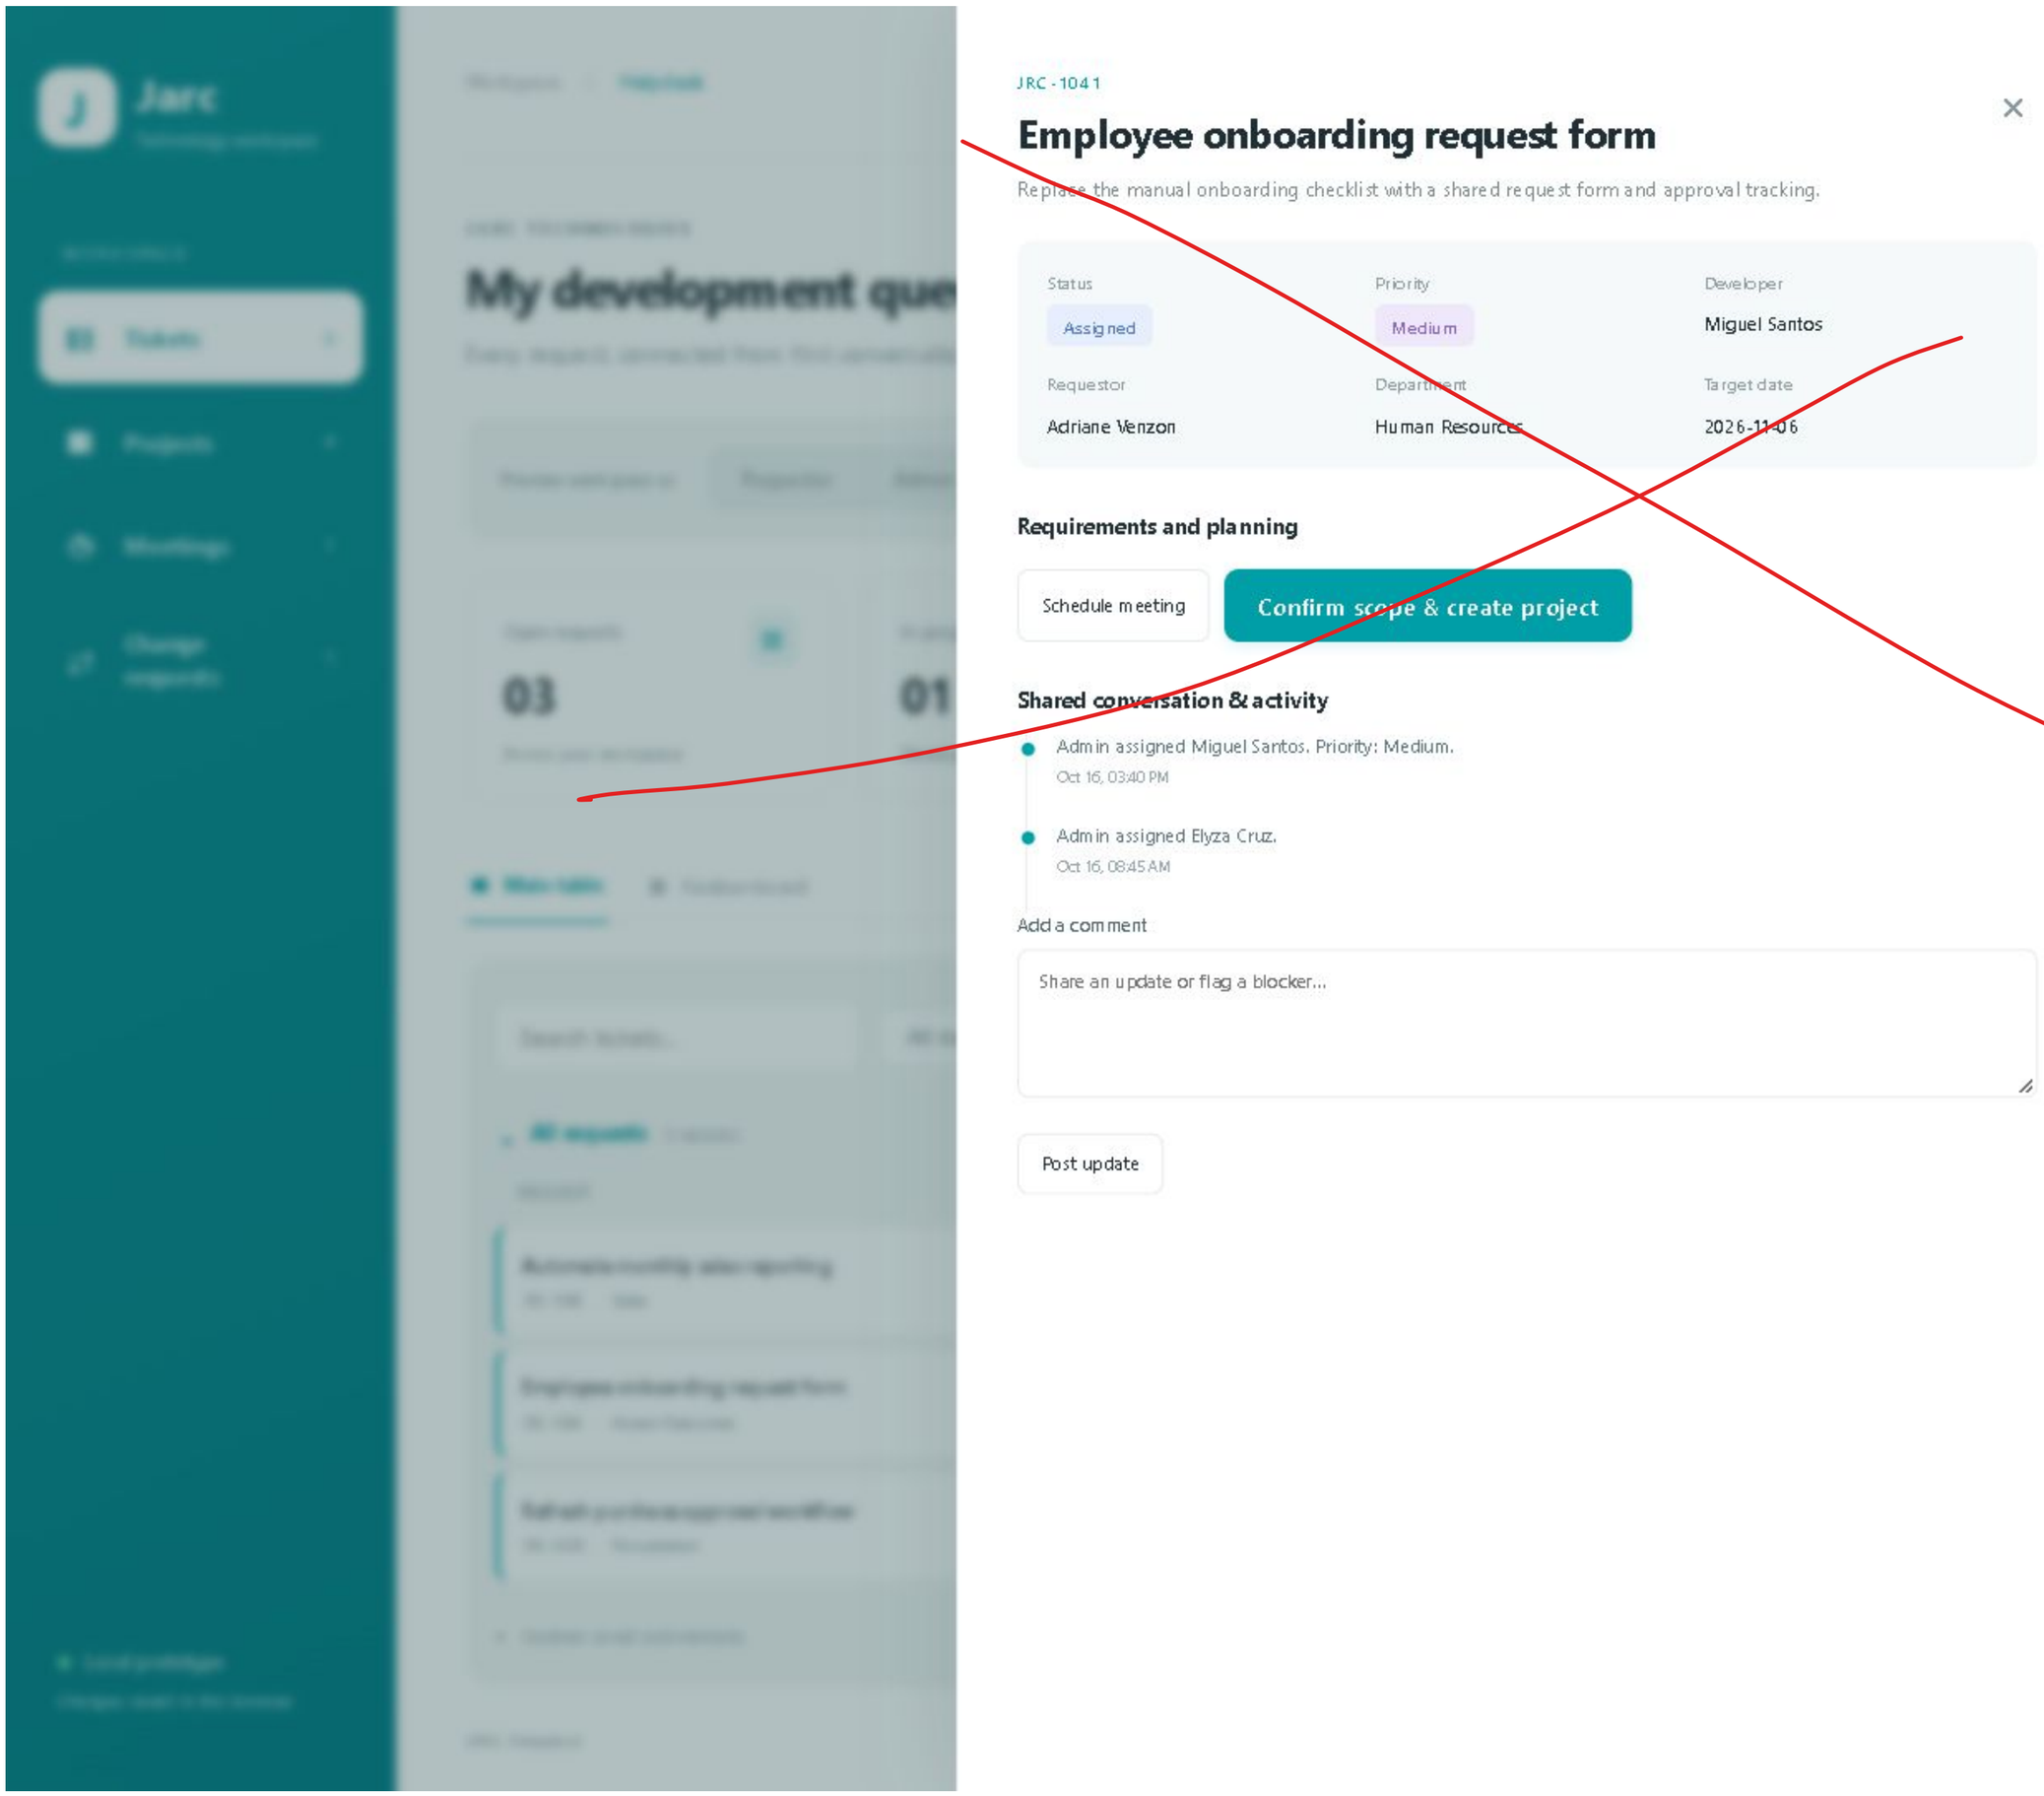

Shared | Meetings

LABELS & ACTIONS

Meeting cards show the linked request, schedule, location, and confirmation state. Open a card to view meeting notes and ticket details.

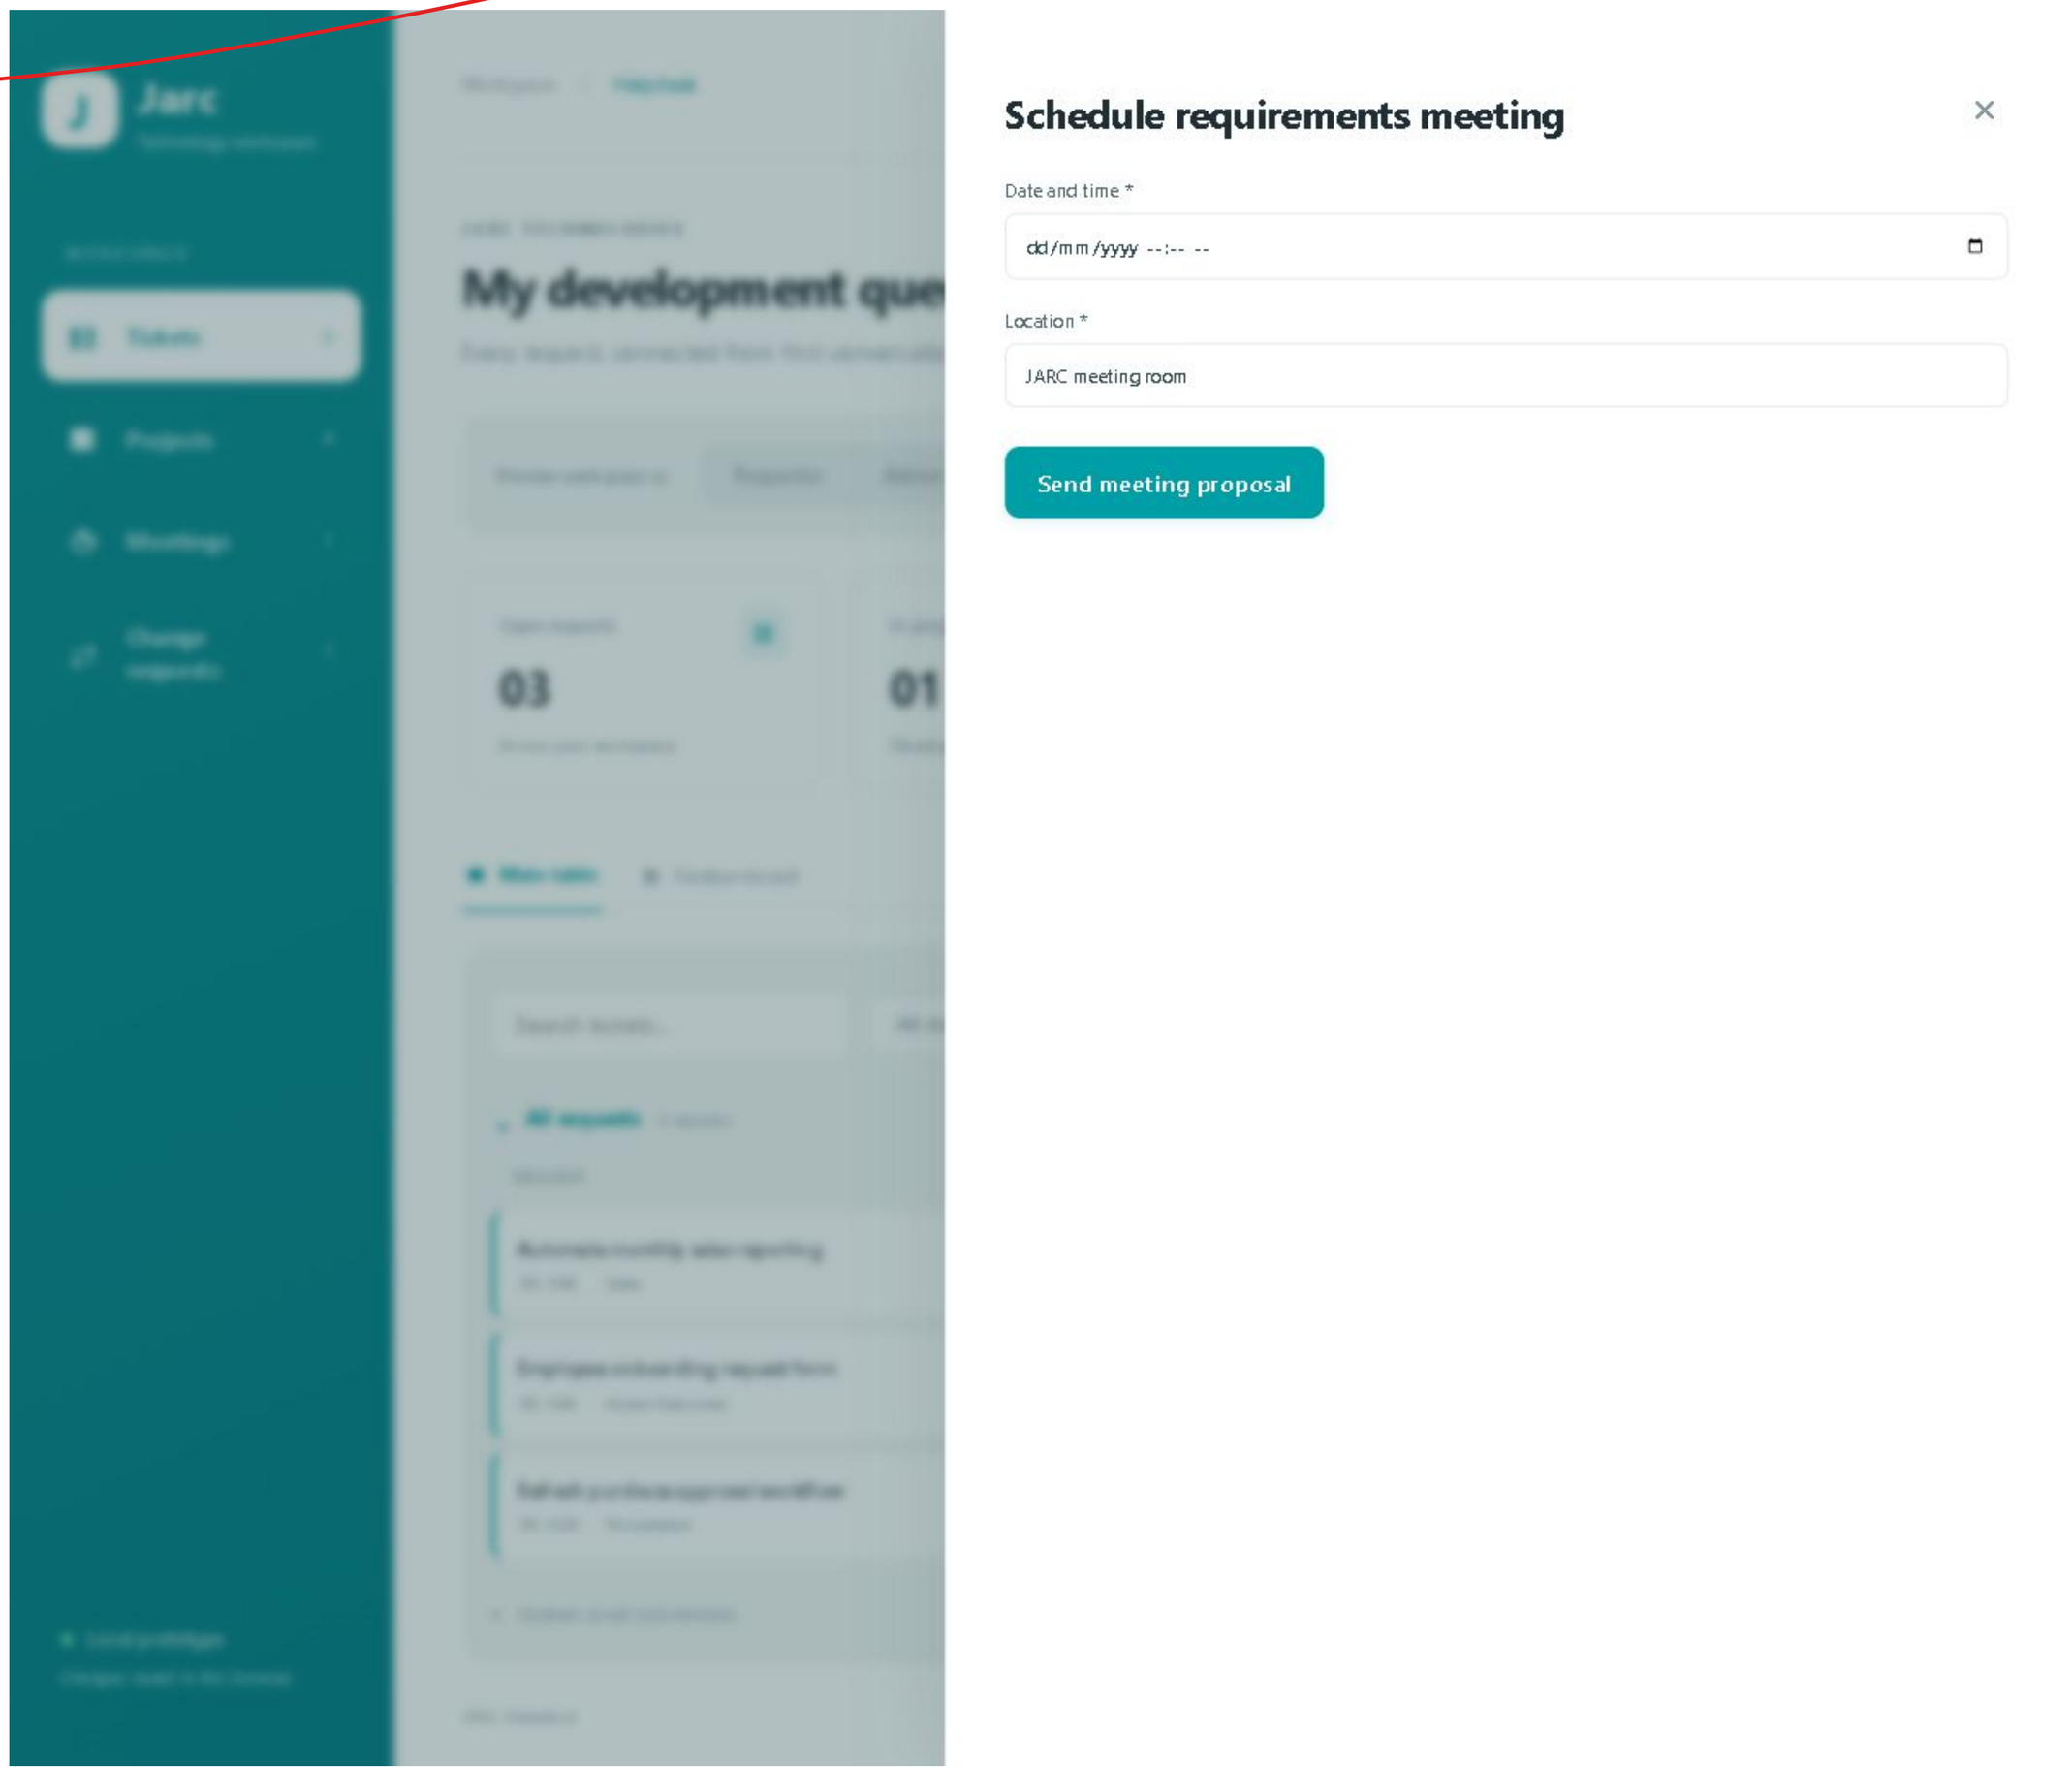

Developer | Requirements and planning

LABELS & ACTIONS

Schedule meeting proposes a face-to-face discussion. Confirm scope & create project records agreed requirements and creates a linked project item.

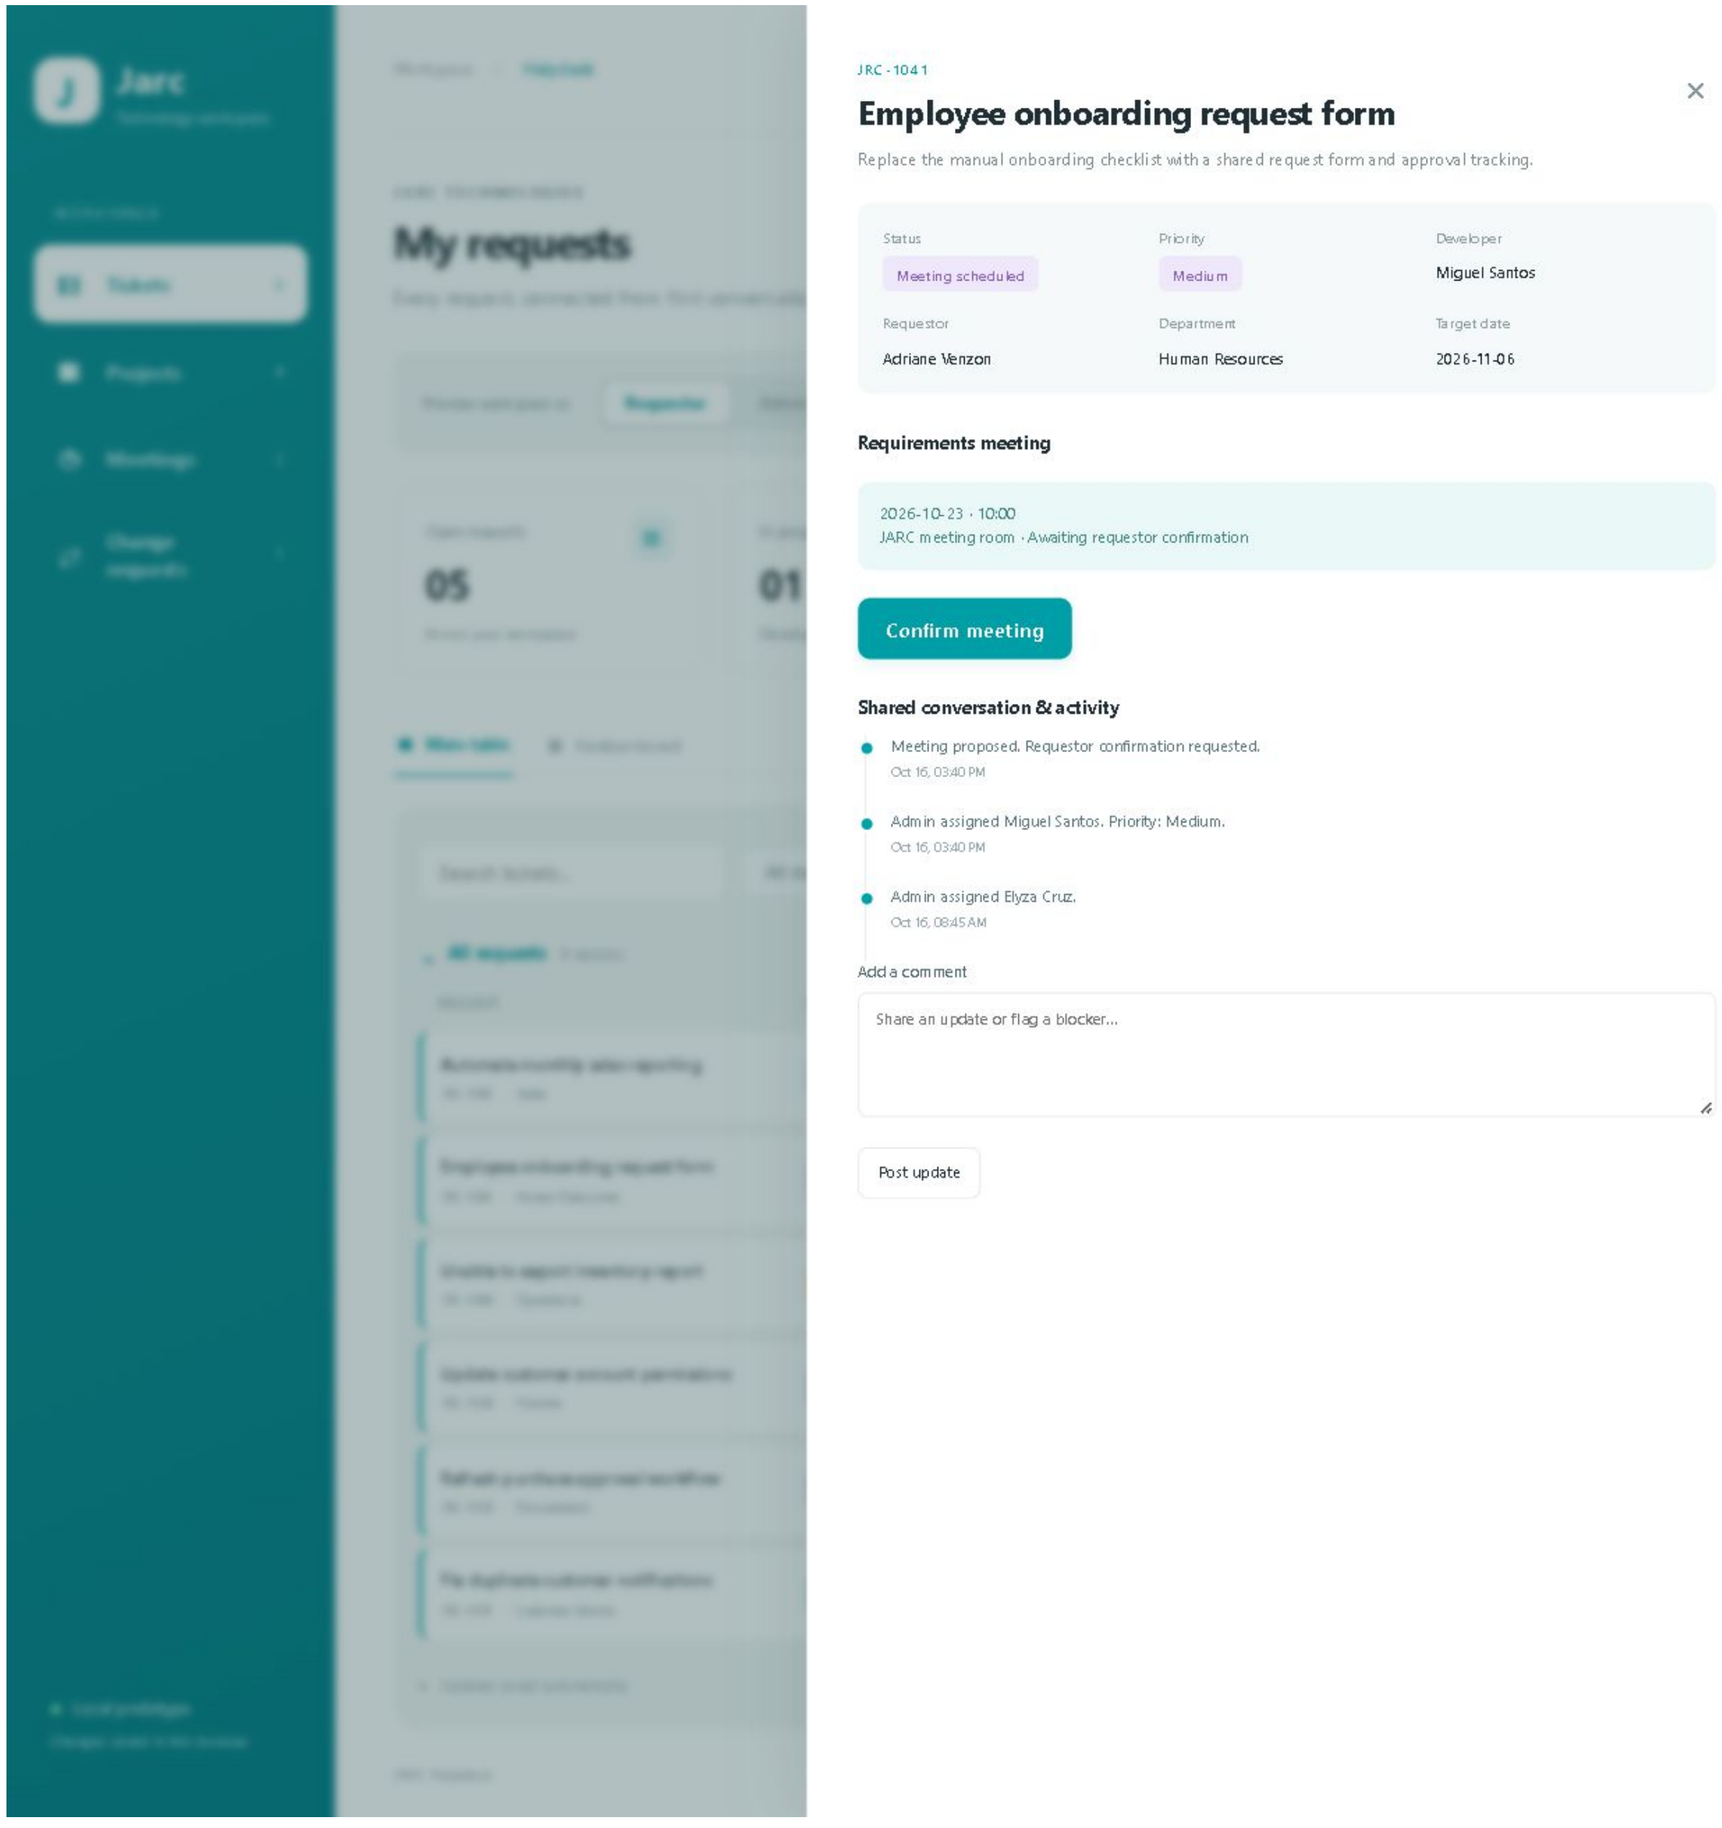

Developer | Schedule meeting form

LABELS & ACTIONS

Date and time and Location are required. Send meeting proposal notifies the requestor for confirmation.

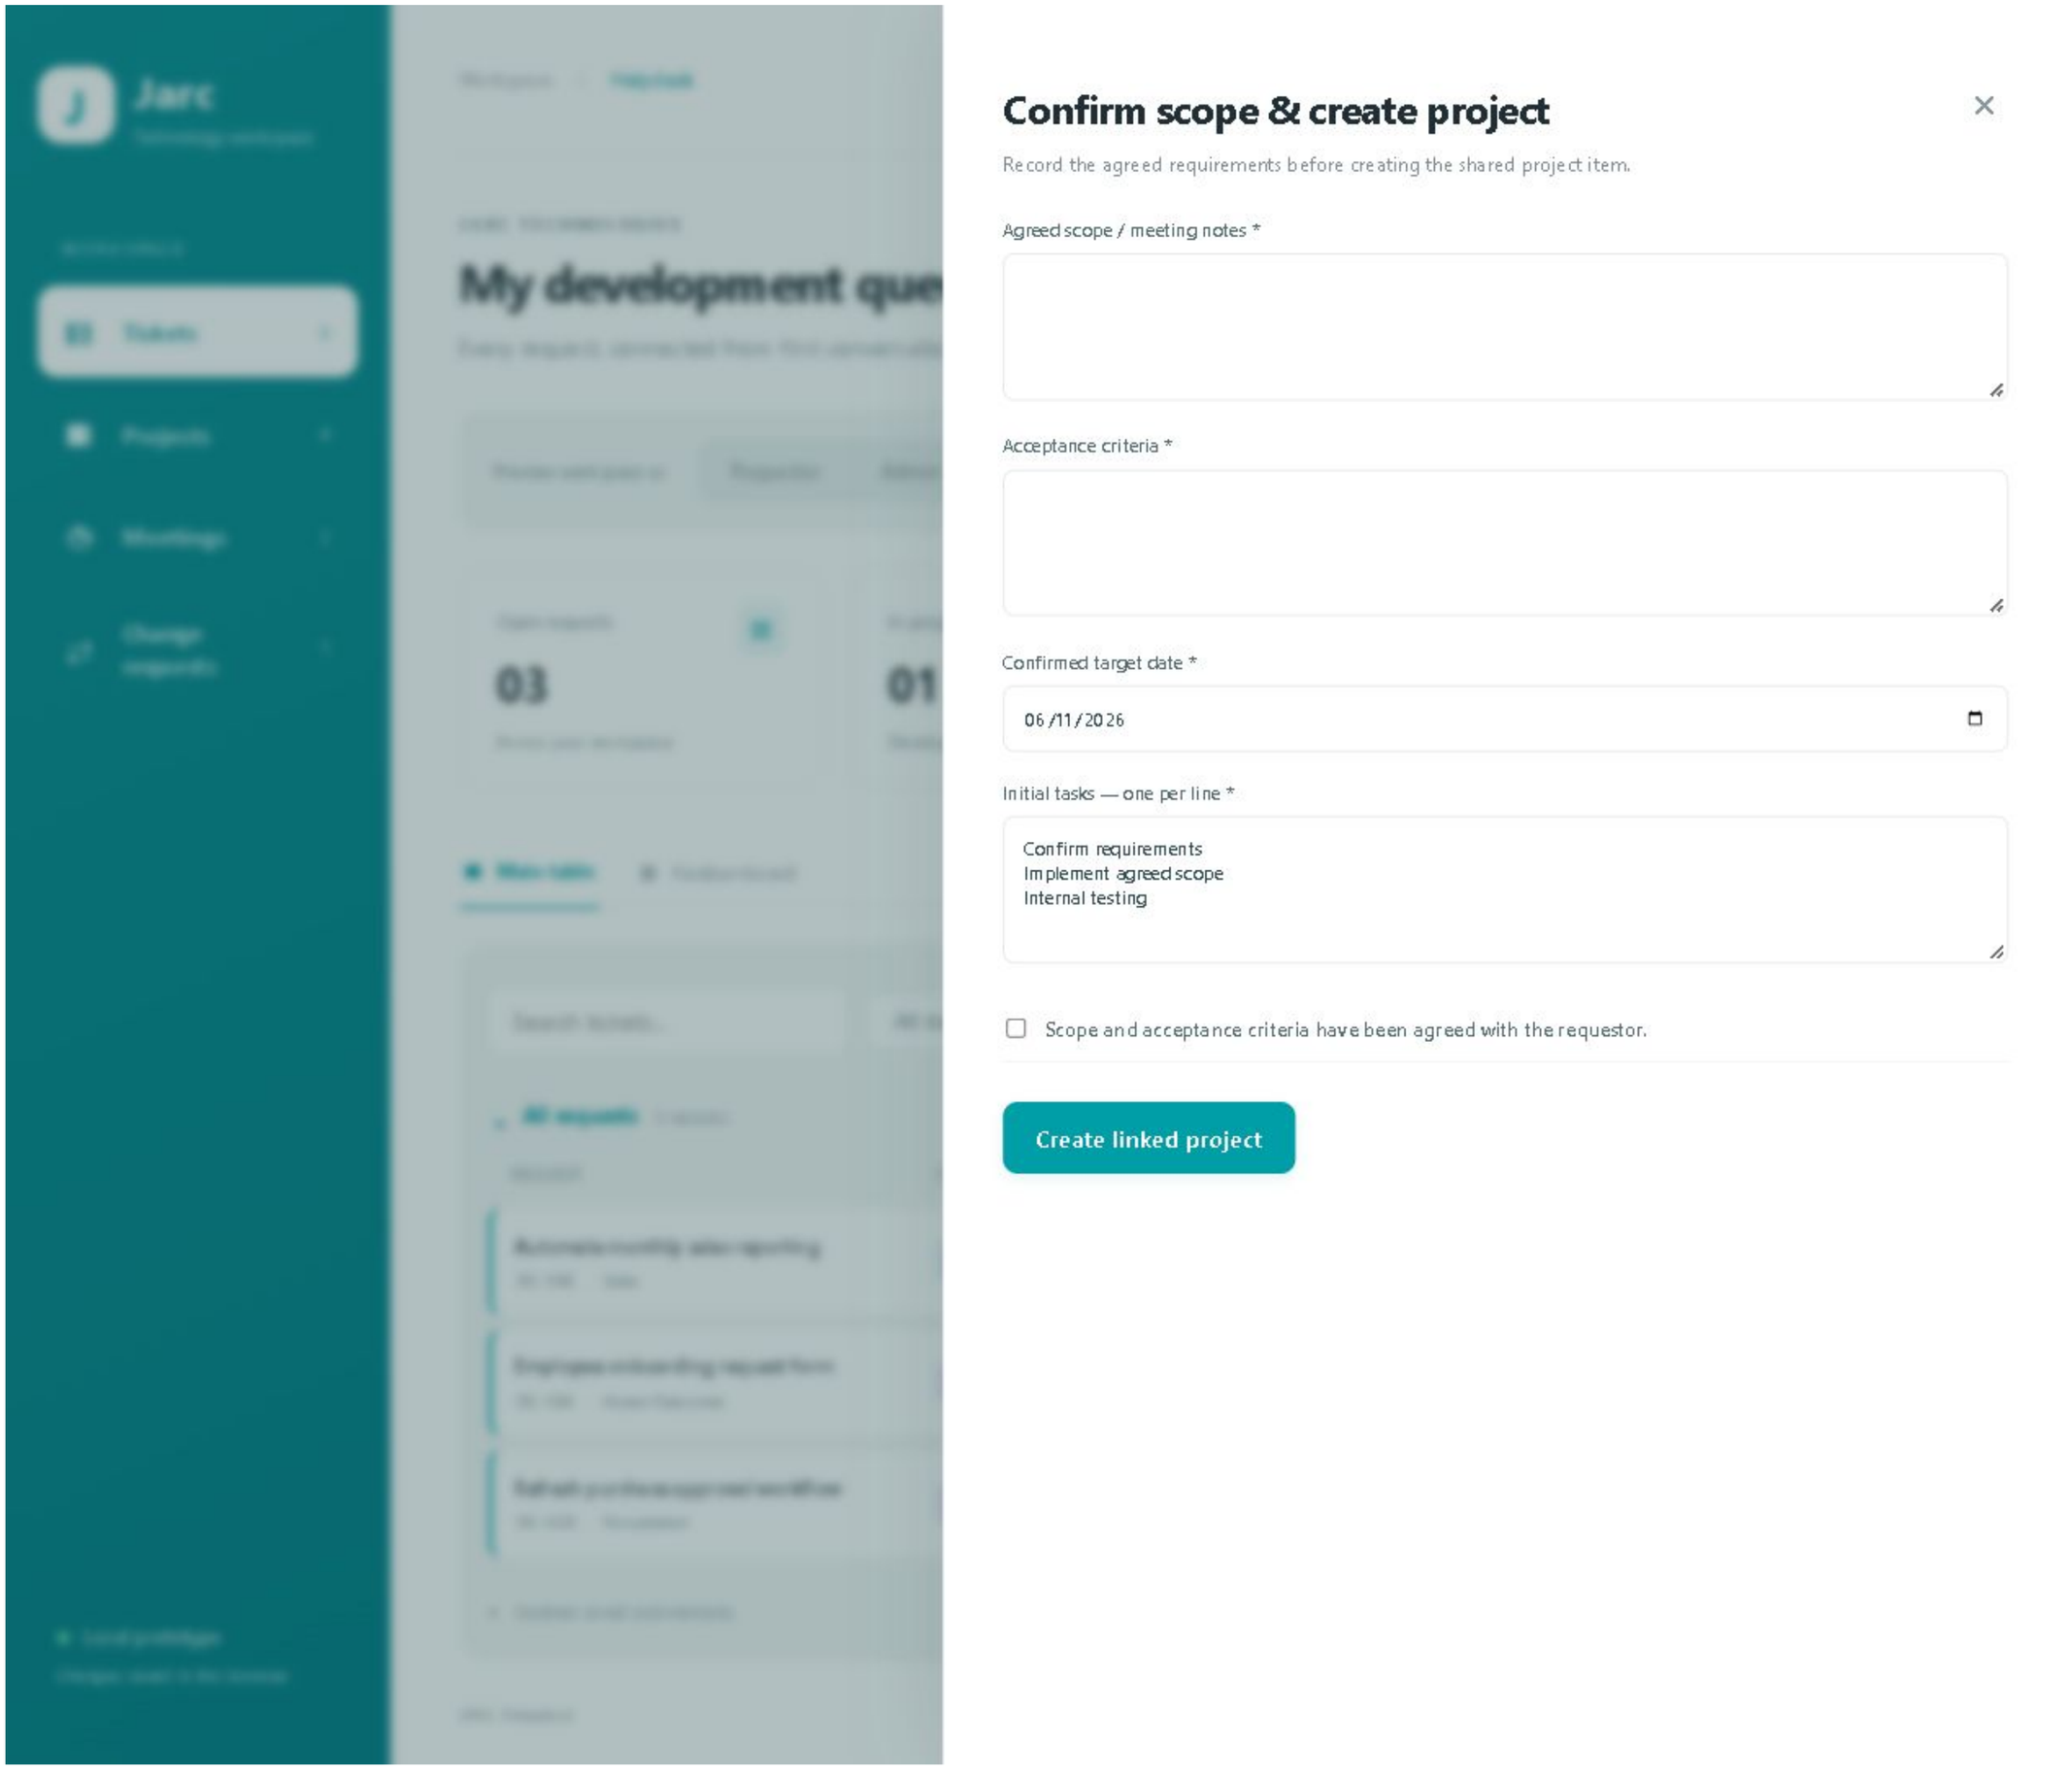

Requestor | Meeting confirmation

LABELS & ACTIONS

Confirm meeting acknowledges the proposed date, time, and location. Shared conversation supports clarification and coordination.

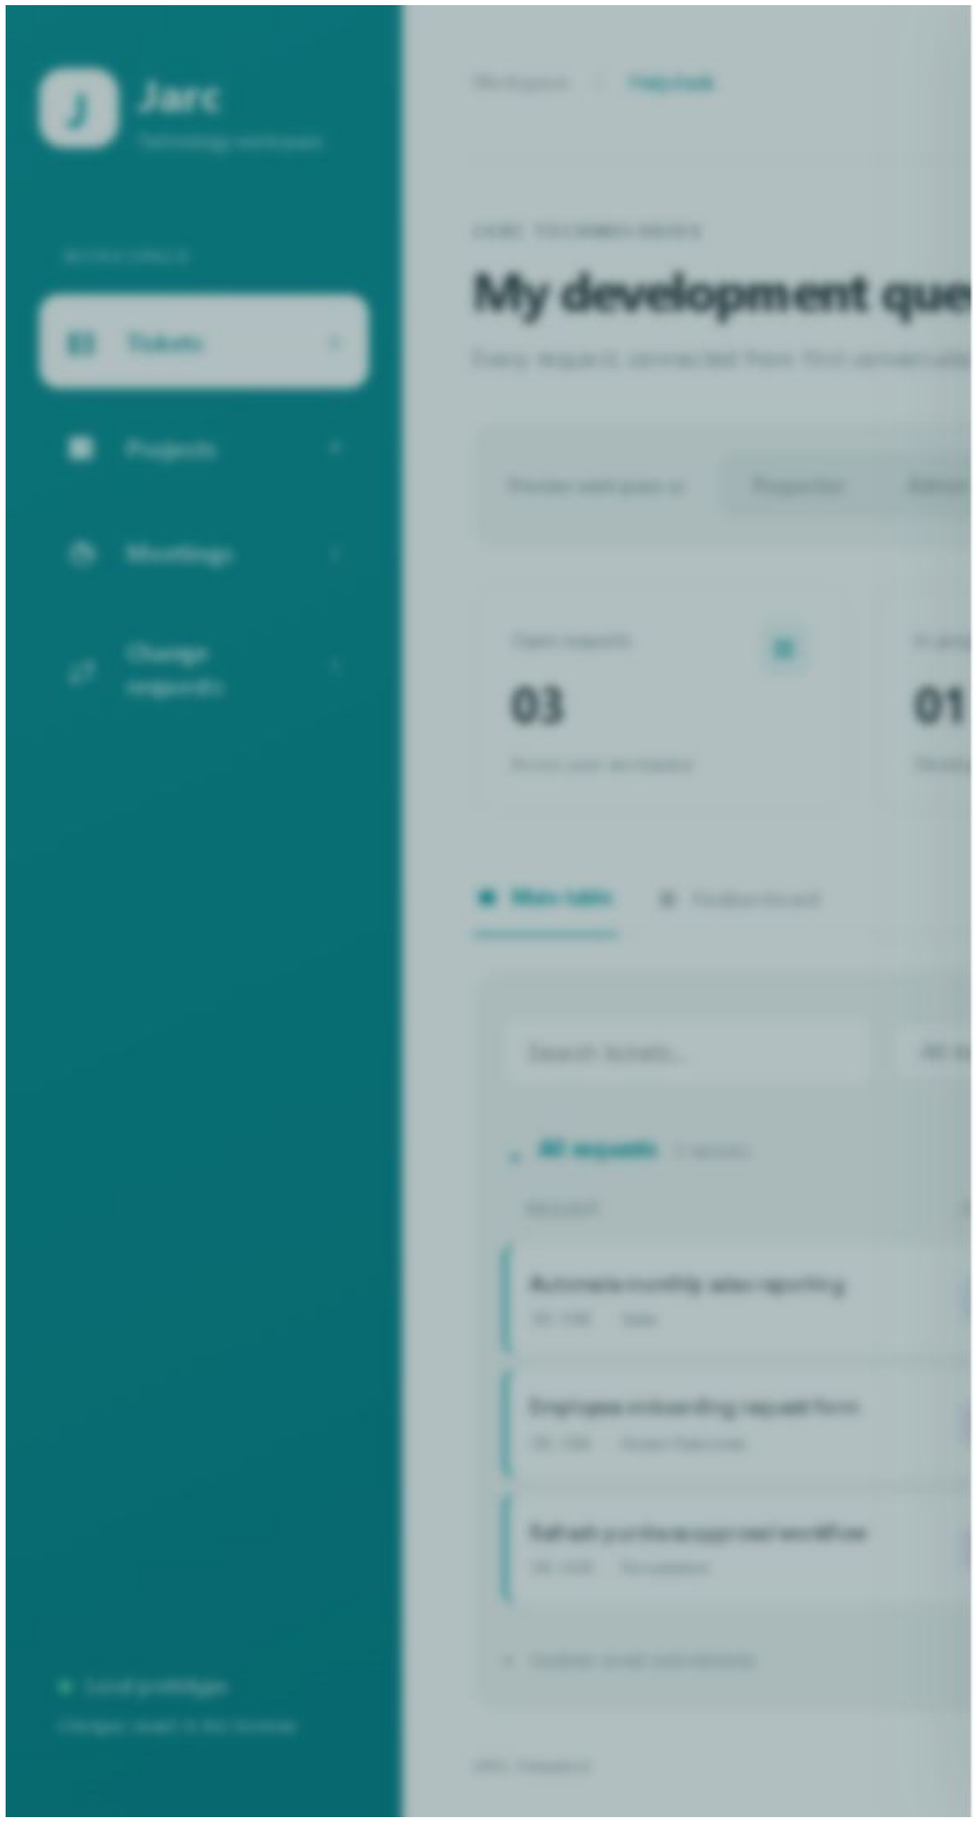

Developer | Confirm scope and create project

LABELS & ACTIONS

Agreed scope / meeting notes documents requirements. Acceptance criteria define completion. Confirmed target date follows estimation. Initial tasks uses one task per line. Agreement must be checked before Create linked project.

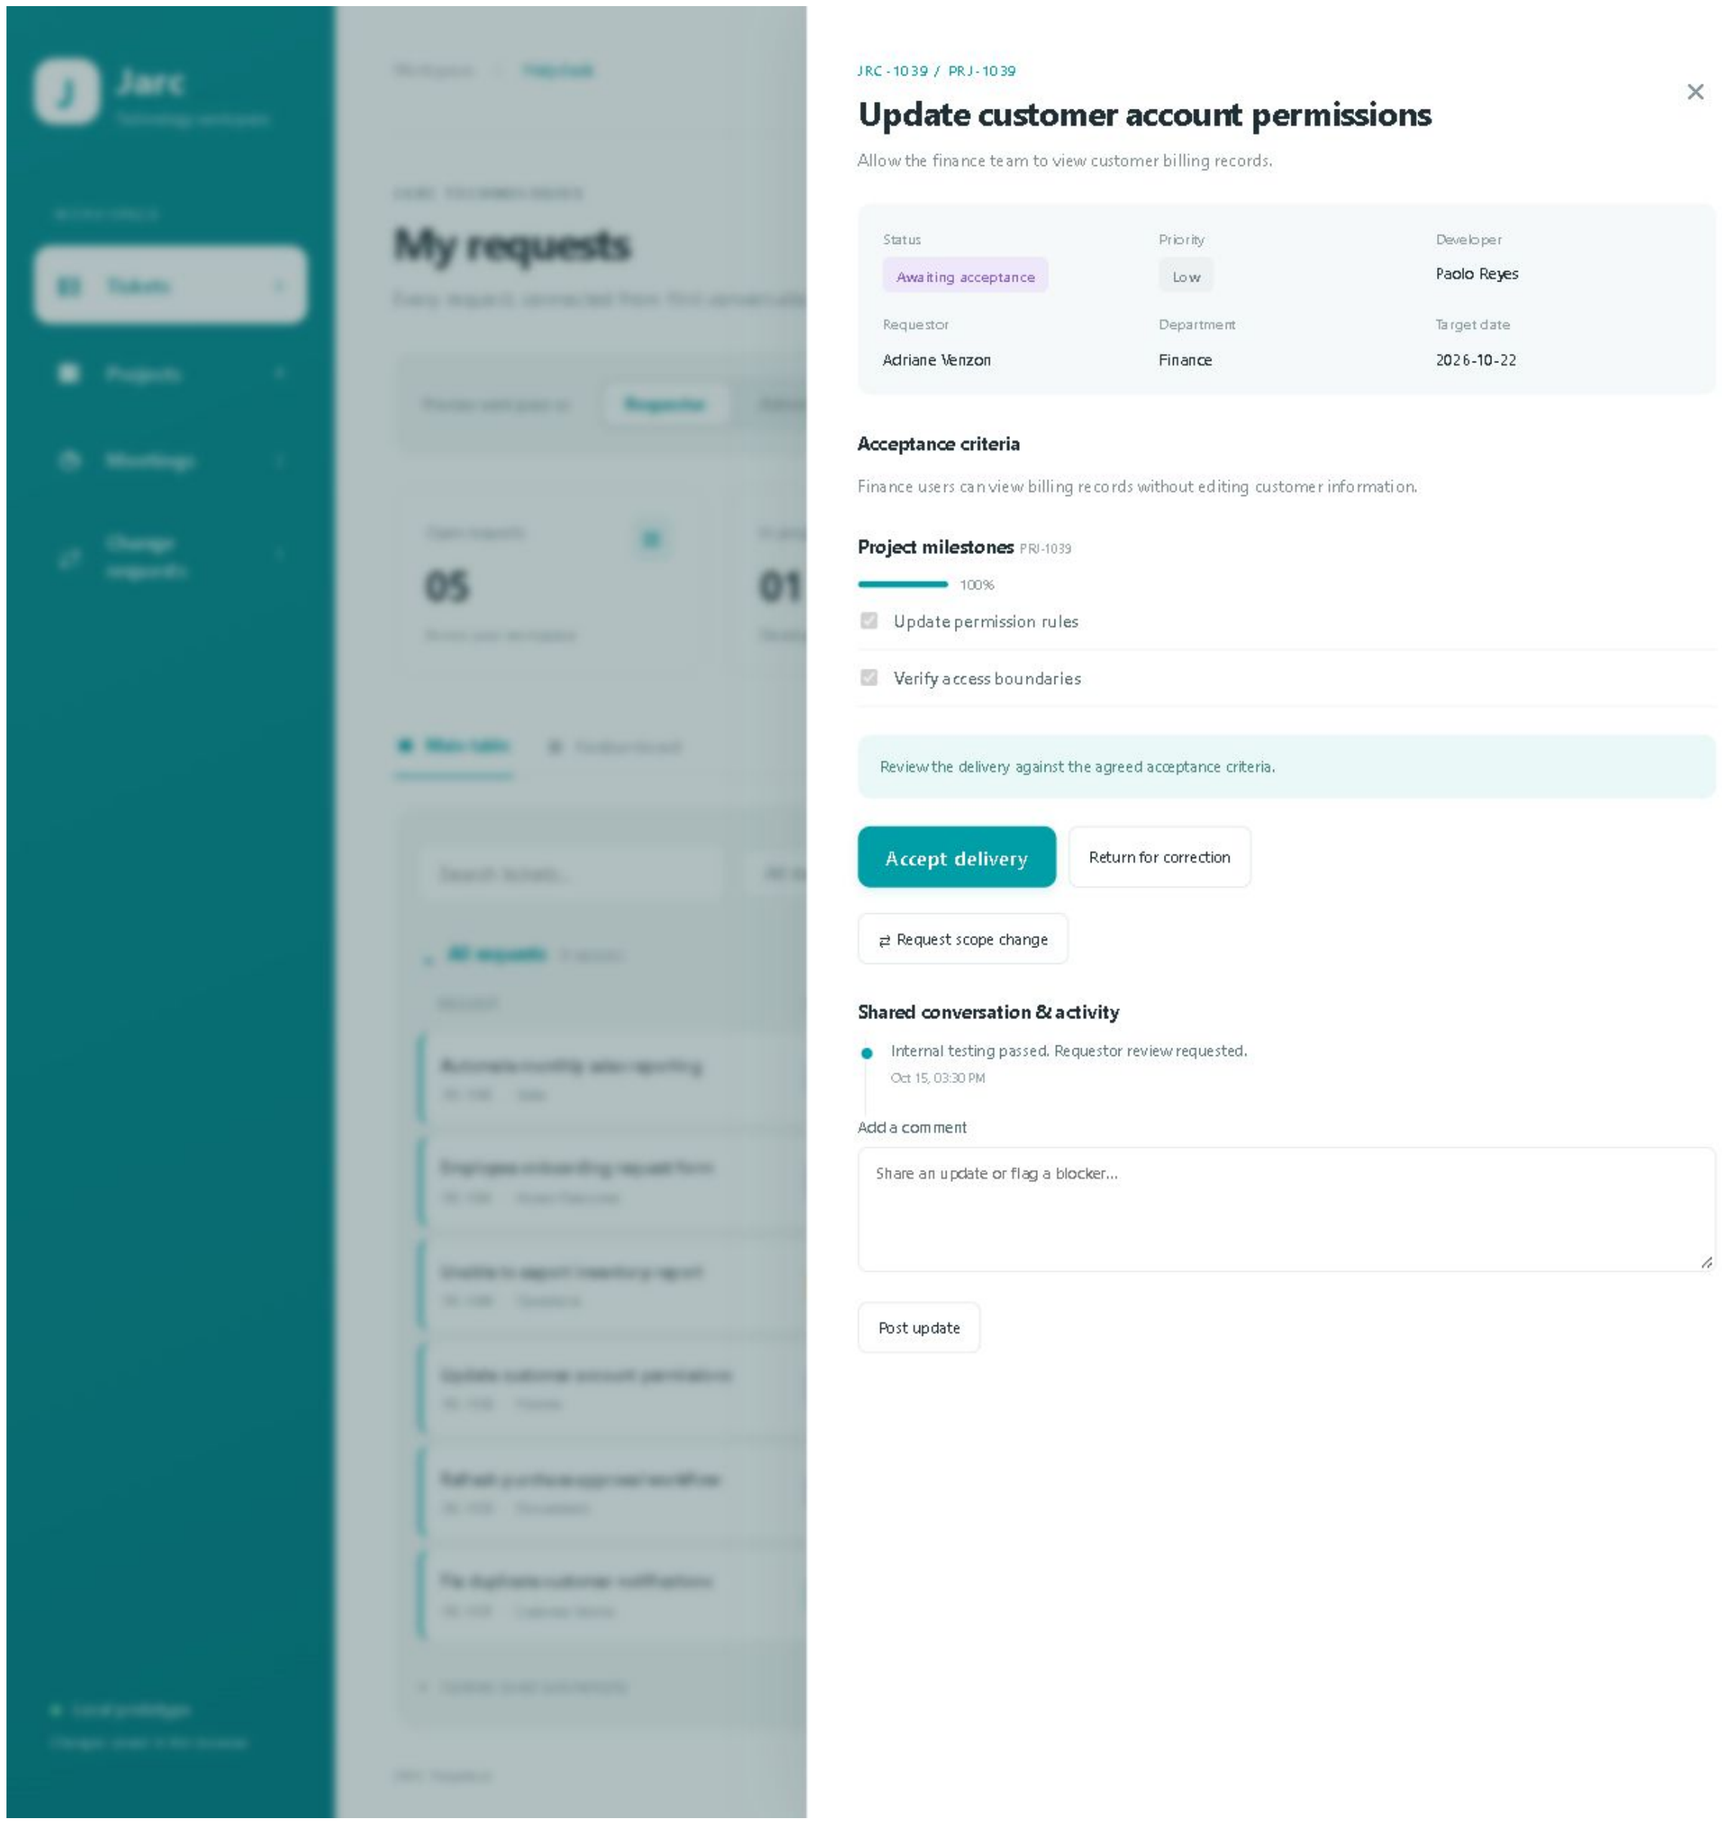

Developer | Submit delivery for acceptance

LABELS & ACTIONS

Testing summary and delivery instructions explain the verification results and where to review delivery. Internal testing passed must be checked. Request acceptance moves the ticket to requestor review.

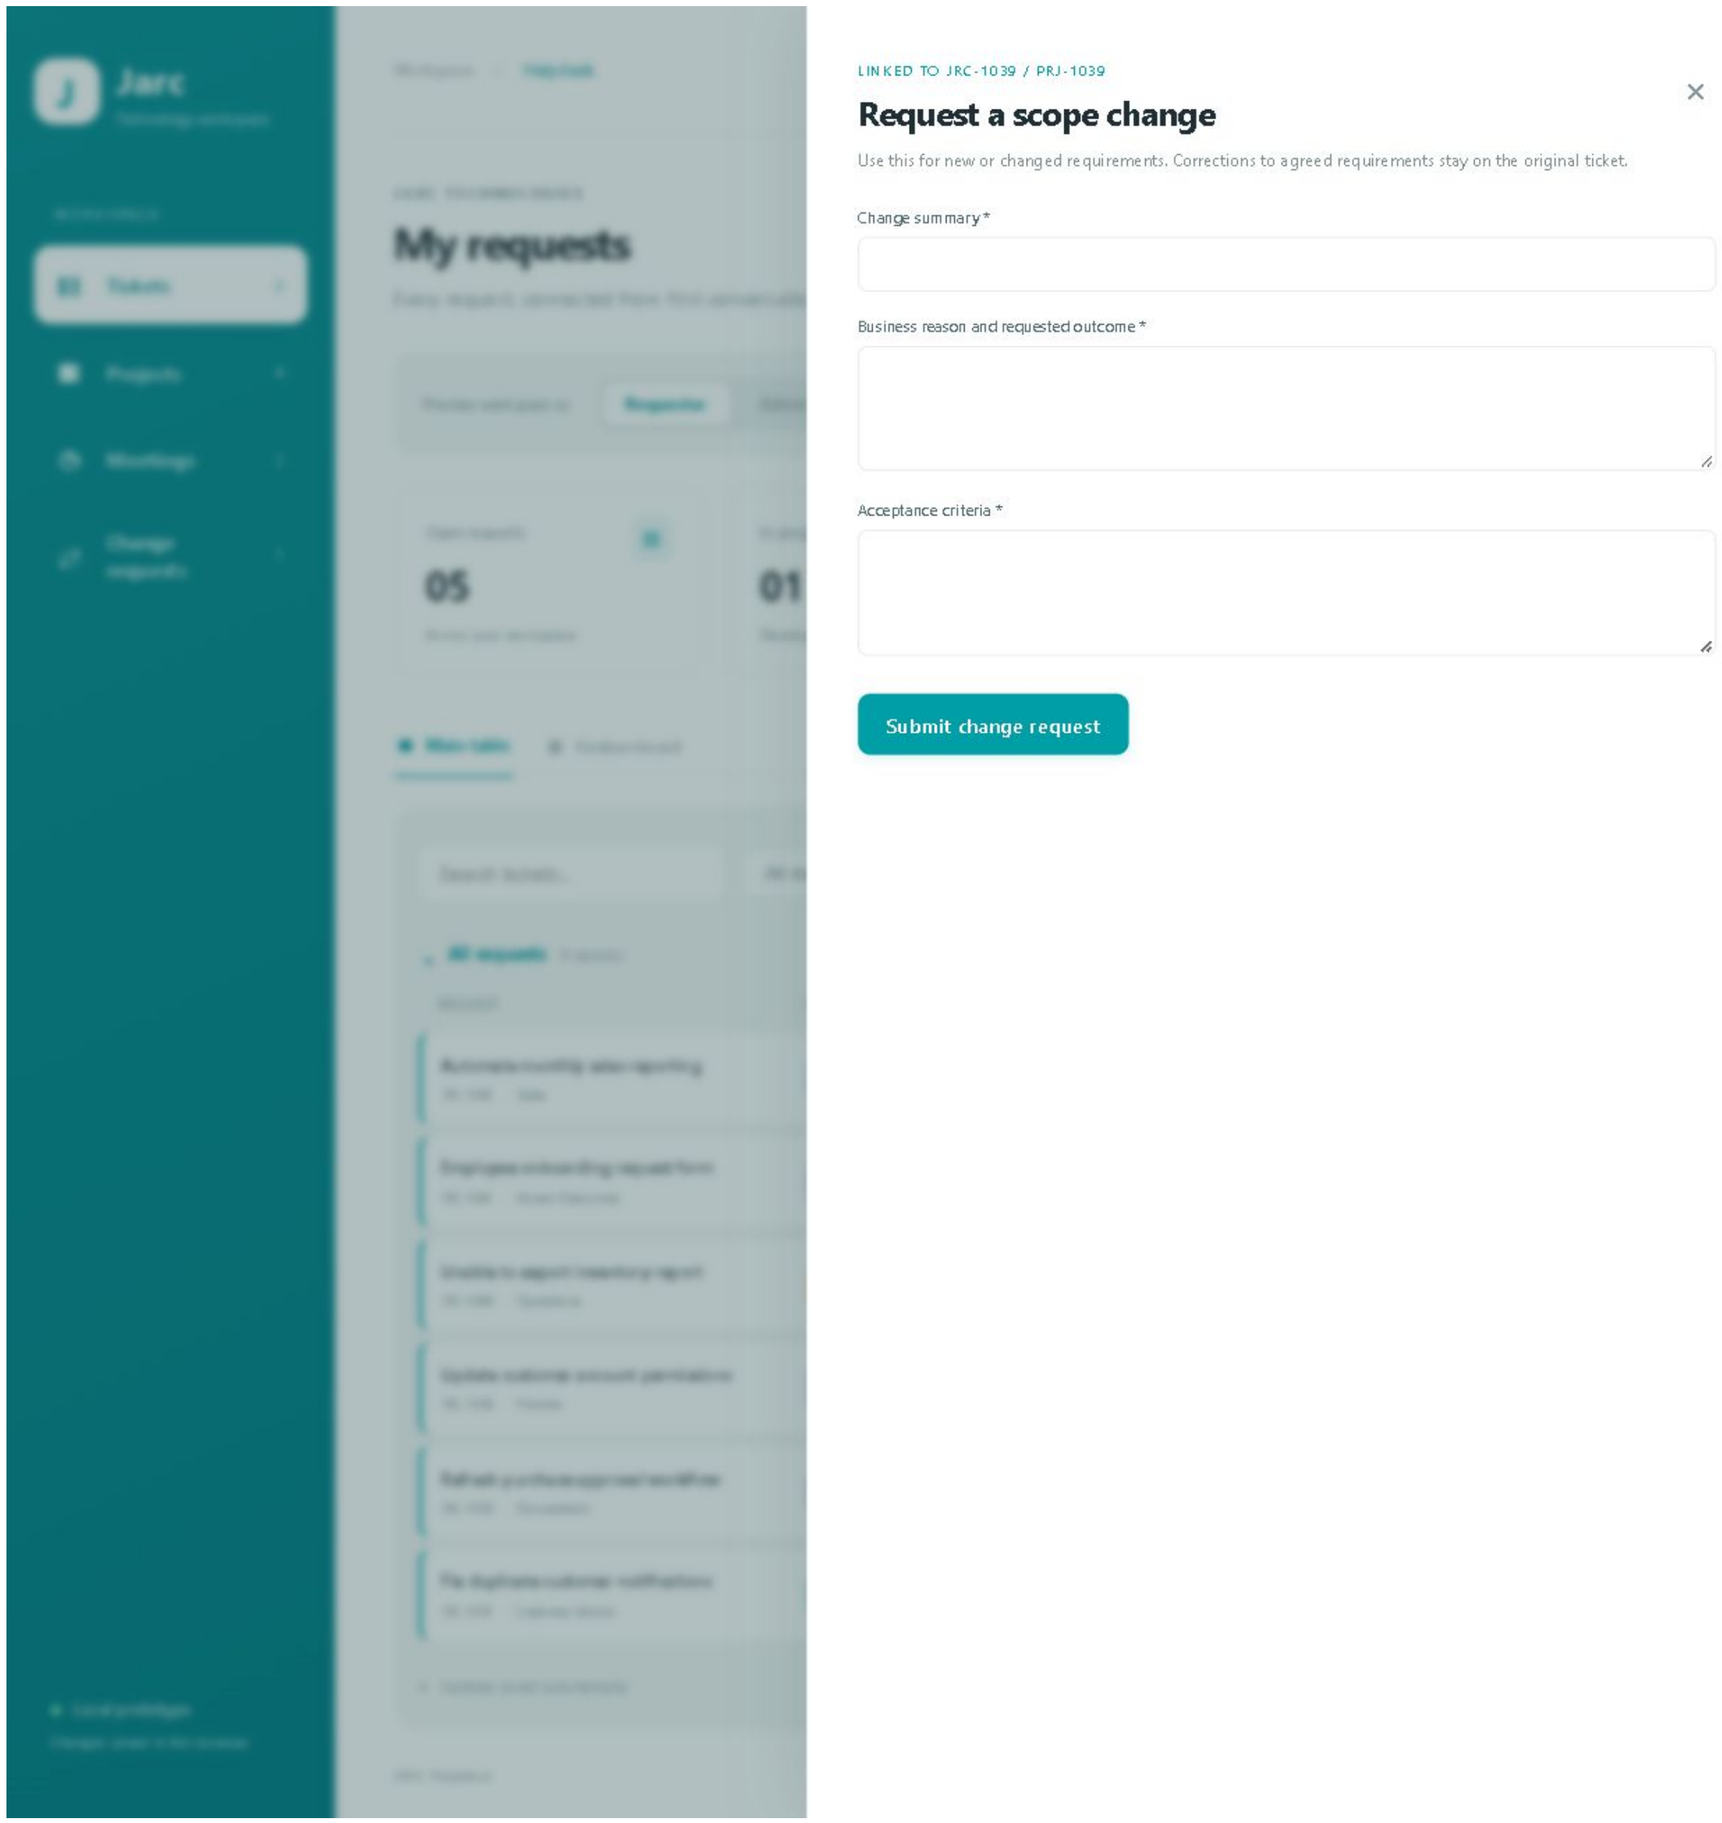

Requestor | Delivery acceptance

LABELS & ACTIONS

Accept delivery confirms agreed requirements were met and moves work to Ready for release. Return for correction requires a reason and returns work to development. Request scope change creates a separate linked change.

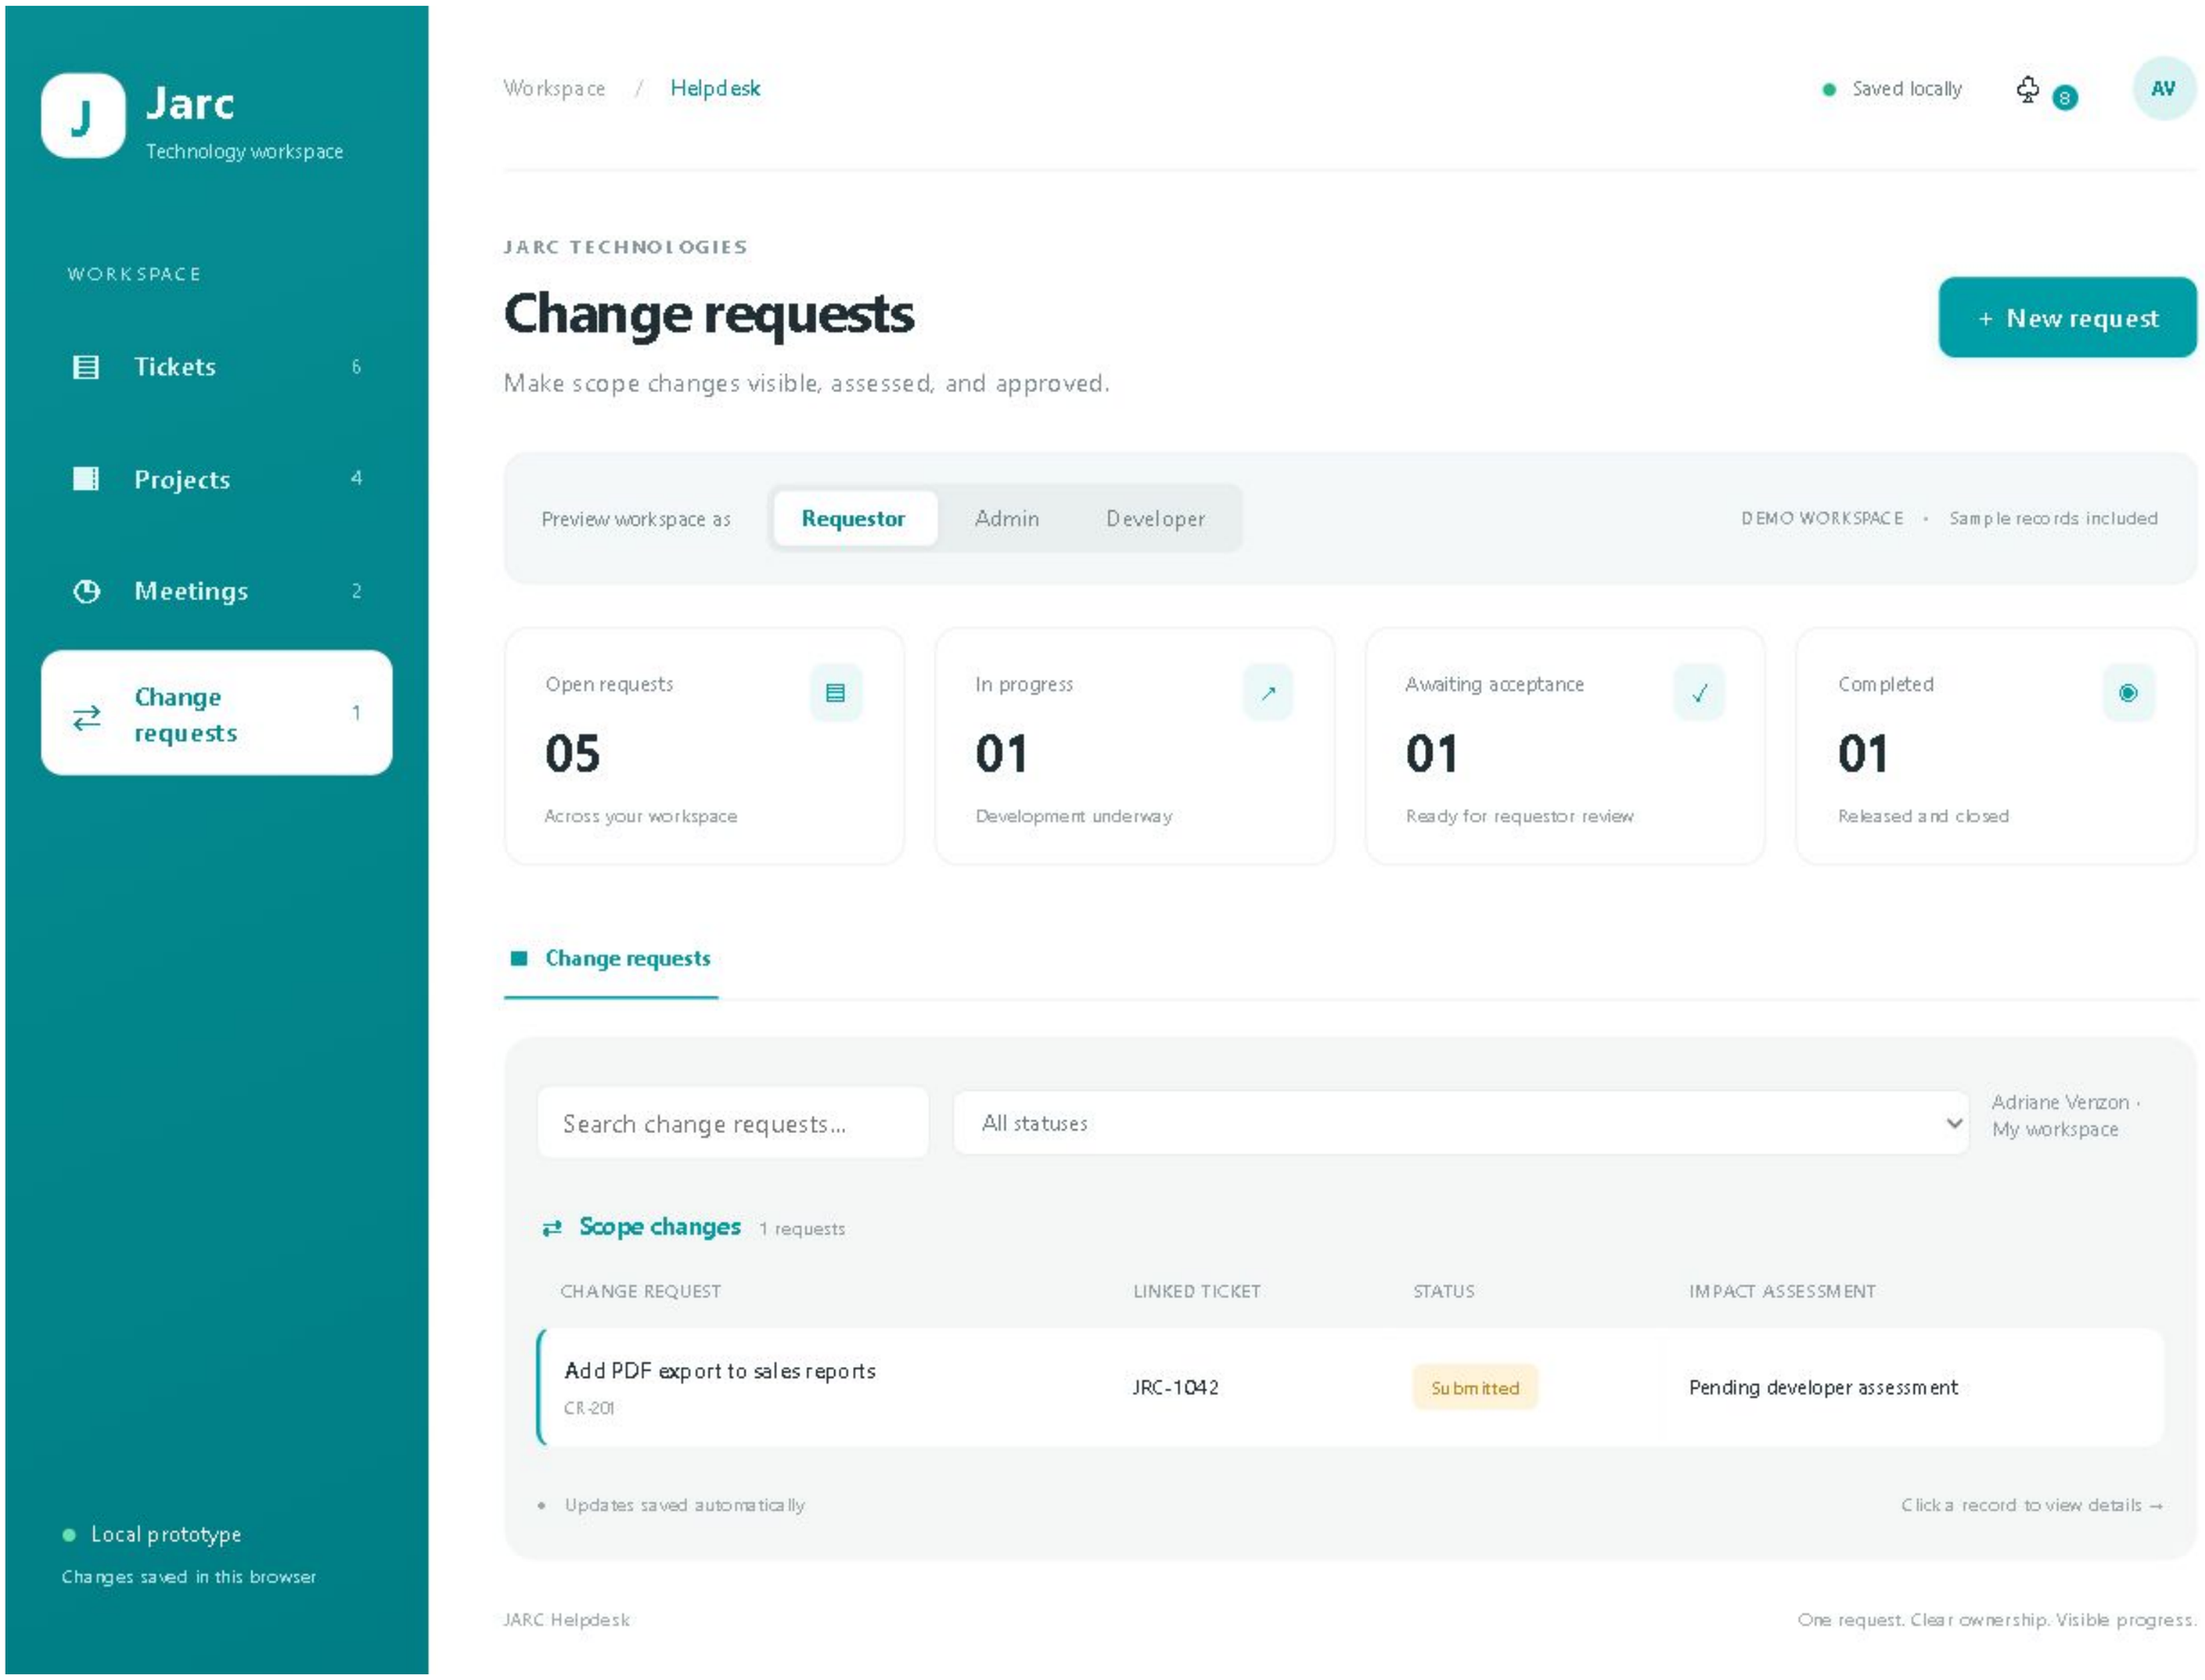

Requestor | New scope change form

LABELS & ACTIONS

Change summary names the new requirement. Business reason and requested outcome explain its value. Acceptance criteria define completion. Submit change request sends it to admin review without silently changing the original scope.

Shared | Change requests list

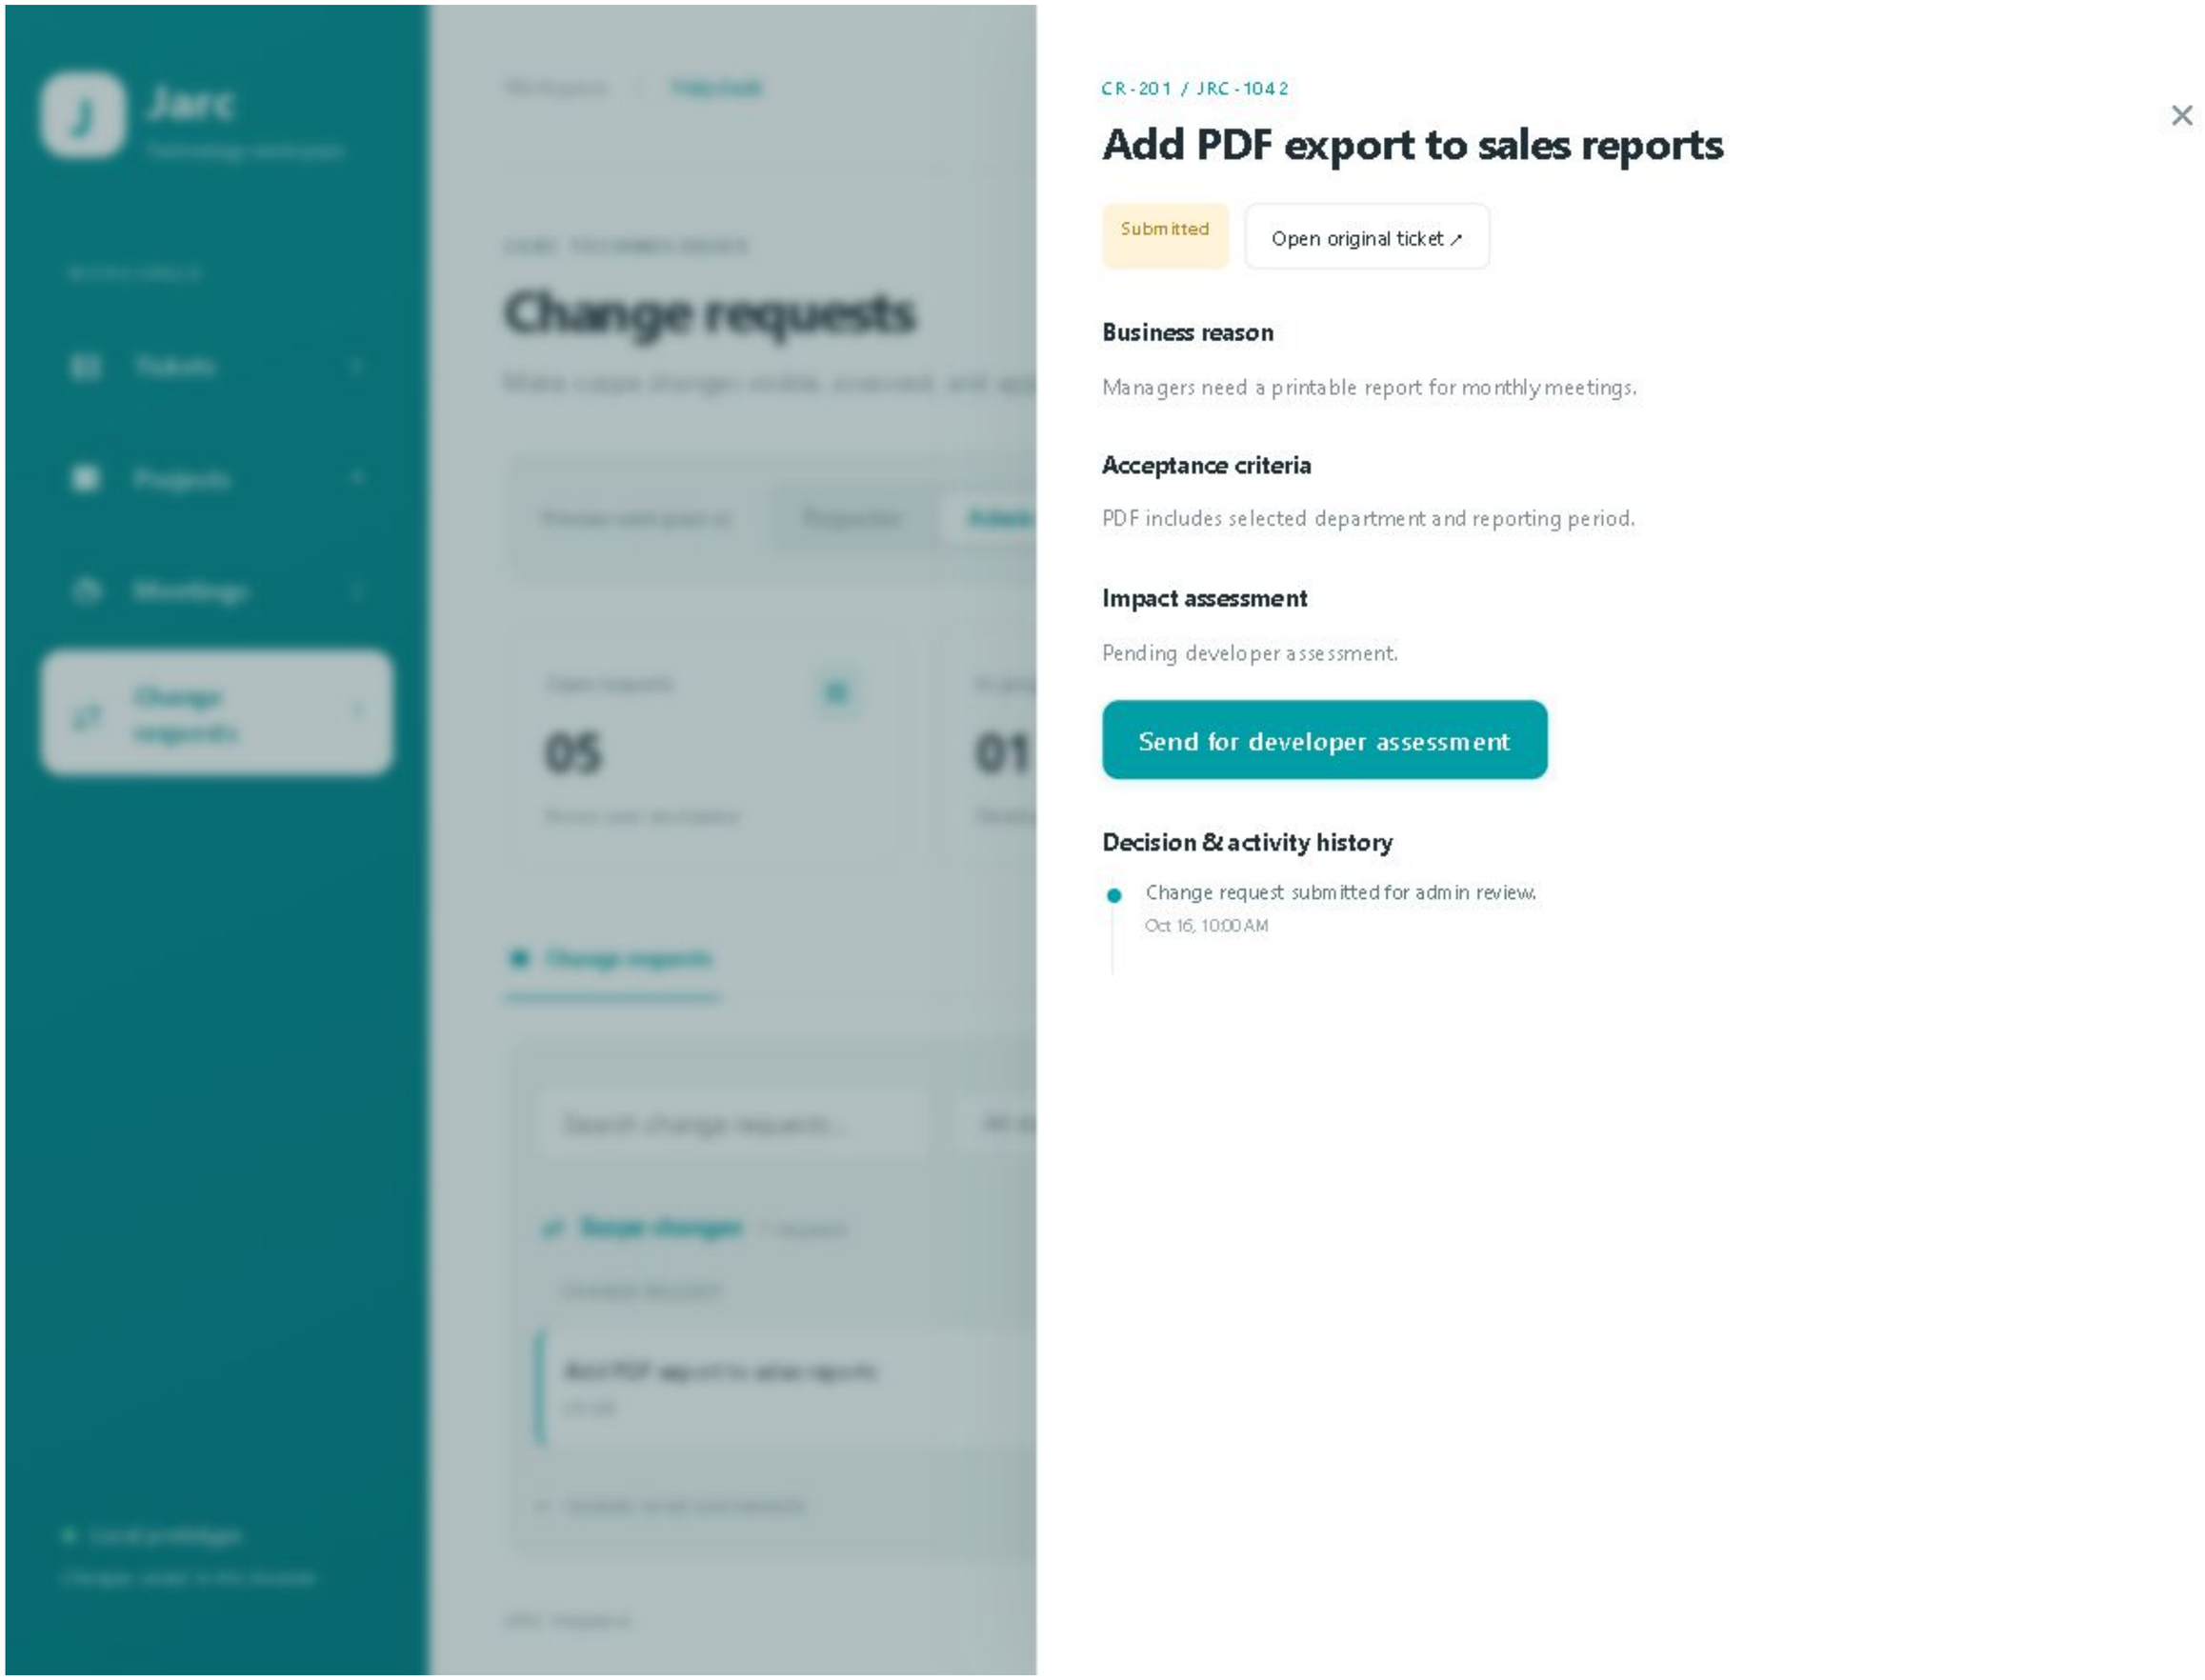

LABELS & ACTIONS

Change request identifies the scope change. Linked ticket points to the original request. Status tracks approval and delivery. Impact assessment summarizes effort, dates, dependencies, and effects on current work.

JARC / HELPDESK

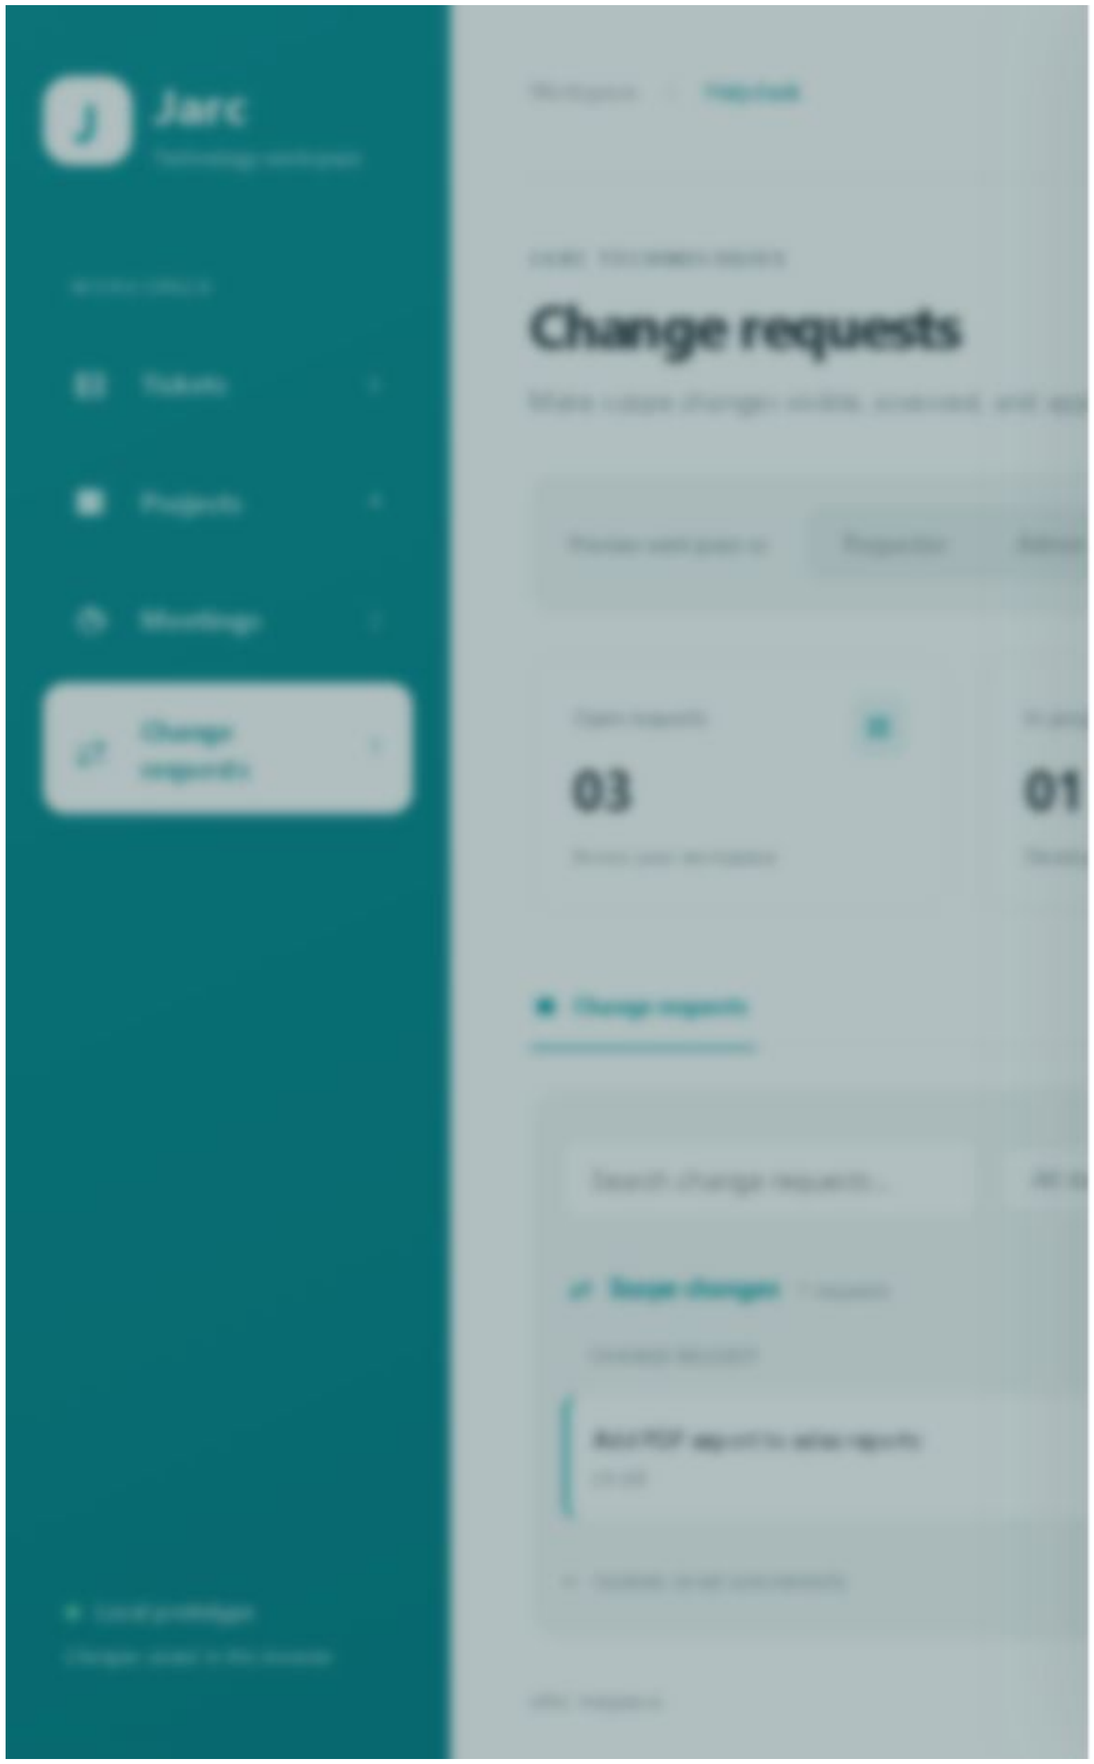

Admin | Change request triage

LABELS & ACTIONS

Open original ticket provides context. Business reason and Acceptance criteria describe the change. Send for developer assessment requests an impact review. Decision & activity history records the audit trail.

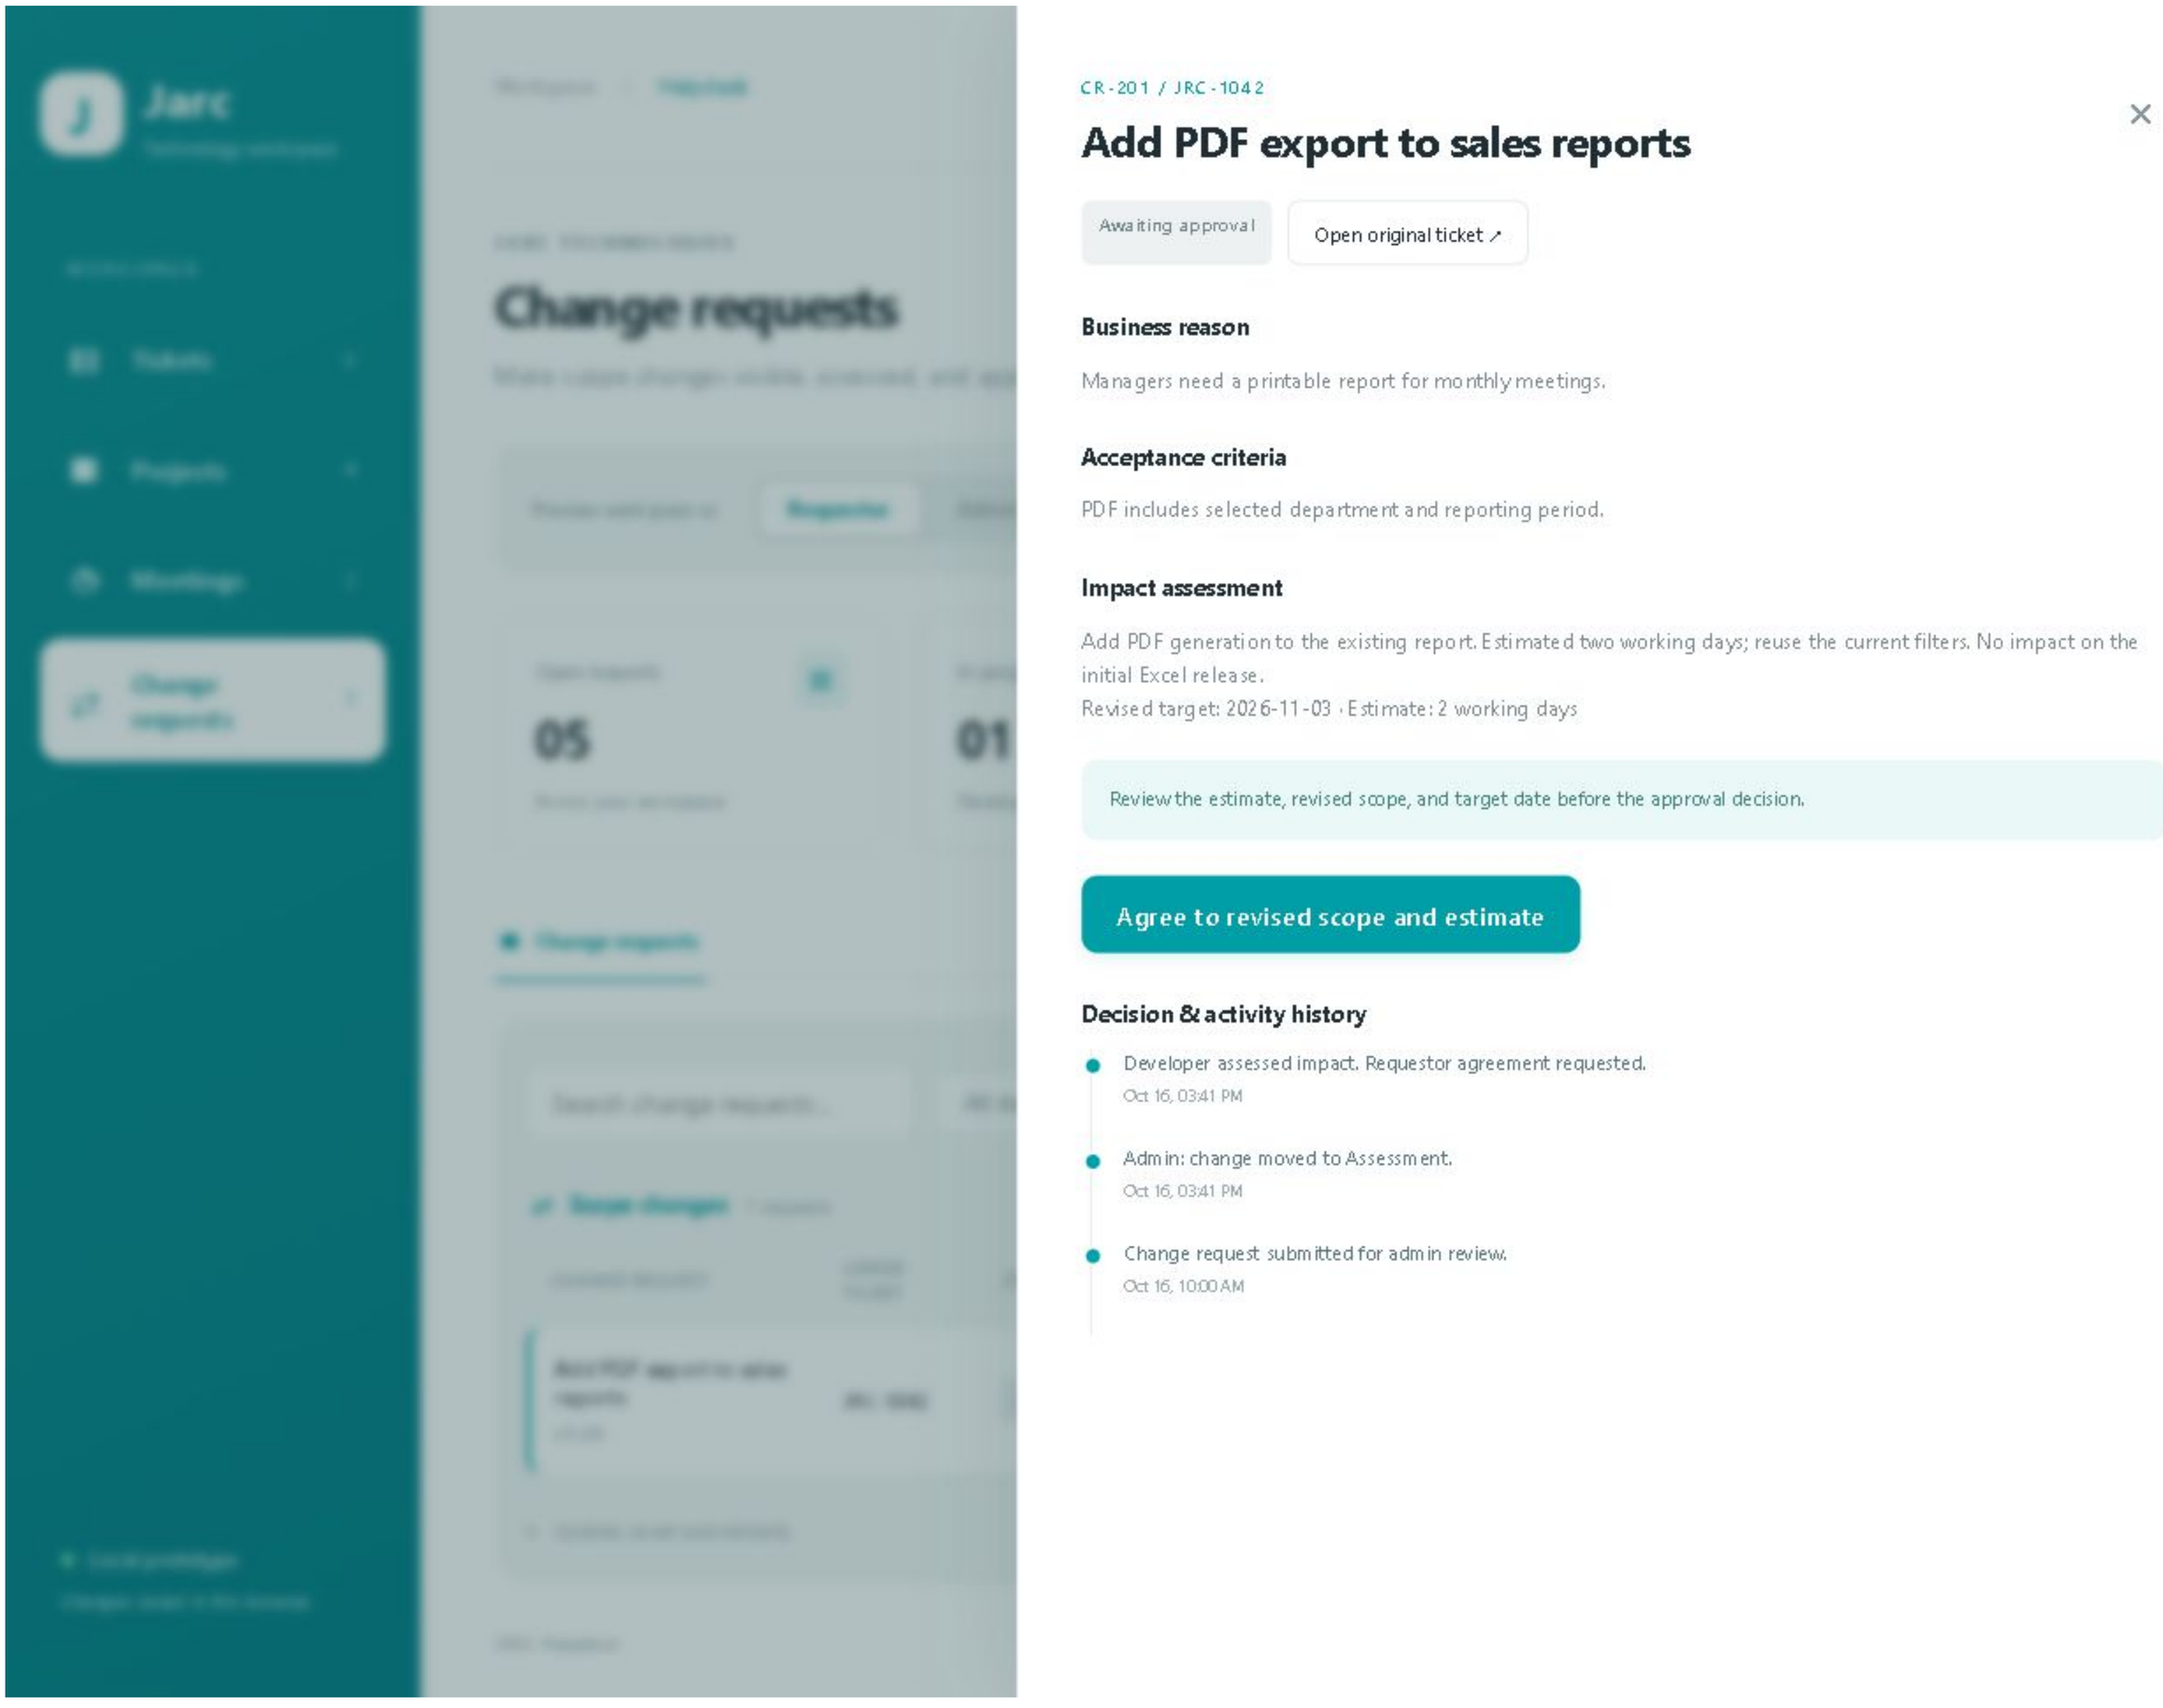

Developer | Change impact assessment

LABELS & ACTIONS

Scope, dependencies, risks, and impact on existing work records the assessment. Effort estimate and Revised delivery date are required. Send impact assessment to requestor requests agreement before admin approval.

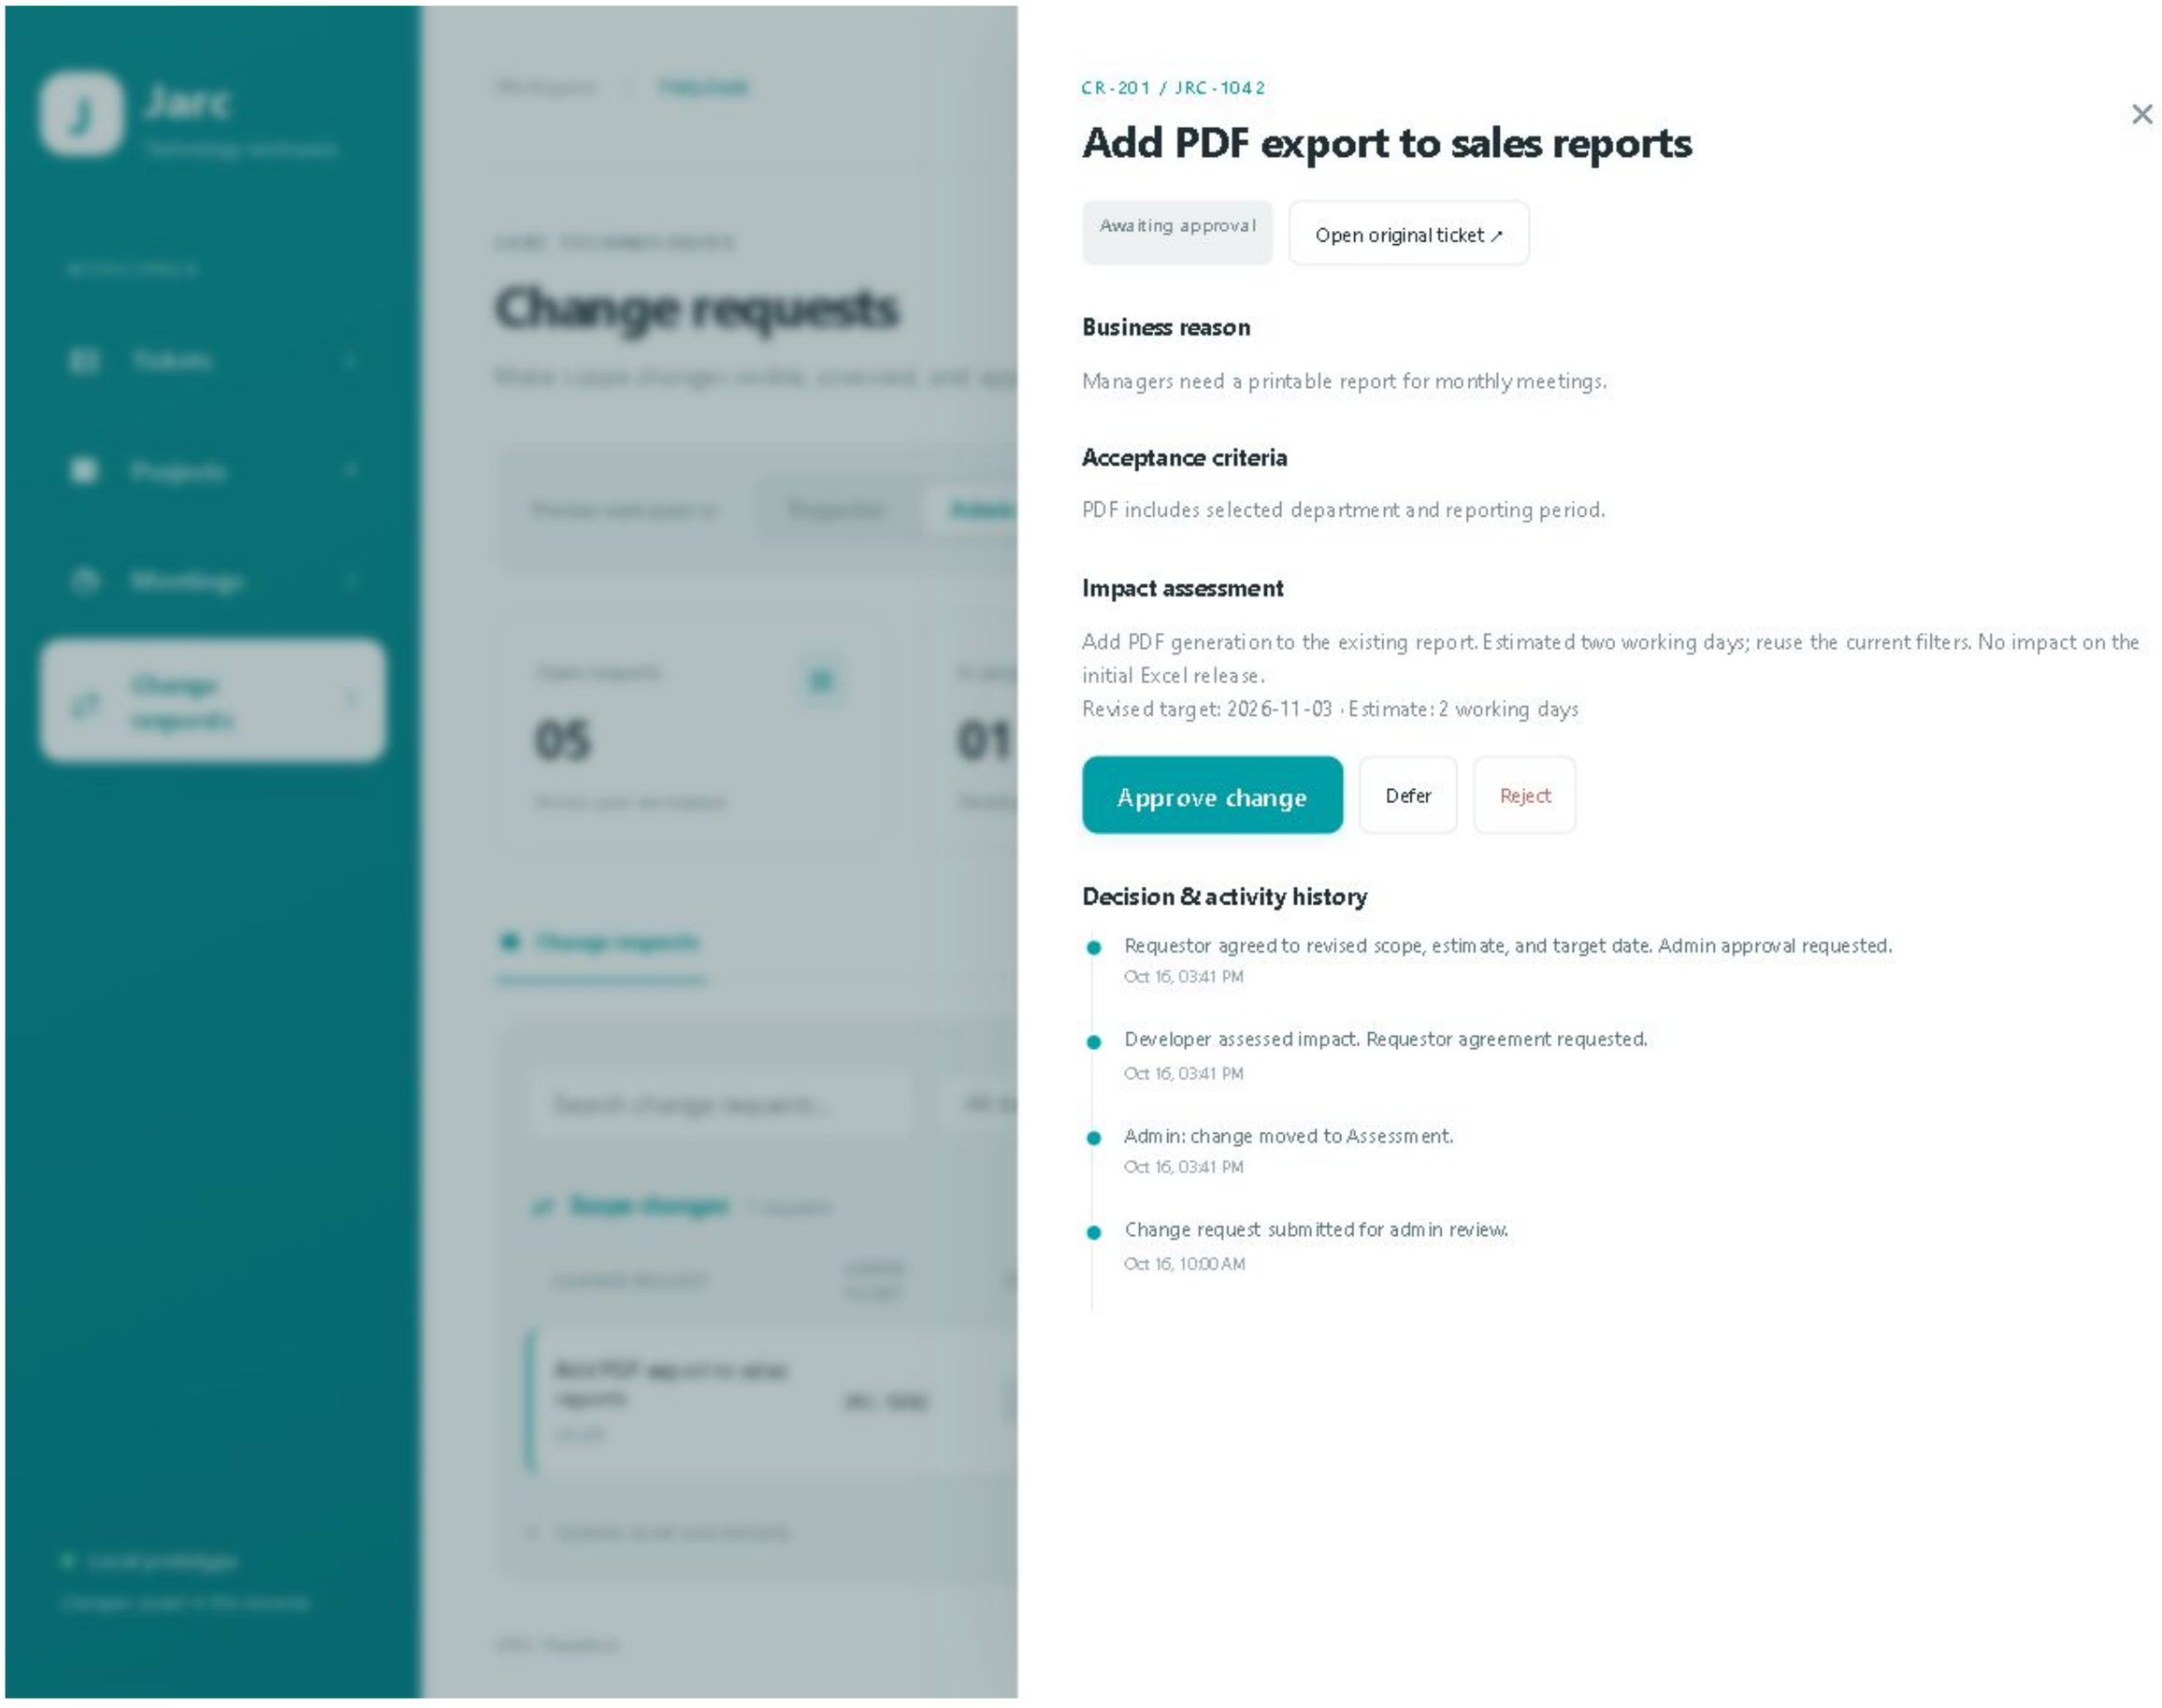

Requestor | Review revised scope and estimate

LABELS & ACTIONS

Review the developer impact assessment, revised target date, and effort estimate. Agree to revised scope and estimate records requestor agreement; it does not replace admin approval.

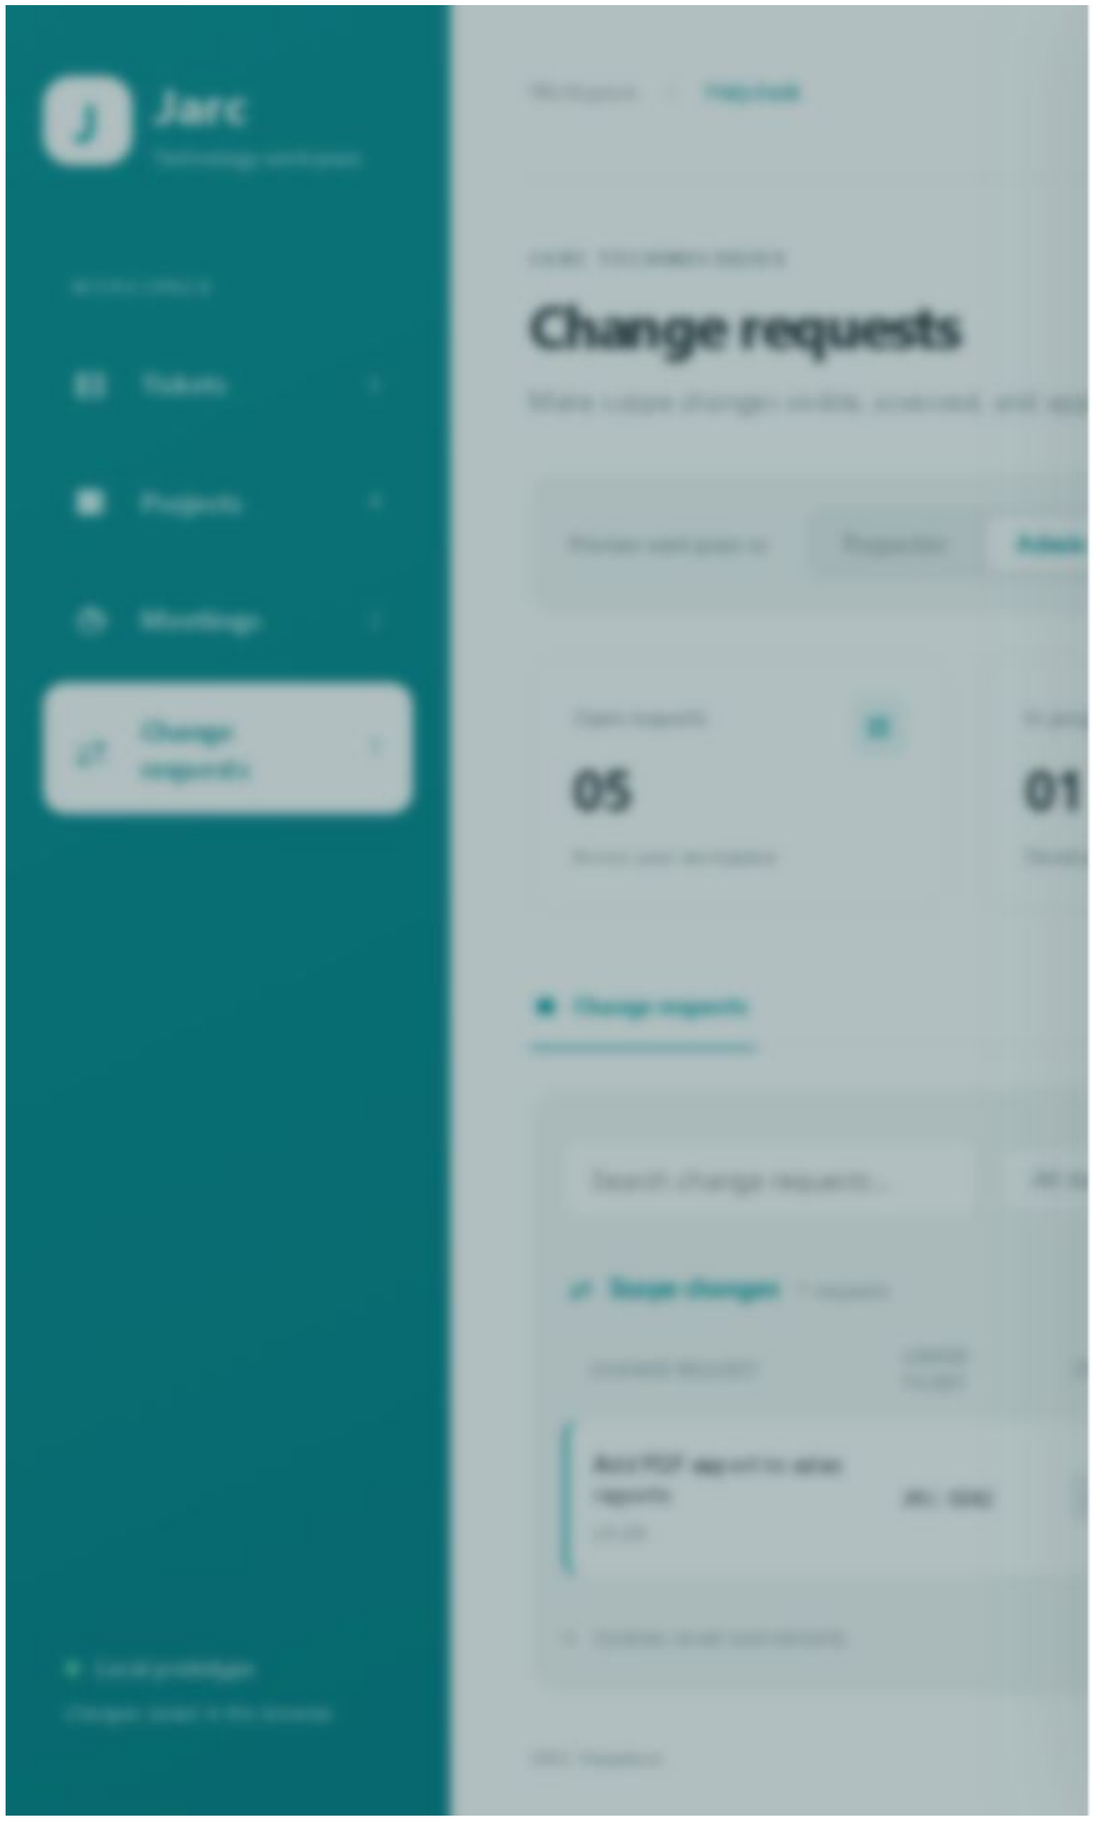

Admin | Approve, defer, or reject change

LABELS & ACTIONS

Approve change adds the approved work to the project plan. Defer places it in the backlog with a review date. Reject records a reason. Requestor agreement is required before approval appears.

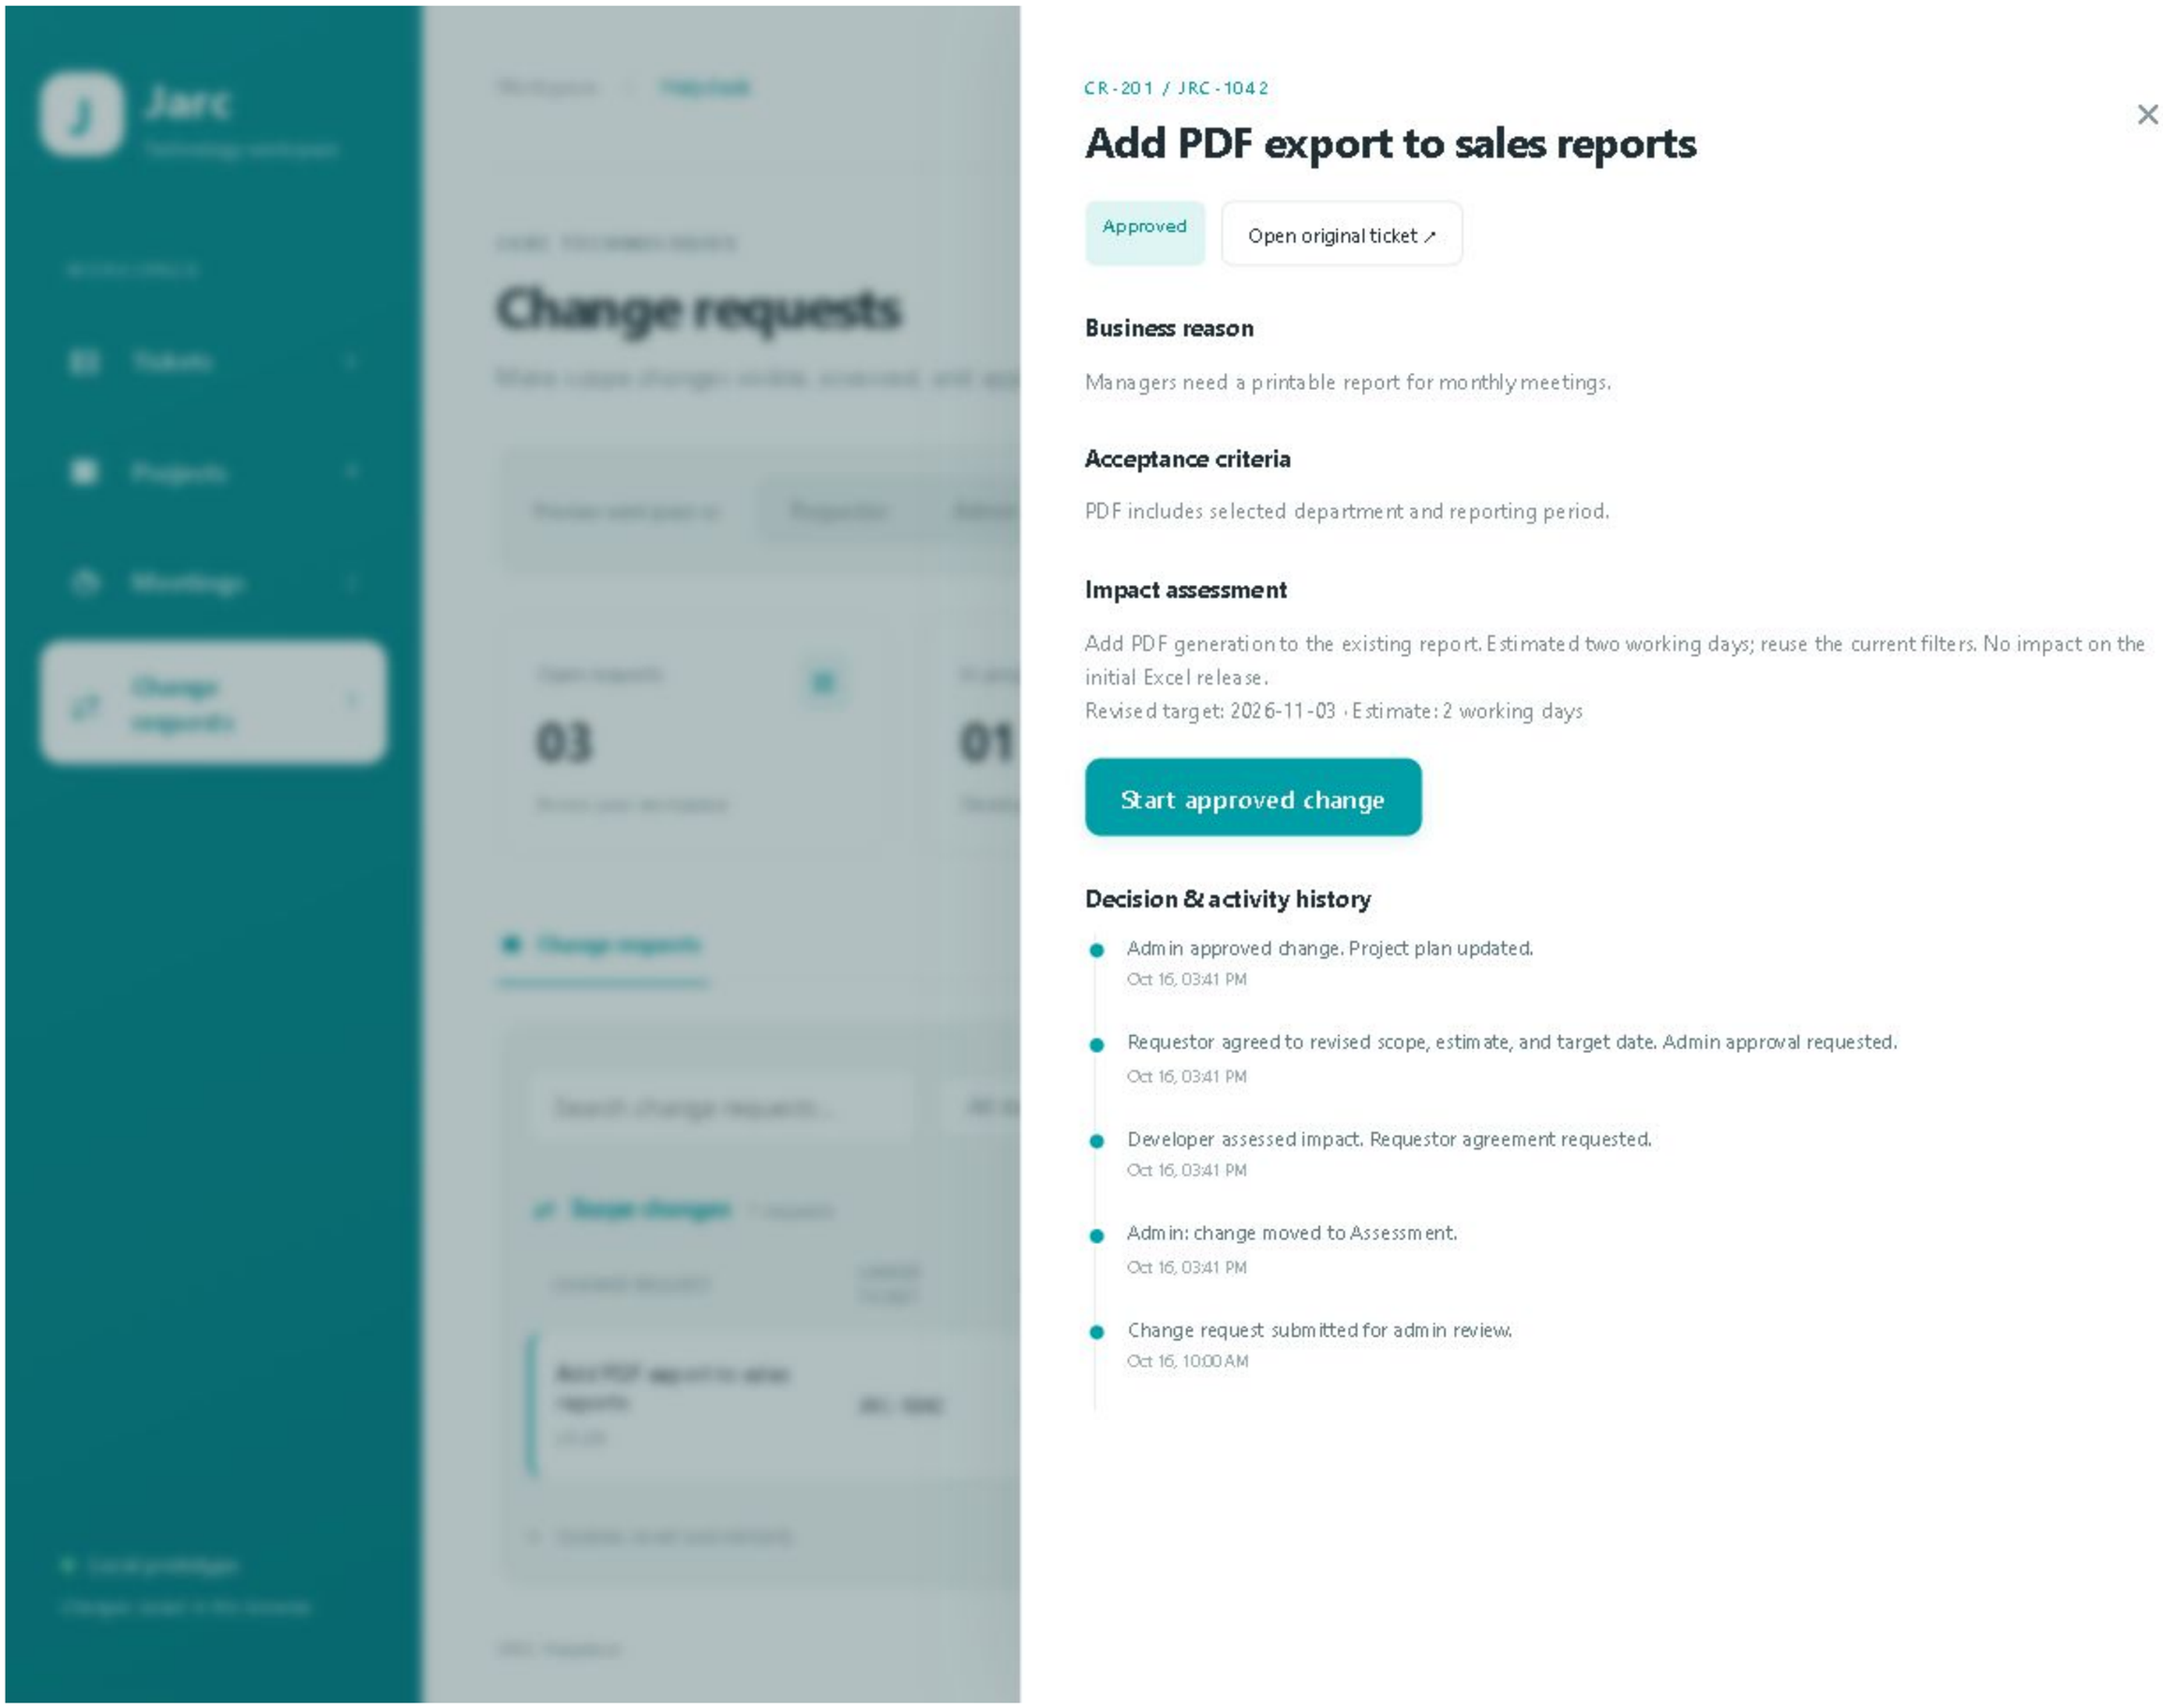

Admin | Defer change decision form

LABELS & ACTIONS

Reason records why the change is deferred. Review date defines when it should be reconsidered. Record decision saves the audit entry and notification.

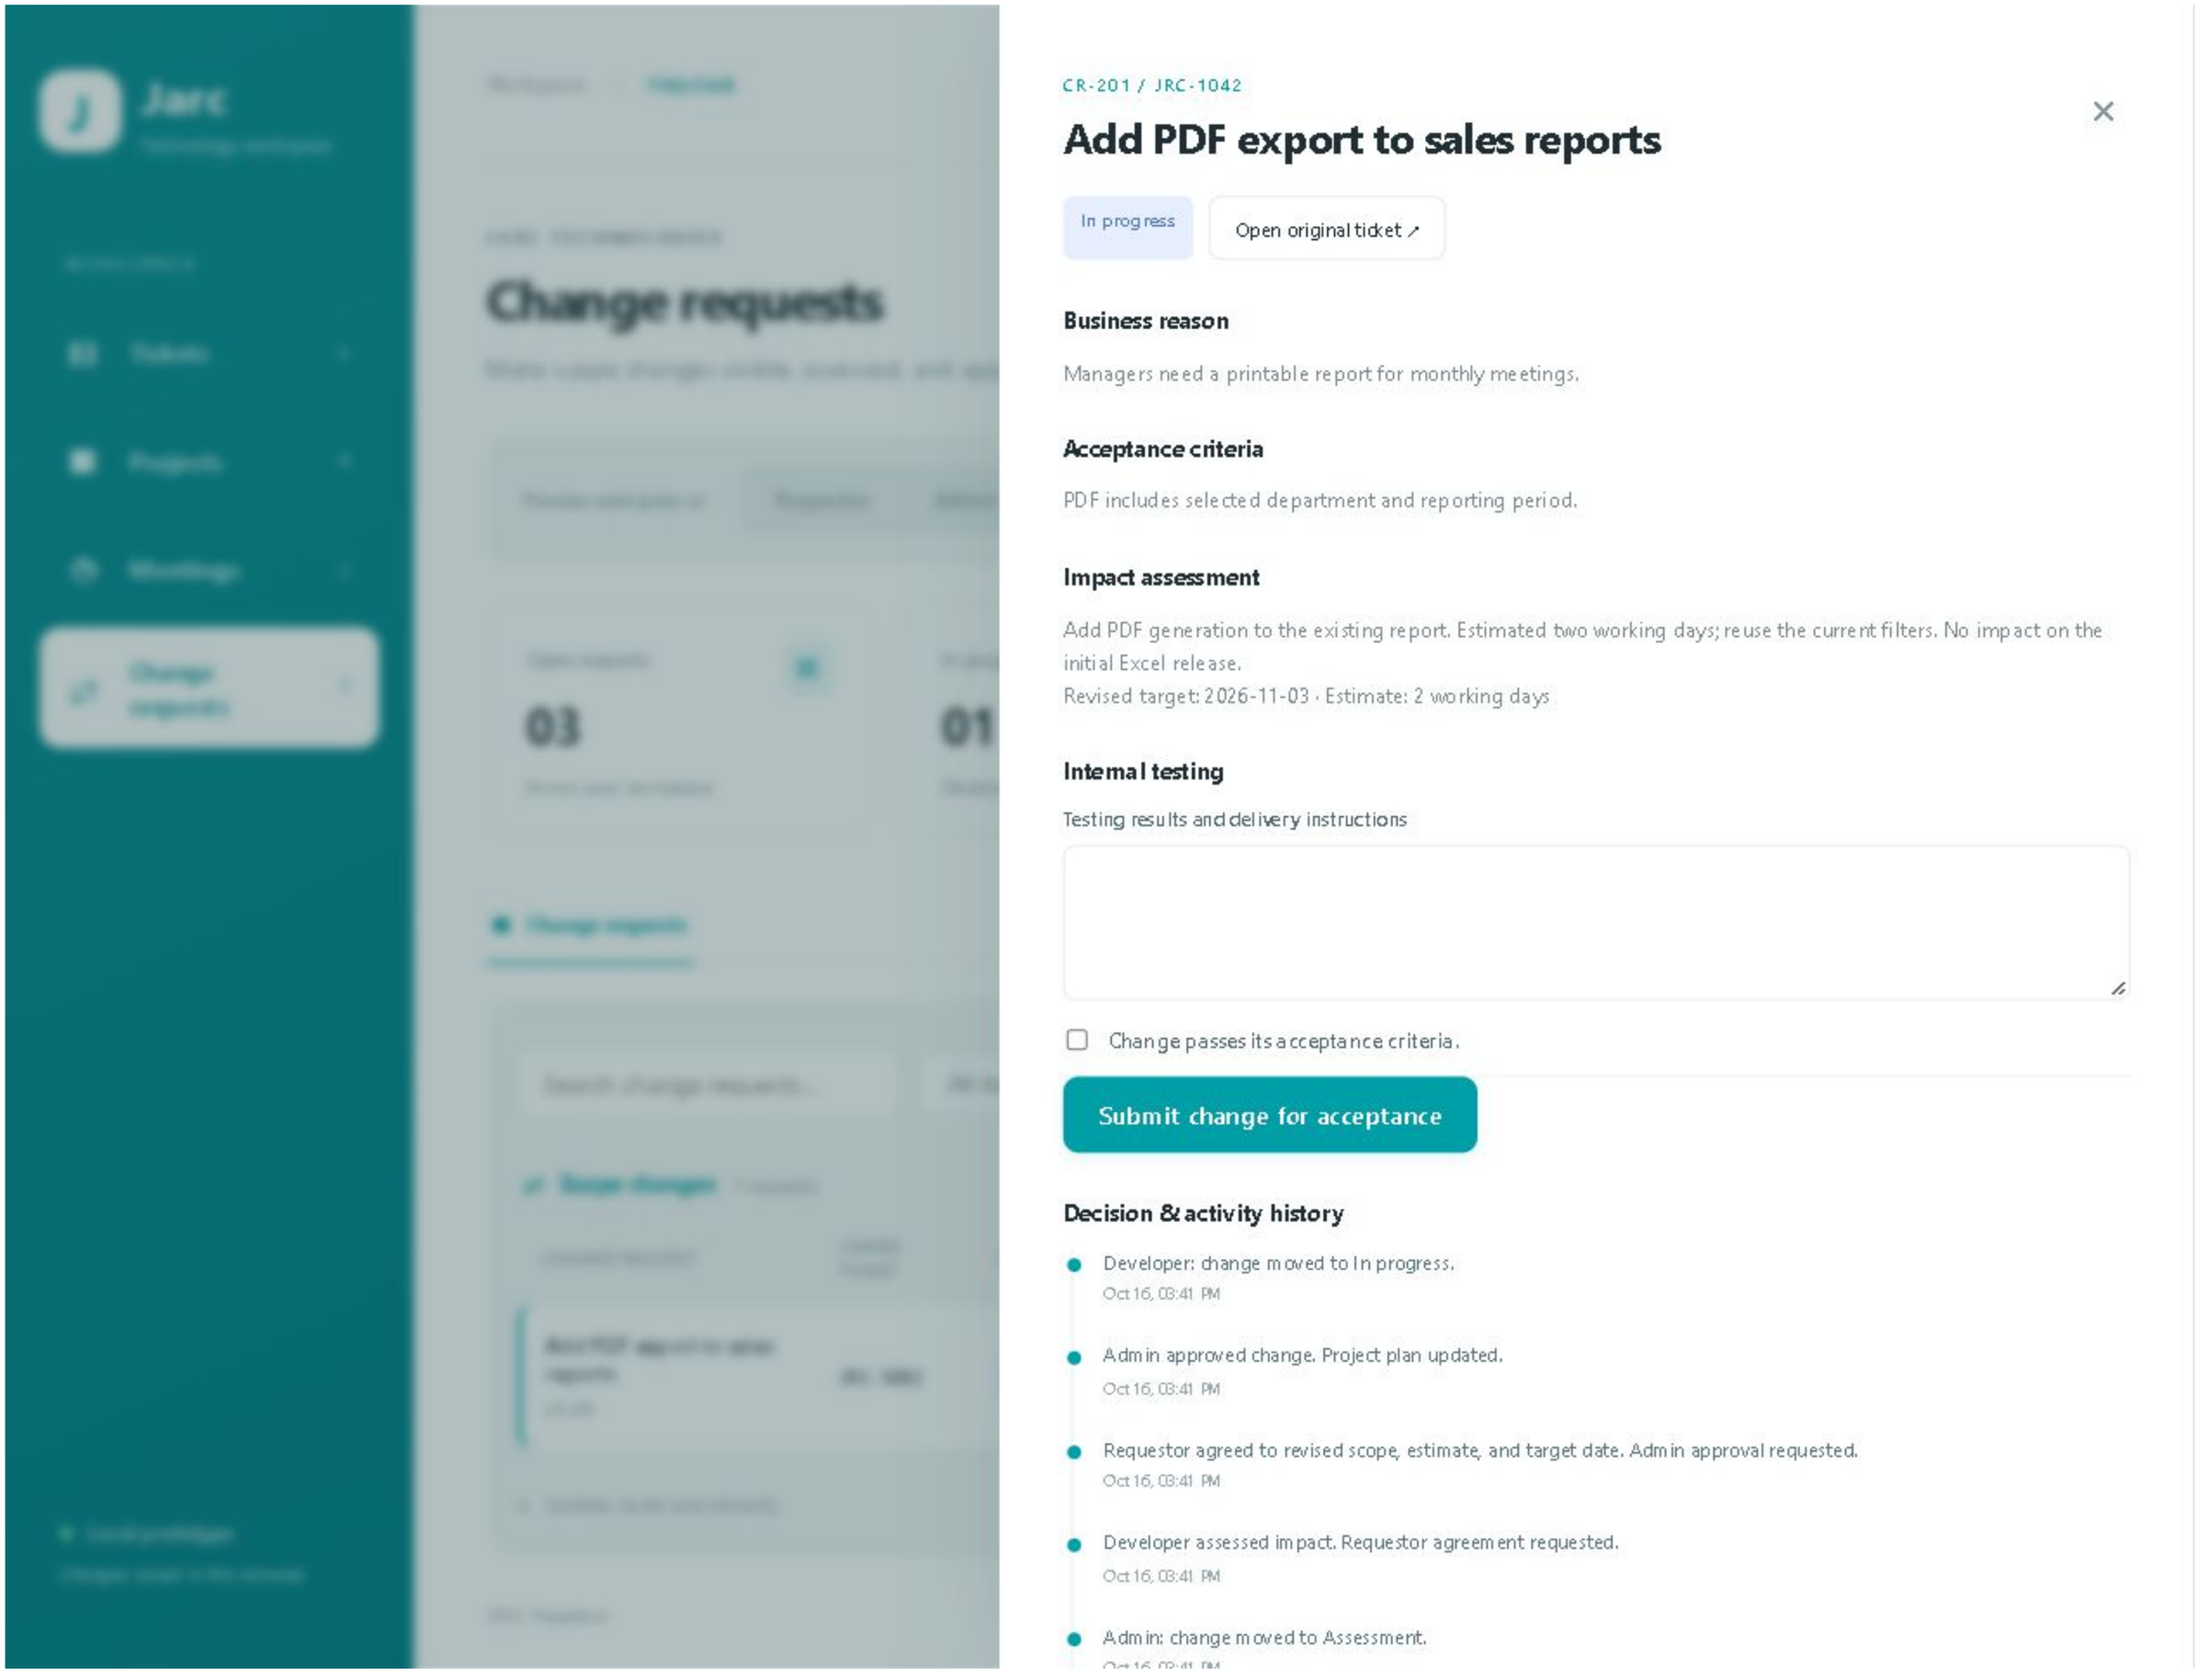

Developer | Approved change

LABELS & ACTIONS

Approved indicates admin authorization is complete. Start approved change begins implementation. The linked project now contains a task for this change.

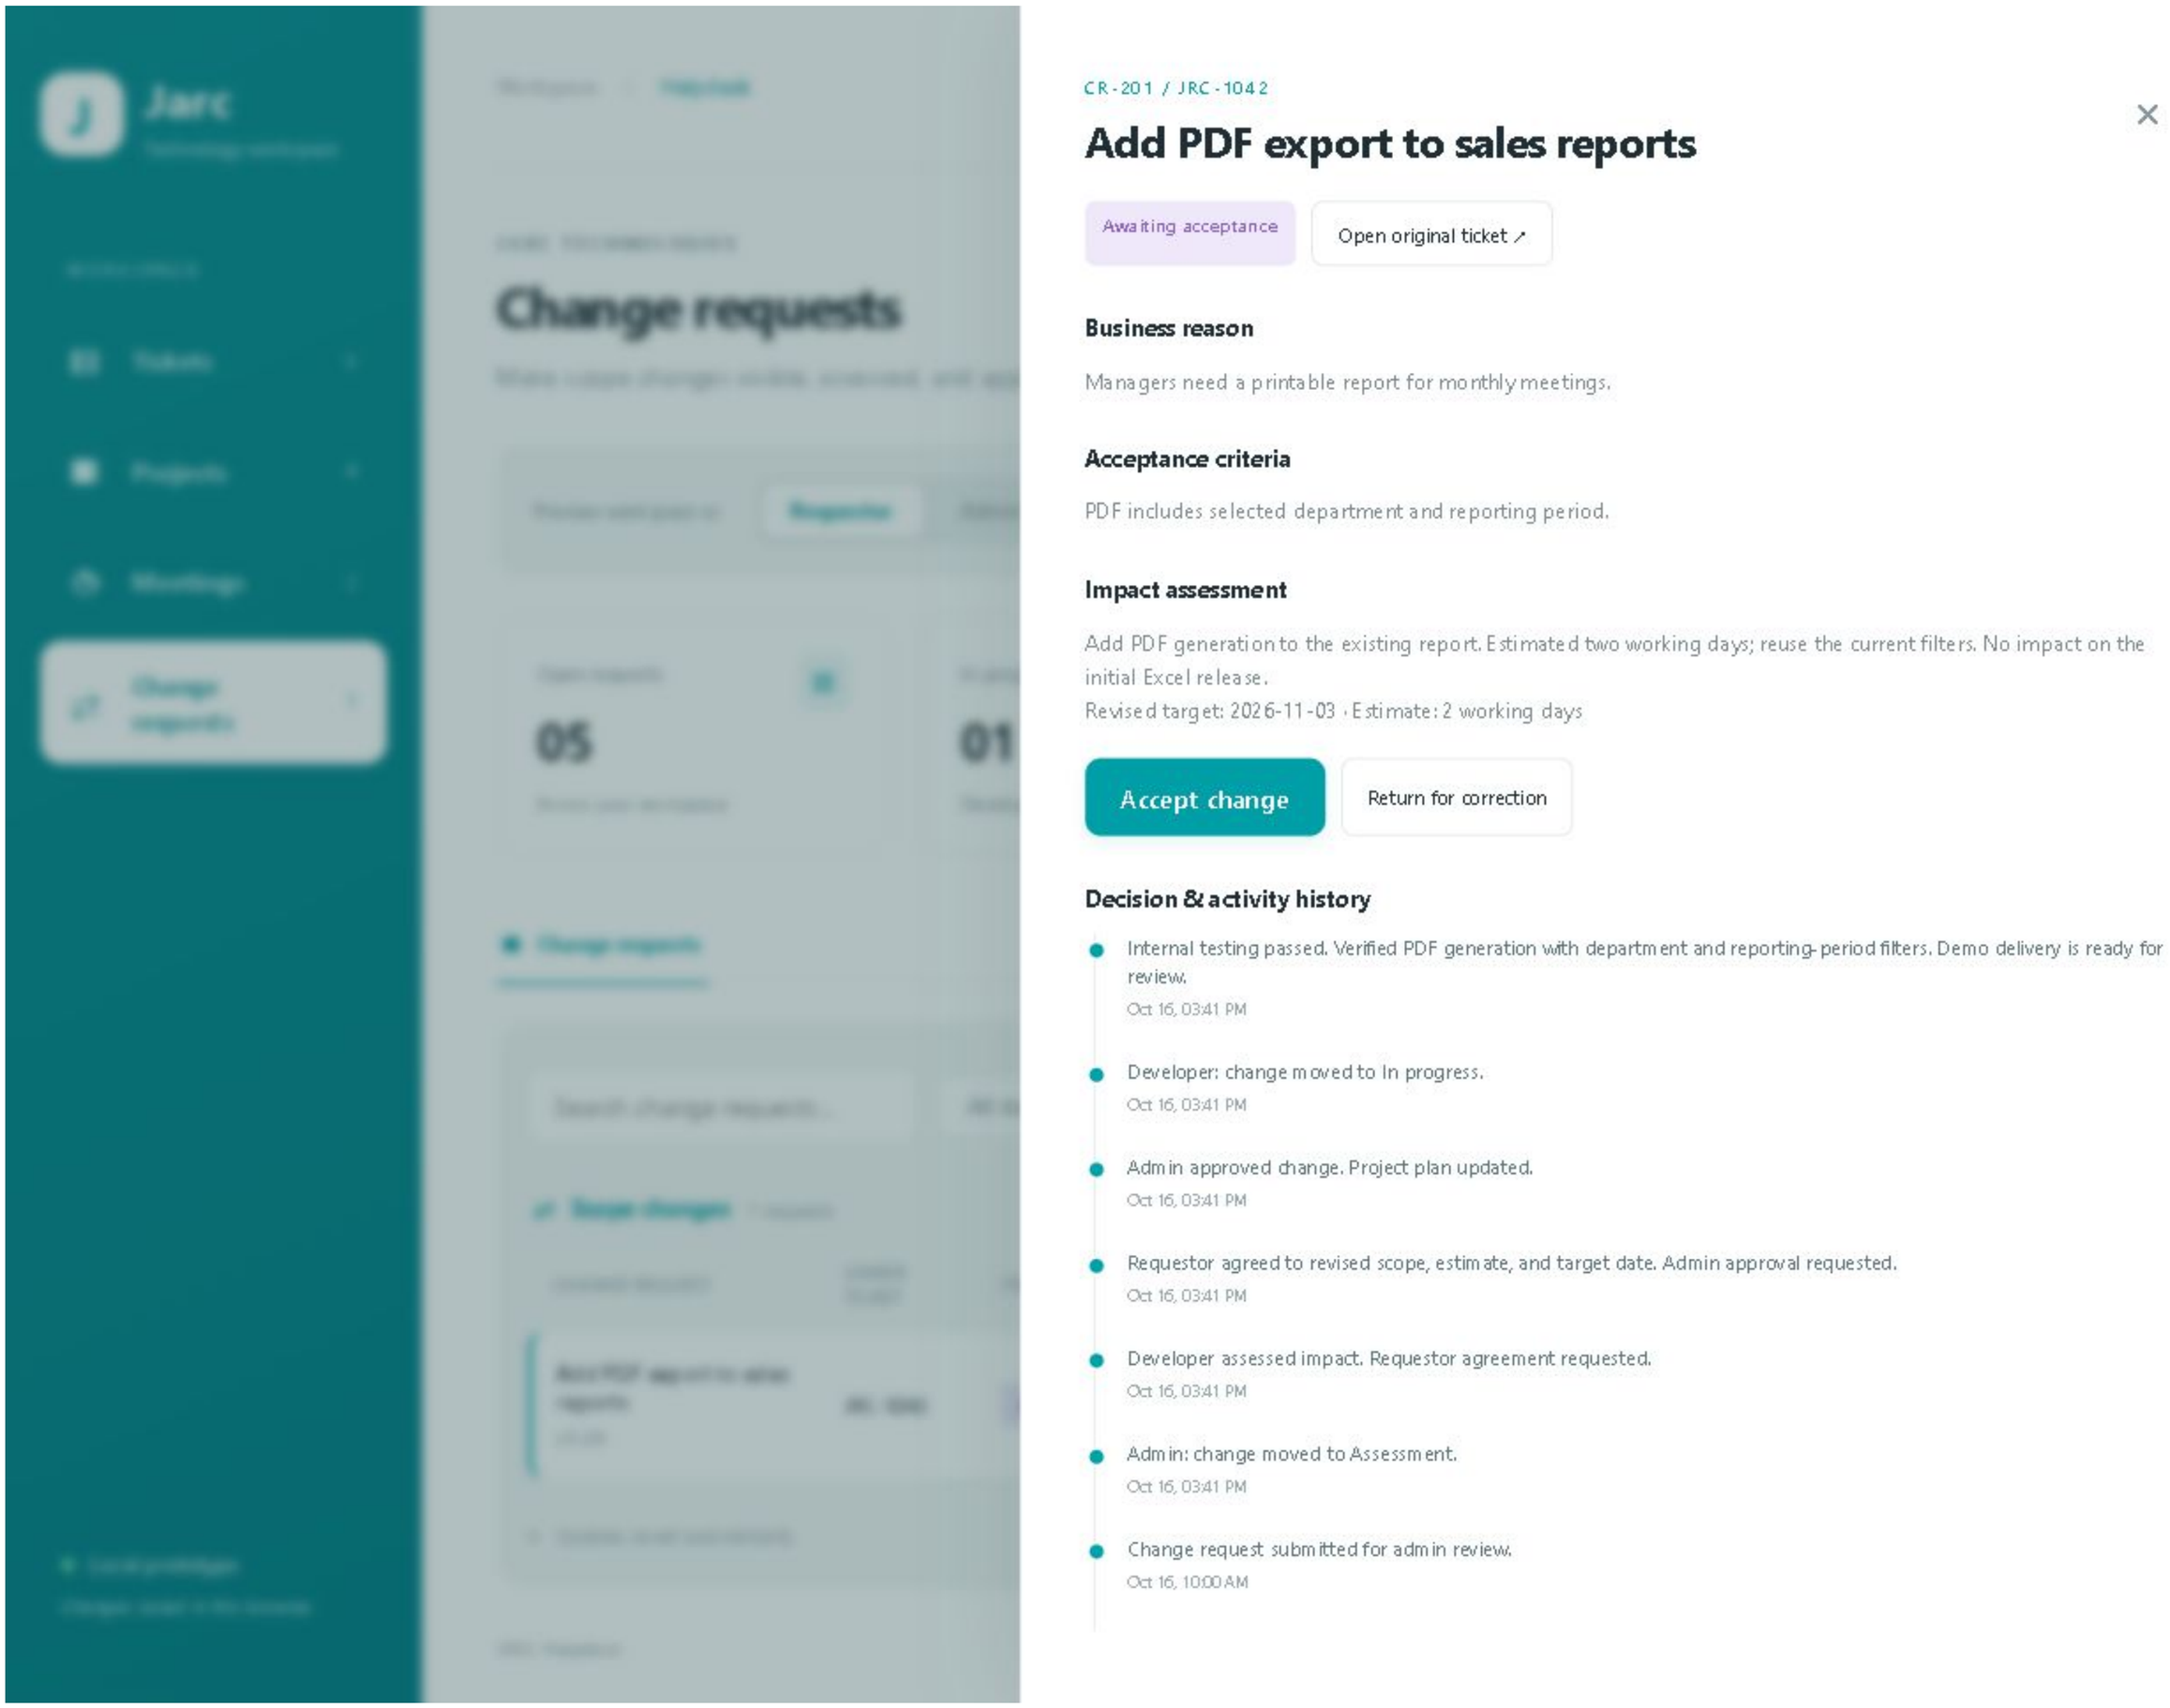

Developer | Change internal testing

LABELS & ACTIONS

Testing results and delivery instructions document the completed change. The acceptance-criteria checkbox confirms internal verification. Submit change for acceptance sends it to the requestor.

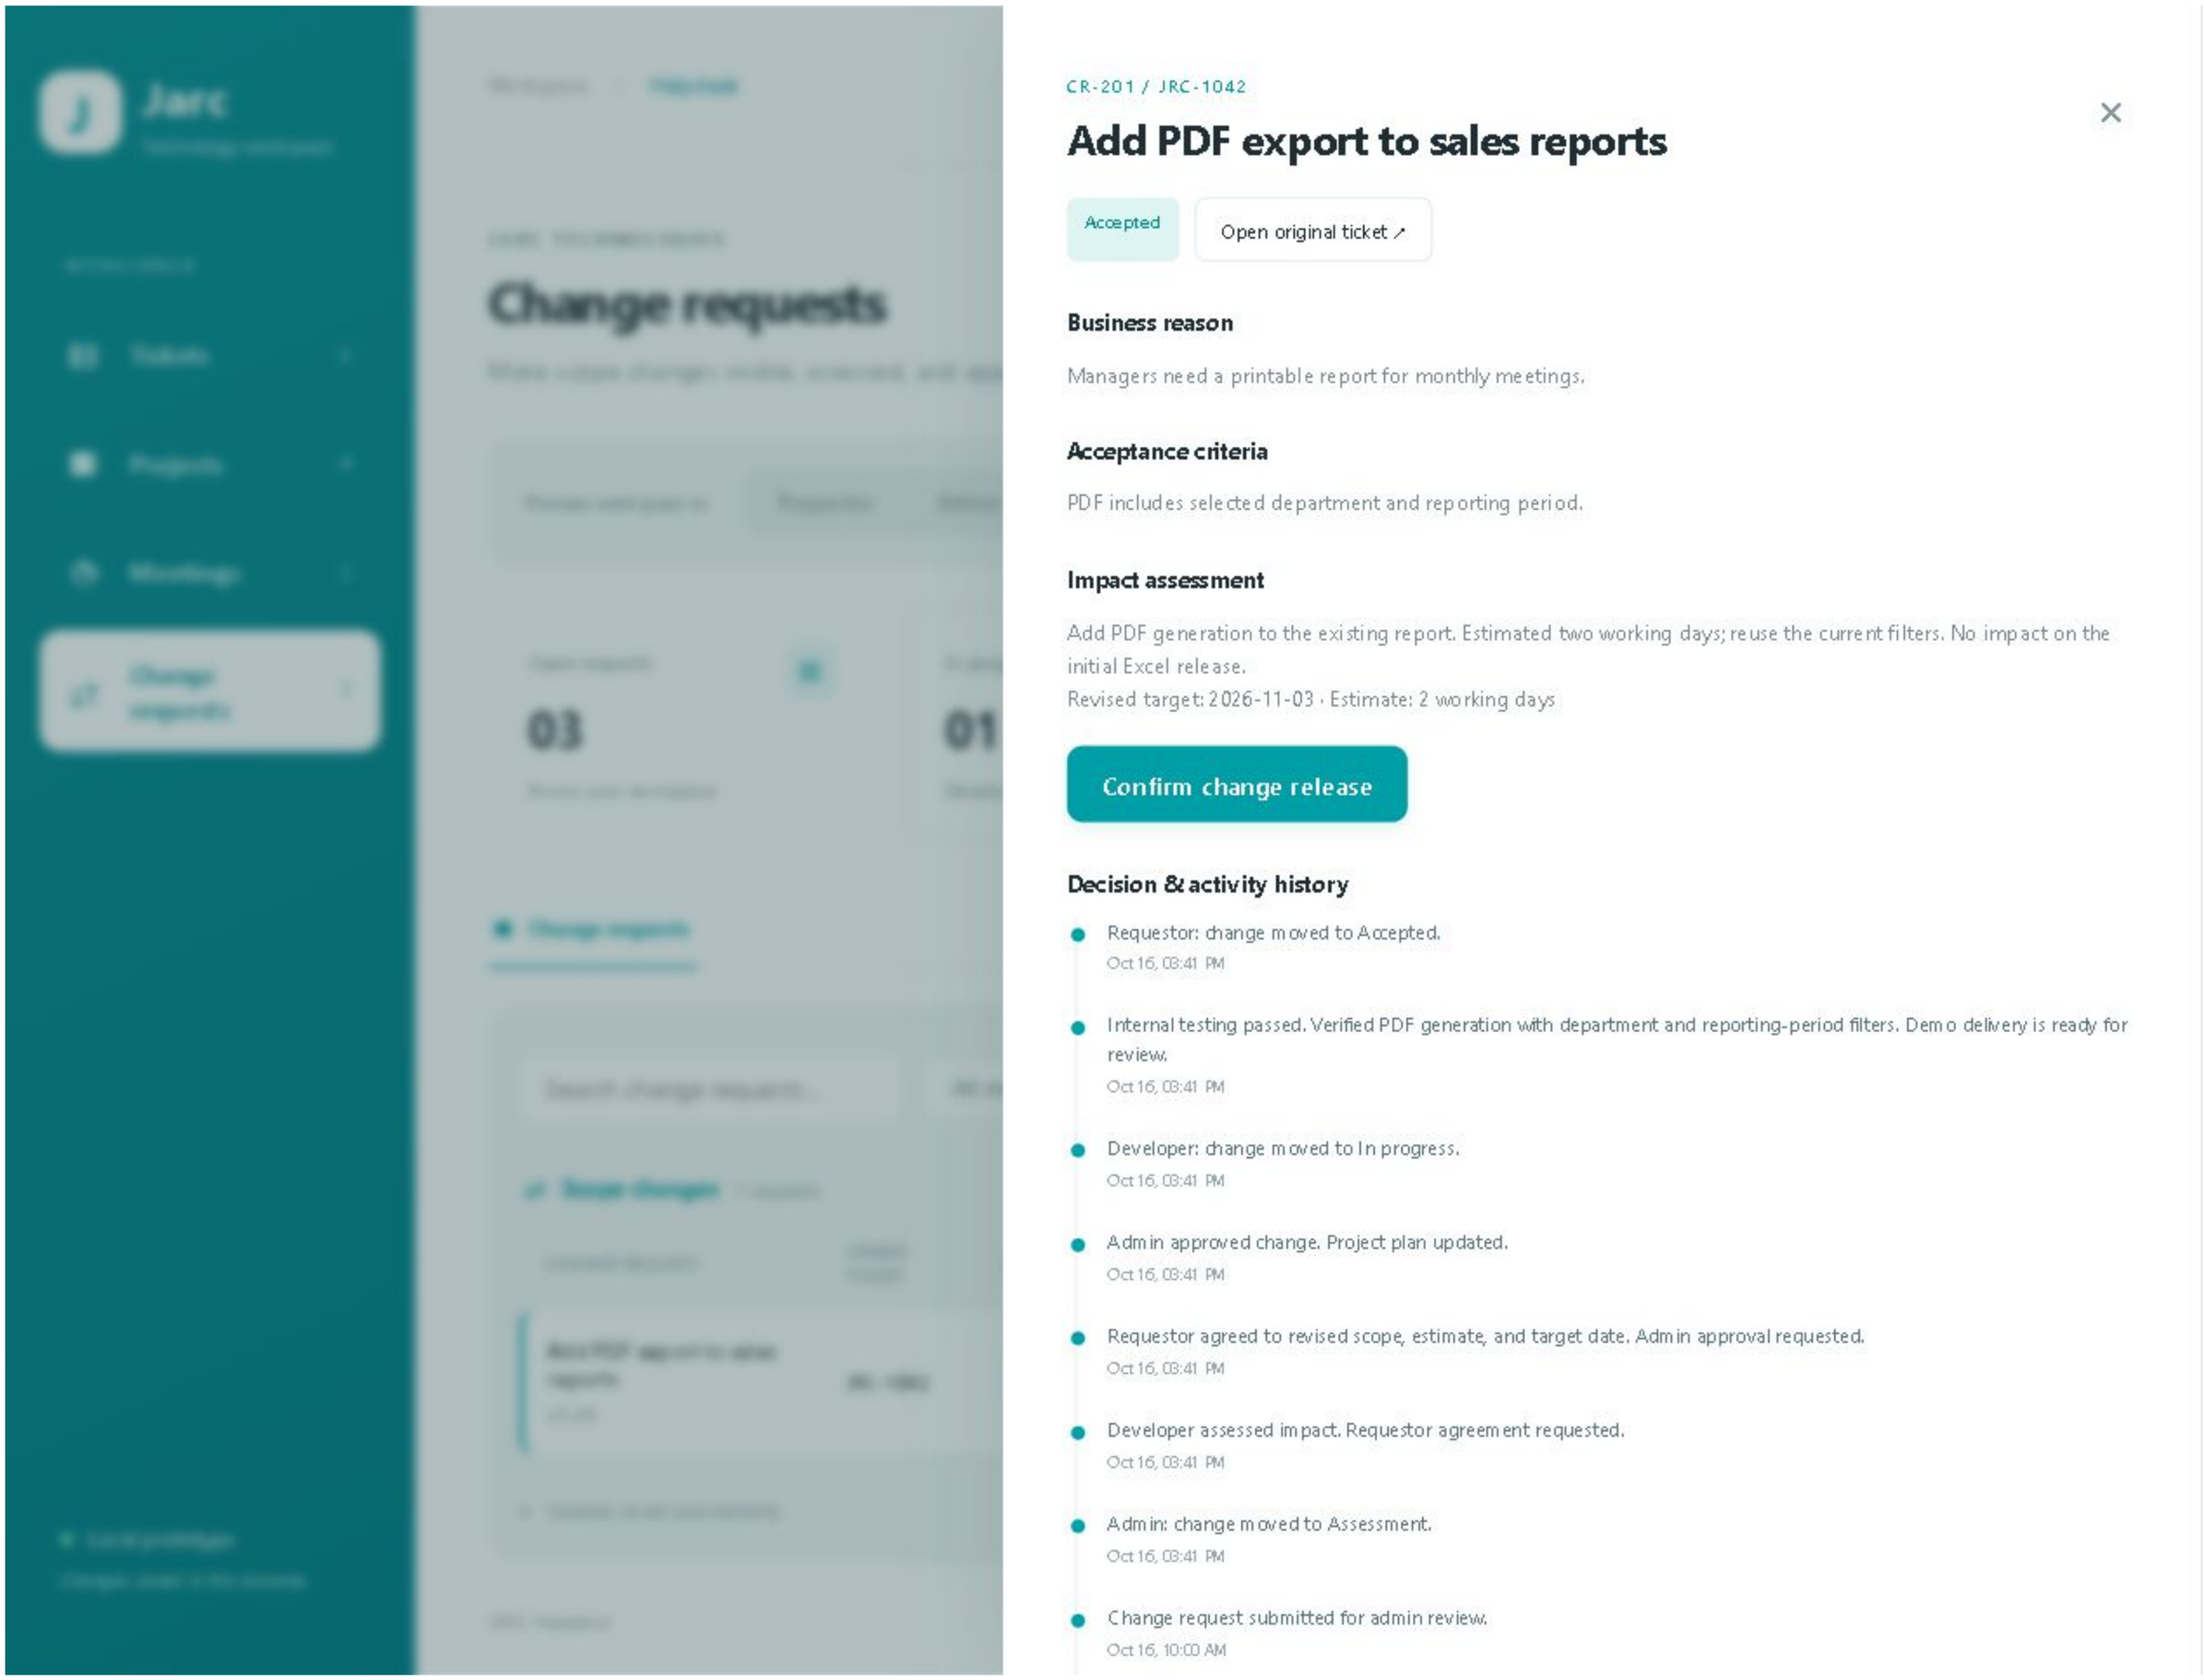

Requestor | Change acceptance

LABELS & ACTIONS

Accept change confirms the new acceptance criteria were met. Return for correction requires feedback and moves the change back to development.

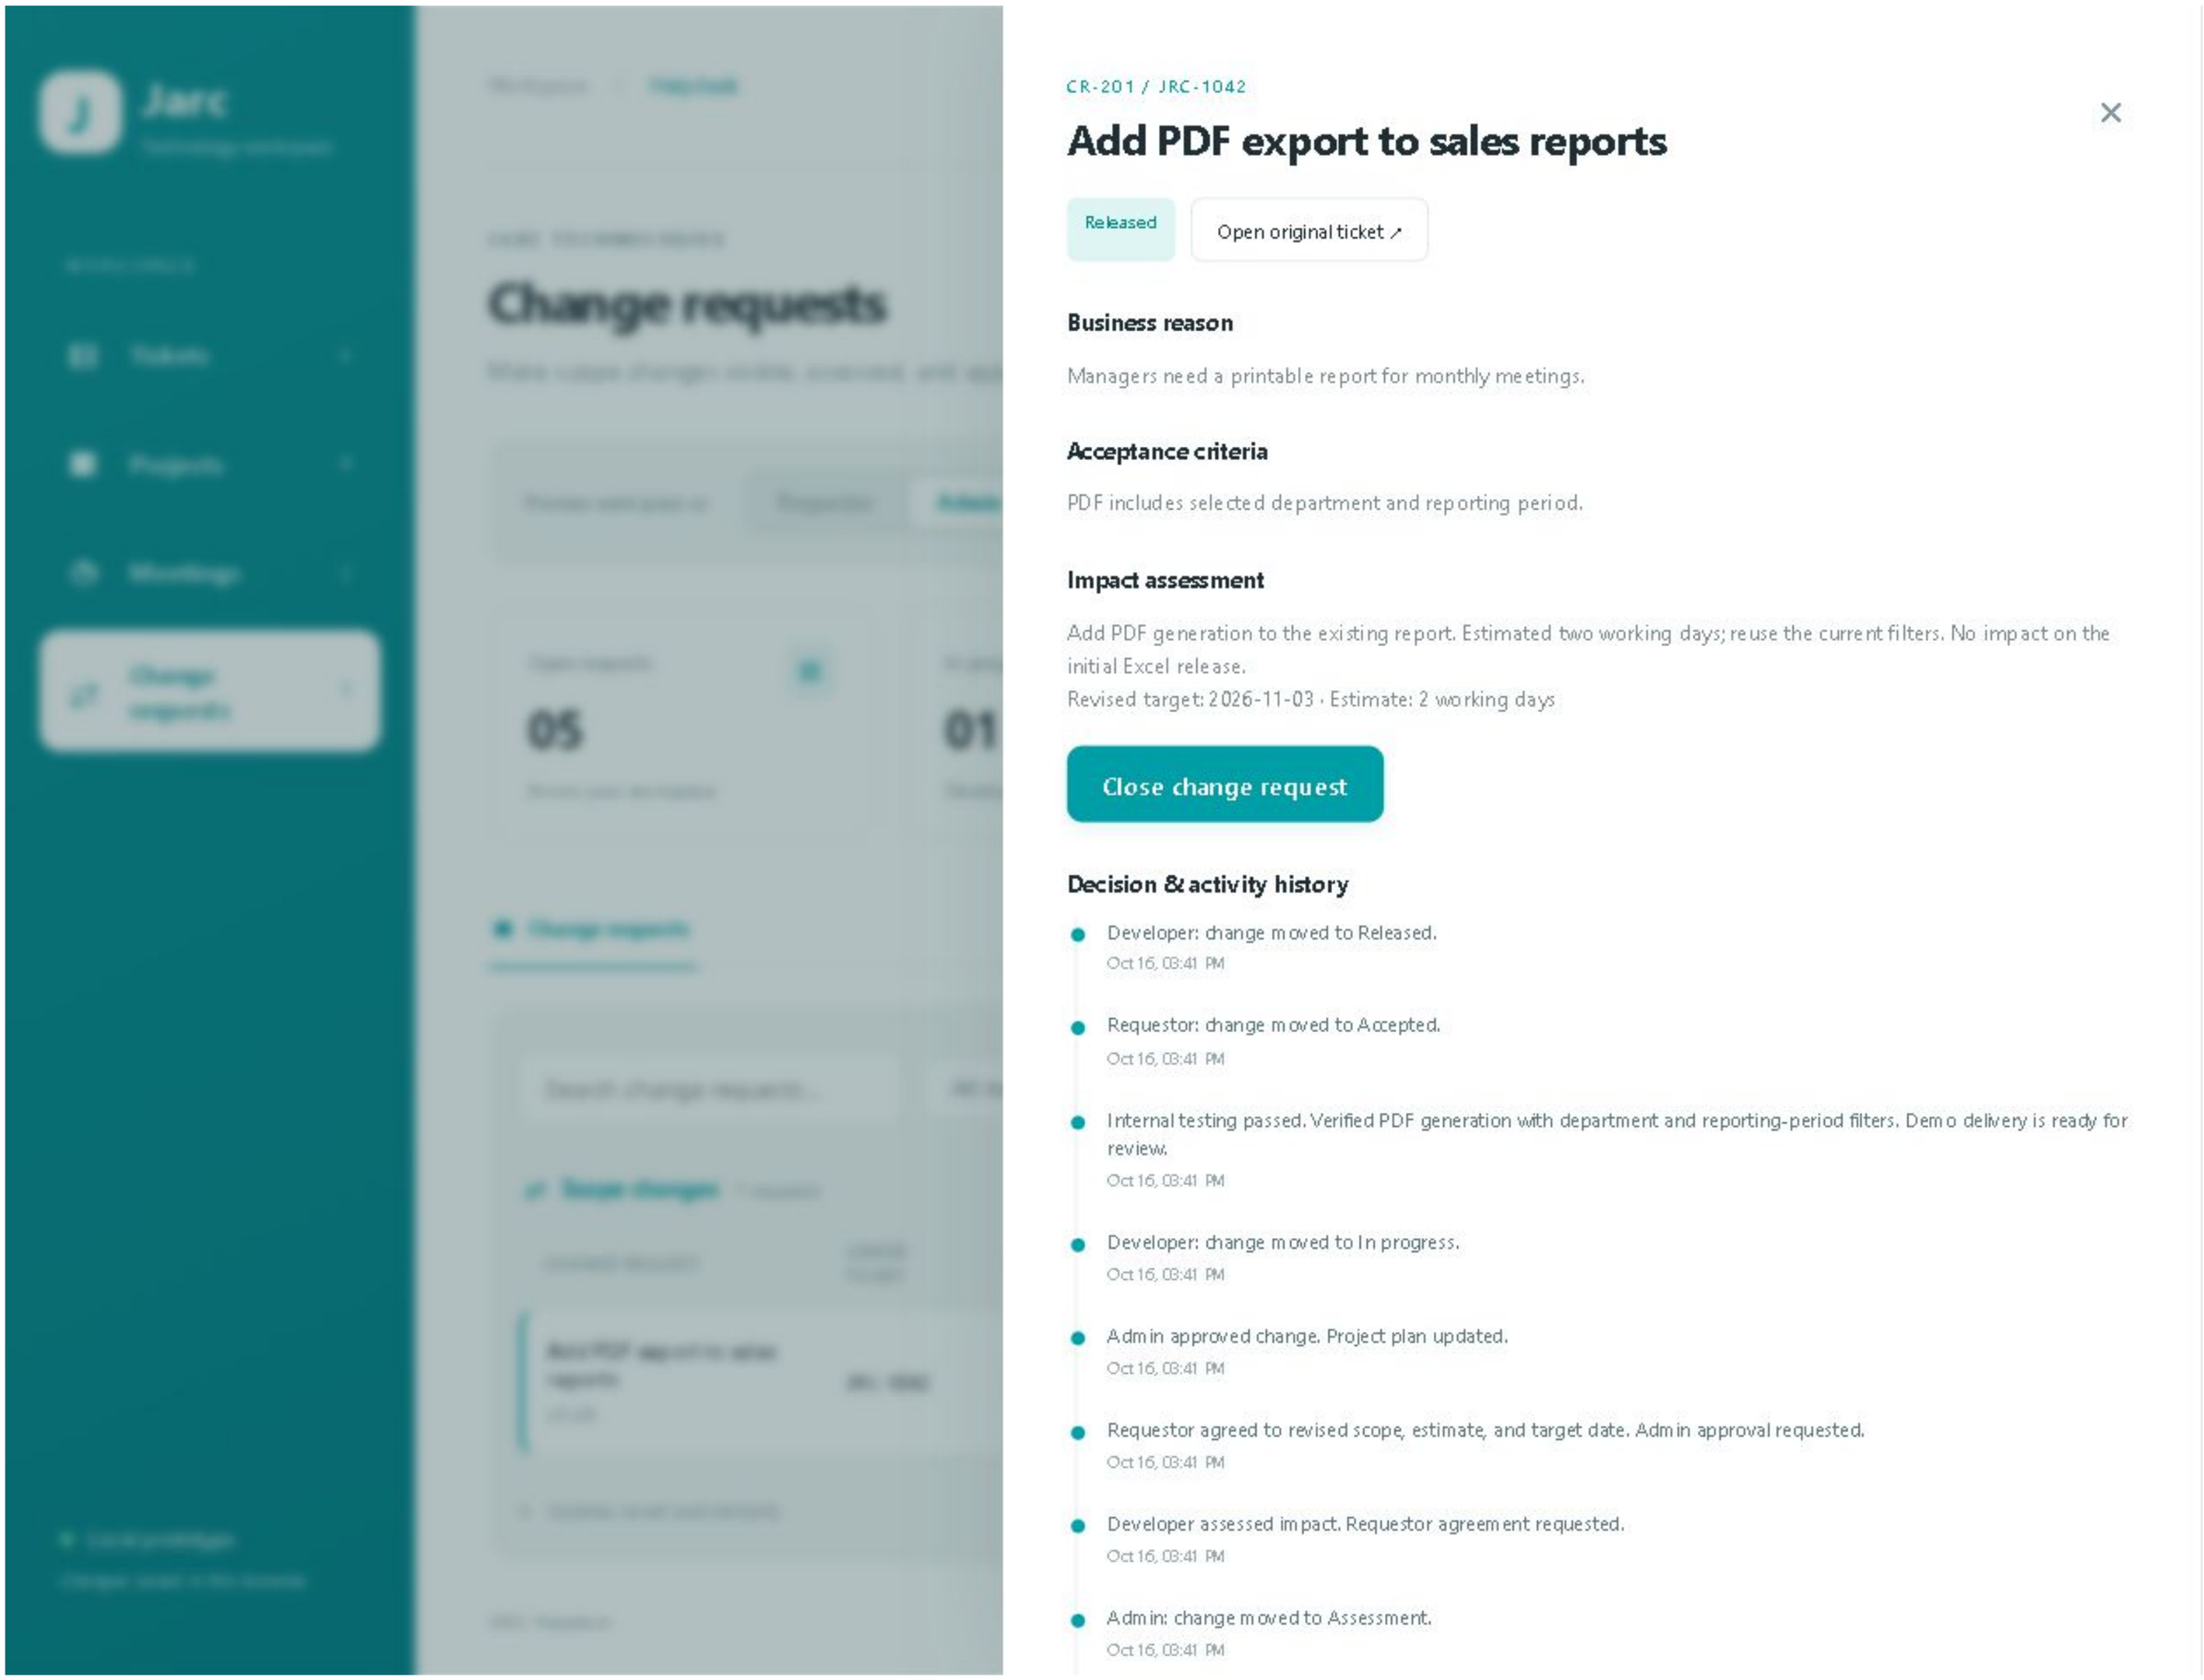

Developer | Change release

LABELS & ACTIONS

Confirm change release records that the accepted change has been released. Release precedes administrative closure.

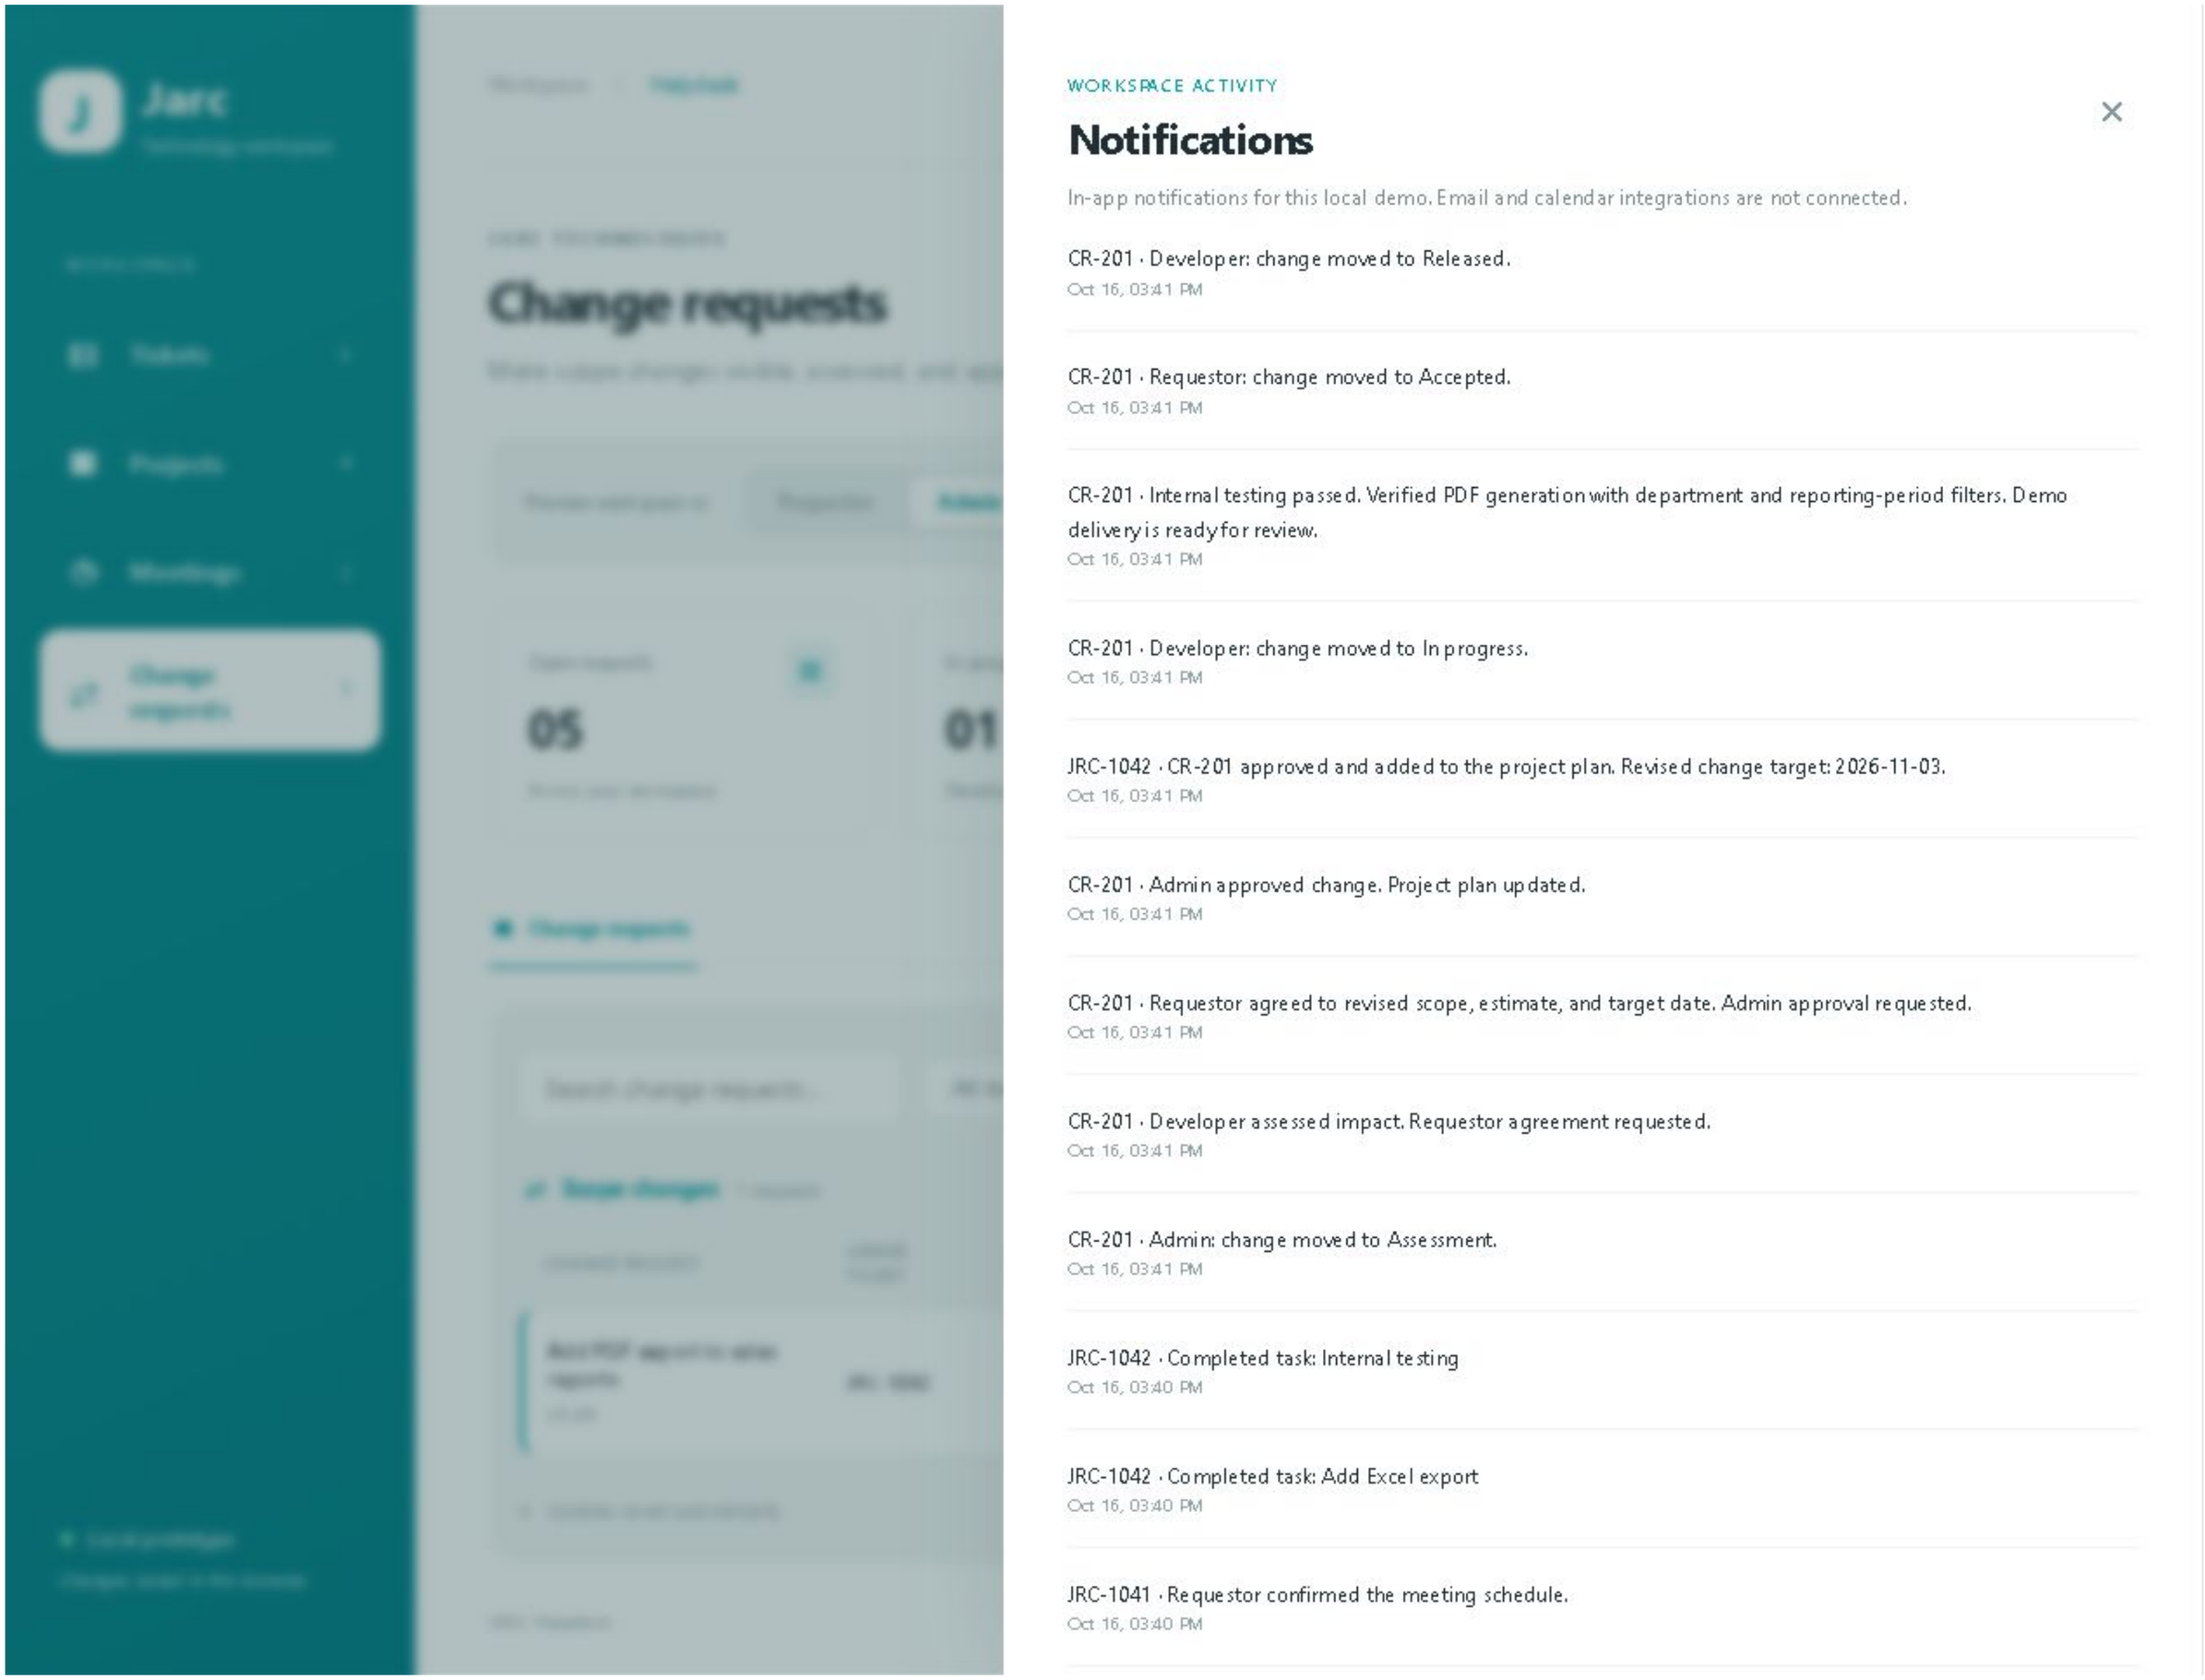

Admin | Change closure

LABELS & ACTIONS

Close change request completes the approved, accepted, and released change. Decision & activity history preserves the sequence of decisions.

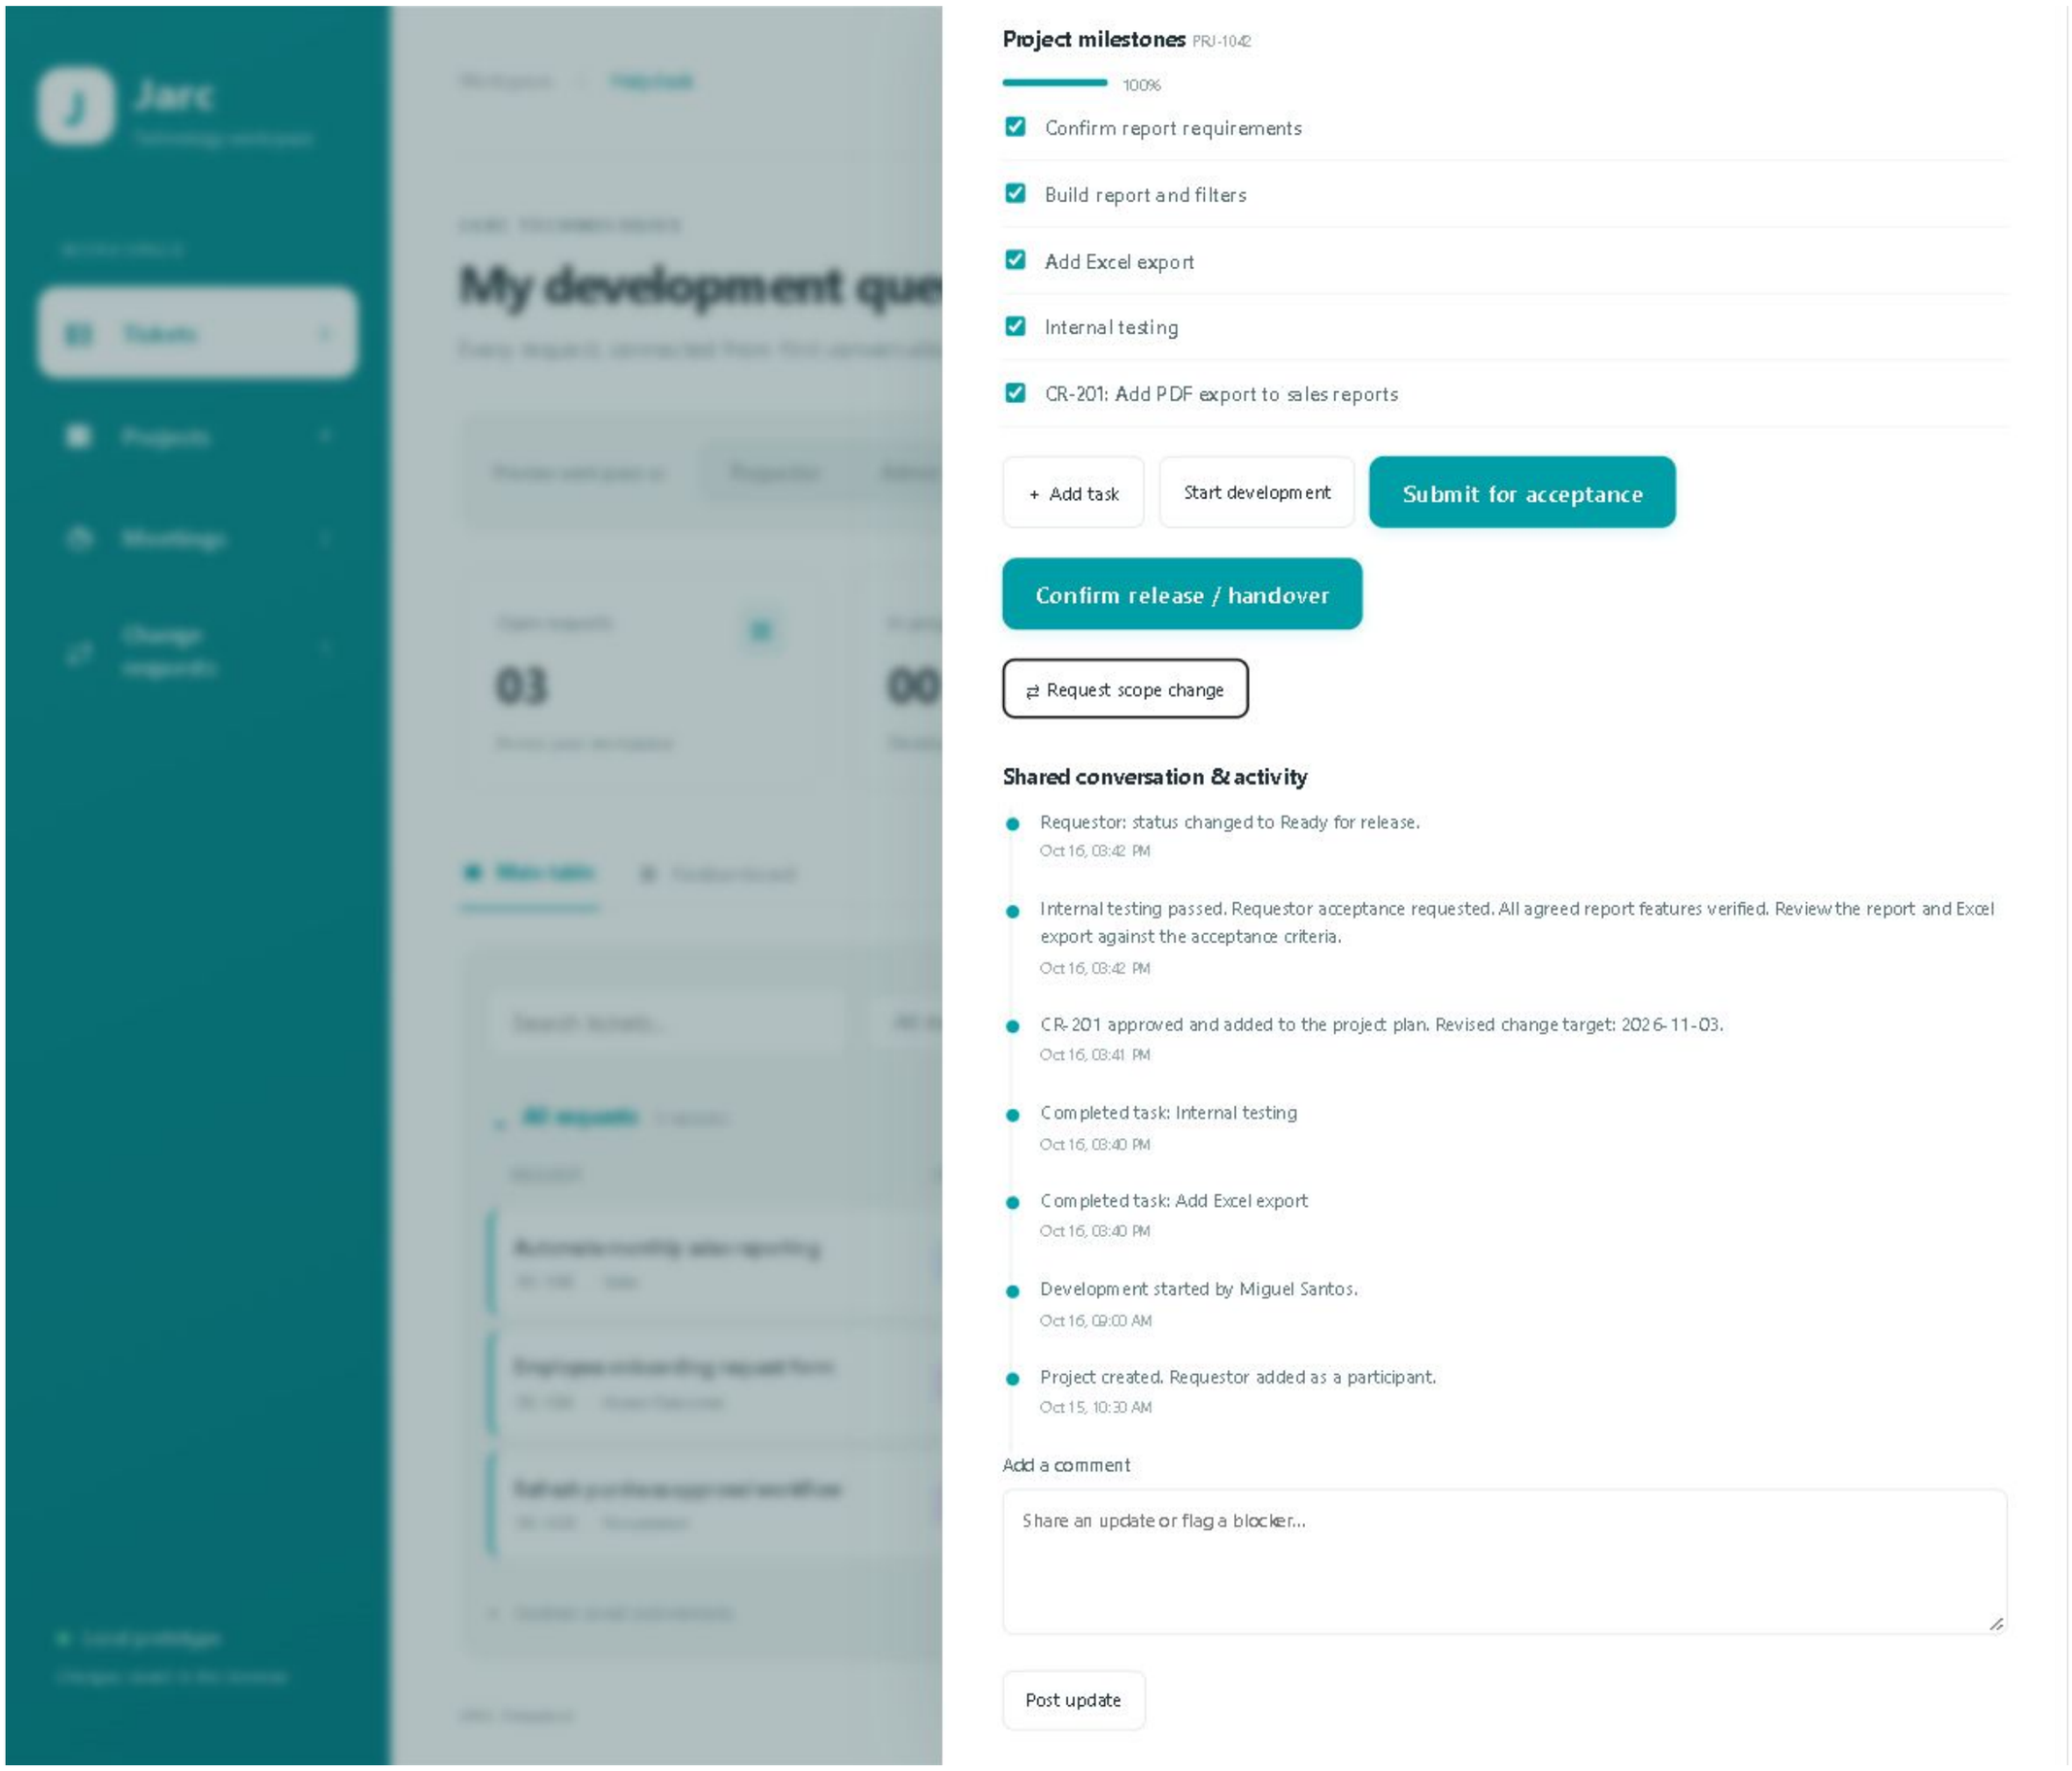

Shared | Notifications

LABELS & ACTIONS

Notifications lists ticket and change events, action requests, and timestamps. These are in-app demo notifications; email and calendar integrations are not connected.

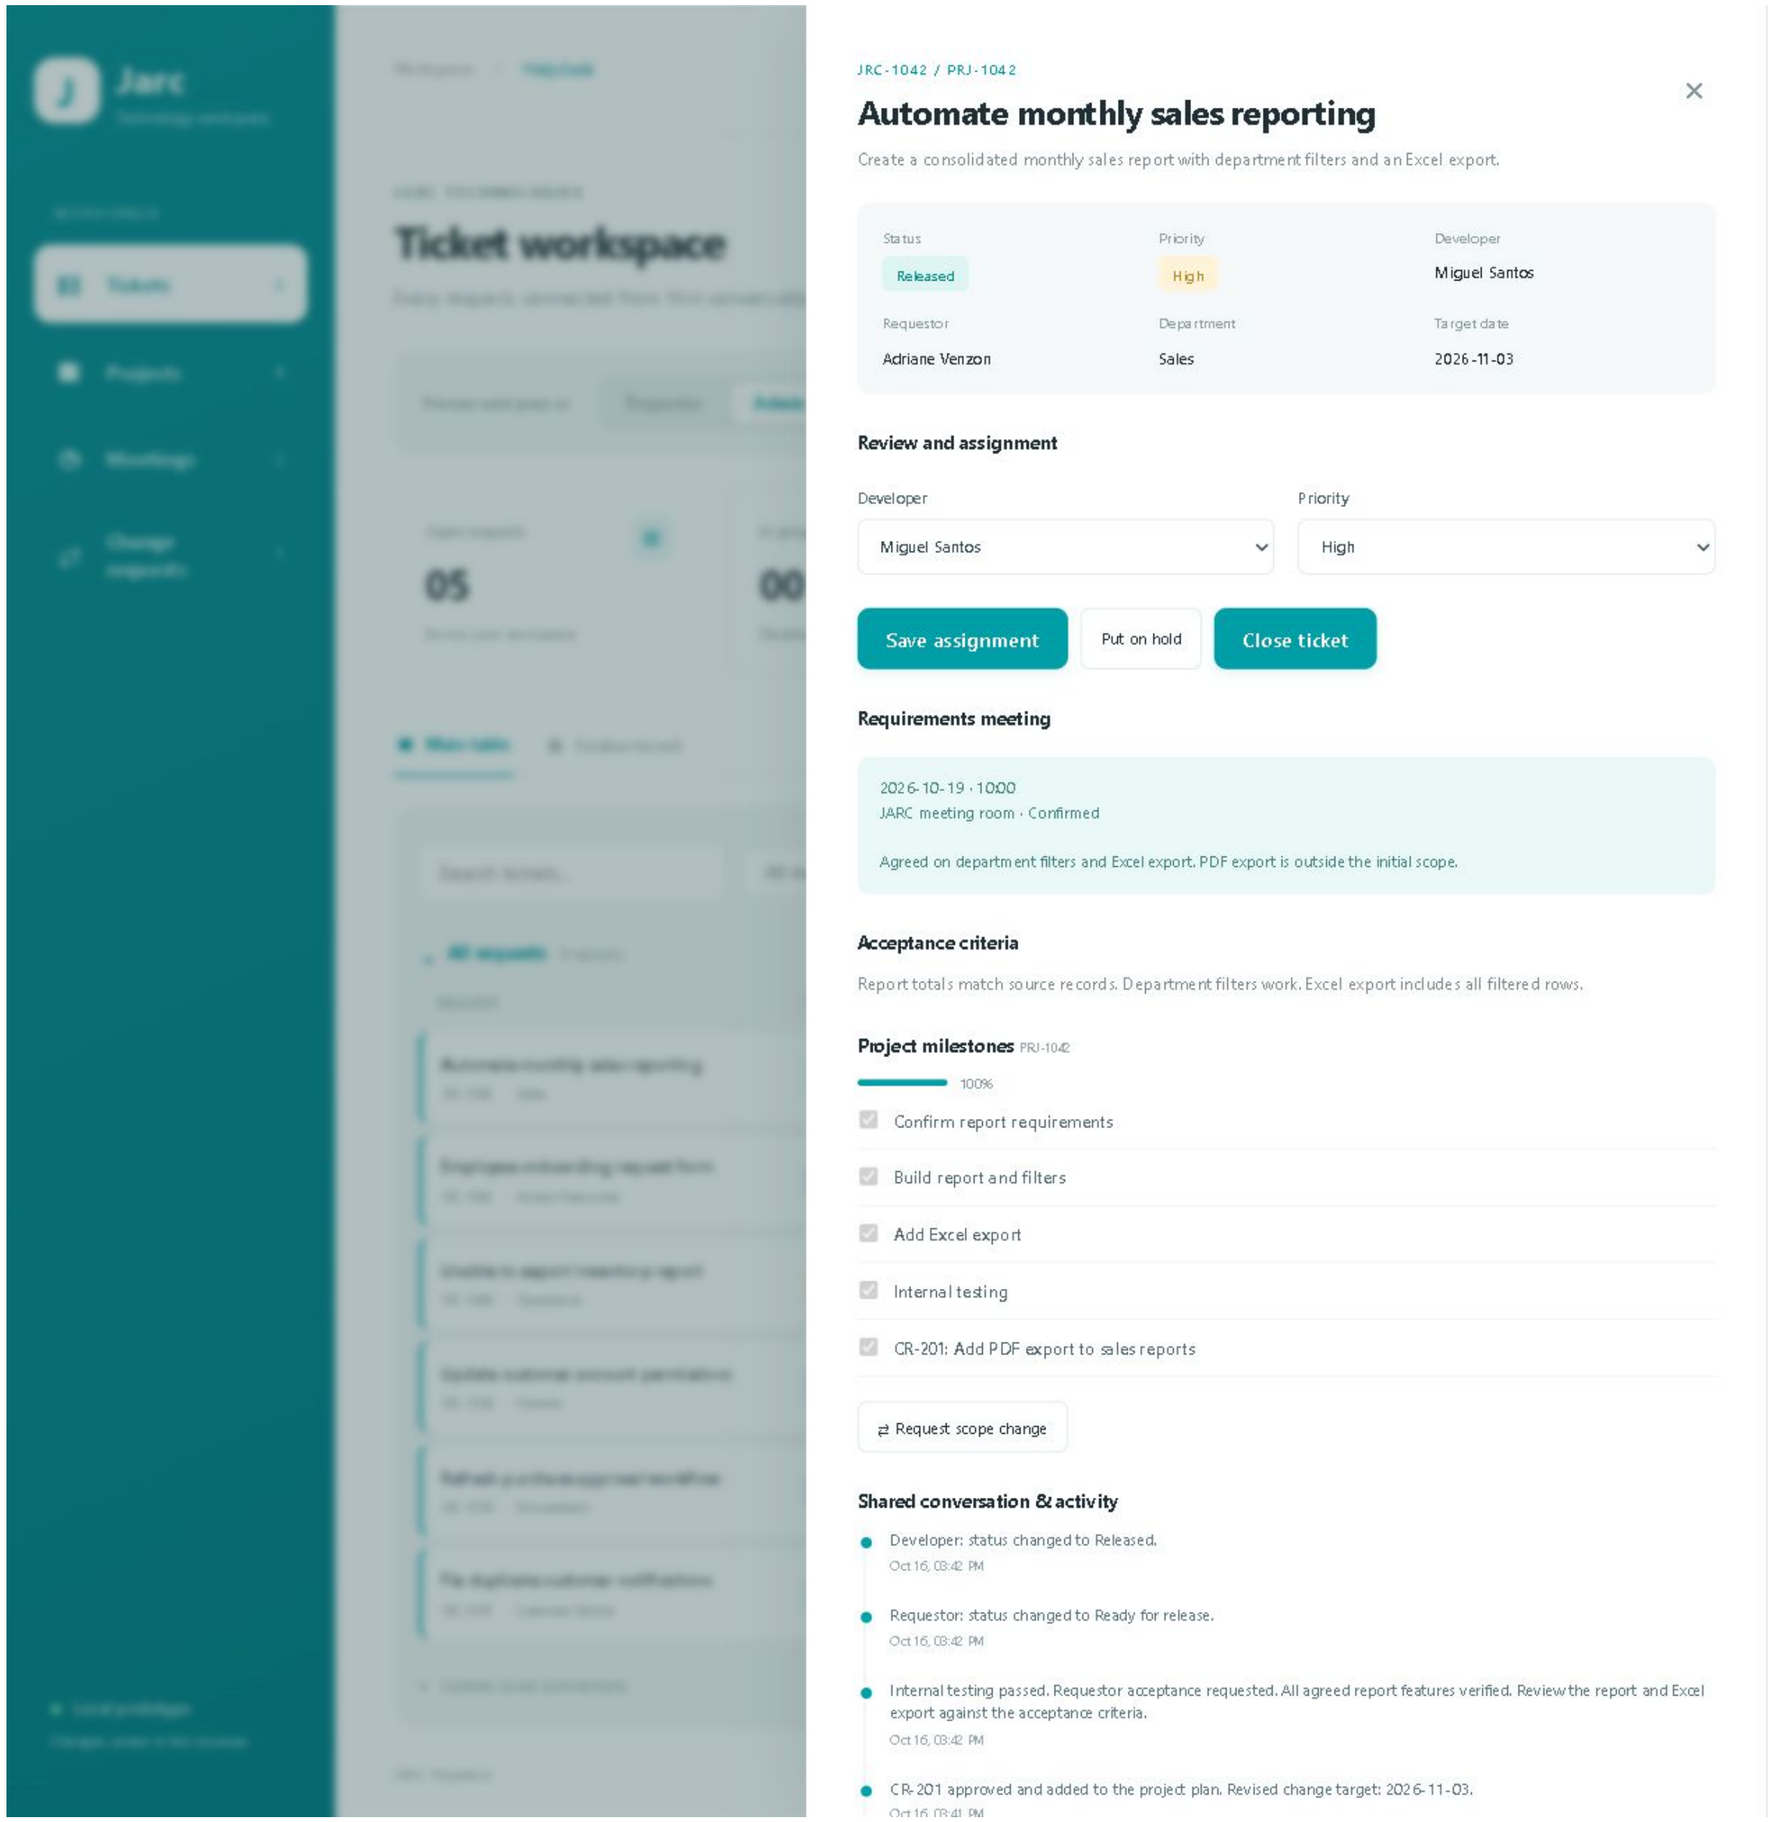

Developer | Ticket release and shared conversation

LABELS & ACTIONS

Confirm release / handover records delivery after requestor acceptance. Shared conversation & activity preserves updates and milestones. Add a comment and Post update let participants communicate.

Admin | Ticket closure

LABELS & ACTIONS

Released confirms handover has occurred. Close ticket completes the original request and notifies the requestor. The linked project, criteria, and activity remain available for reference.
